LETTER OF TRANSMITTAL.

Dr. Eugene Haanel,
Director Mines Branch,
Department of Mines,
Ottawa.

SIR,-

I beg to hand you, herewith, the Annual Report on the Mineral Production of Canada, giving revised statistical information descriptive of the mining and metallurgical production in Canada during the calendar year 1916.

A preliminary report on the mineral production during 1916 was sent to press February 28, 1917, and issued within the following week.

Parts of the present report—including "Report on the Production of Iron and Steel in Canada during 1916;" "Report on the Production of Copper, Gold, Lead, Nickel, Silver, Zinc, and other Metals, in Canada, during 1916;" "Report on the Production of Coal and Coke in Canada, during 1916;" and "Report on the Production of Cement, Lime, Clay Products, Stone, and other Structural Materials in Canada, during 1916," have already been separately published.

In the preparation of this Report, Mr. A. Buisson has again contributed largely to the compilation of the special chapters on gold, silver, copper, lead, nickel, zinc, and miscellaneous metallic minerals. Mr. J. Casey has not only given particular care to the compilation of the statistical tables, but has also contributed the section on "Cement, Lime, Clay Products, and Other Structural Materials."

Grateful acknowledgment is made of the hearty co-operation of mine and smelter operators who have almost without exception cheerfully complied with our requests, and furnished the department with statistics and information regarding their operations.

> I have the honour to be, Sir, Your obedient servant, (Signed) John McLeish.

Division of Mineral Resources and Statistics, October 27, 1917.

MINERAL PRODUCTION, OF CANADA— General Summary.— Mineral Production in Canada, 1915 and 1916, comparative table General table of exports and imports	13 18 22 28
Mine production	40
METALLIC ORES. ALUMINIUM.— Imports and exports	33
Antimony.— Production in Canada: exports and imports	35
Cobalt.— Production in Canada	38
COPPER.— Production in Canada; prices, exports and imports; production in Nova Scotia, Quebec, Ontario, British Columbia, and Yukon; operating companies	40
Gold.— Refined metal—Production in Canada, production in Nova Scotia, Quebec, Ontario, Alberta, British Columbia, and Yukon; operating companies	50
Iron.— Iron ore: production in Canada and by provinces; list of operators; exports and imports. Pig-iron and steel: production in Canada and by provinces; ferro-products; exports and imports; operating companies	63 72
Lead.— Production in Canada; refined pig lead; prices, bounties, exports and imports; production in Ontario and British Columbia	113
Mercury.— Production in Canada; imports	123
Molybdenum.— Production in Canada	124
NICKEL.— Production in Ontario; exports and imports; prices	129
PLATINUM AND PALLADIUM.— Production in Canada; imports	135
SILVER.— Production in Canada; prices; refined silver; production in Quebec, Ontario, British Columbia, and Yukon	138
Tin.— Imports	146

Tungsten.— Production in Canada,	PAGE 148
ZINC.— Production in Canada; imports, prices	150
NON-METALLIC PRODUCTS.	
Abrasive Materials: Production, Exports and Imports.— Corundum: Ontario	159 160 163
ACTINOLITE	166
Arsenic.— Production; imports and exports	167
Asbestos.— Production in Quebec, prices, exports and imports; world's production; list of operators. BARYTES.	170 176
Chromite.— Production in Quebec, exports; consumption in United States; list of operators	178
COAL.— Production in Canada, exports and imports, consumption; production in Nova Scotia, New Brunswick, Saskatchewan, Alberta, British Columbia, and Yukon	181
Production in Canada, exports and imports; production in Nova Scotia, Ontario, Alberta, and British Columbia.	222
FELDSPAR.— Production in Canada, exports, operating companies	227
FLUORSPAR.— Production; imports of hydrofluosilicic acid	229
Graphite.— Production in Canada, exports and imports; list of operators; artificial graphite	231
Gypsum.— Production in Canada, exports and imports; production in Nova Scotia, New Brunswick, Ontario, and Manitoba; operating companies	236
MagnesiteMagnesium sulphate	242 243
Manganese.— Production; exports and imports	244
MICA.— Production in Quebec, and Ontario; exports; consumption in United States, operating companies	248
MINERAL PIGMENTS.— Ochres; production, exports and imports	252
Mineral Water	254
NATURAL GAS.— Production in New Brunswick, Ontario, and Alberta	256
Реат	258

	PAGE
Petroleum.— Bounty; production in Ontario, and New Brunswick; refined oils inspected; exports and imports	259
PHOSPHATE.— Production in Quebec and Ontario; exports	268
Pyrites.— Production in Quebec and Ontario; exports; imports of brimstone and sulphur; operators Sulphuric acid, production; imports and exports	270 272
QUARTZ.— Production; imports of silex. Grinding pebbles.	275 276
Salt.— Production in Ontario; exports, imports, and consumption; operating companies	277
Talc	282
STRUCTURAL MATERIALS AND CLAY PRODUCTS. CEMENT.— Production; exports, imports, consumption; operating companies	286
CLAY PRODUCTS.— Building, paving and ornamental brick; fireclay, and fireclay products; pottery, sewerpipe, tiles, etc.; production, exports and imports	297
Lime.— Production by provinces; exports and imports	321
SAND-LIME BRICK.— Production	326
Sand and Gravel.— Production, exports and imports	327
SLATE.— Production, exports and imports	331
Stone.— Granite and other igneous rocks, limestones, marble, and sandstone production, exports and imports	333

EXPLANATORY NOTES.

The term "ton" used throughout this report signifies a ton of 2,000 pounds; while the year referred to means calendar year, unless otherwise stated. The Government fiscal year formerly ended on the 30th of June; but now terminates on the 31st of March. This change took place in 1907, hence the fiscal period ending March 31, 1907, covers only nine months.

Statistics of exports and imports given throughout this report are compiled from the reports of Trade and Navigation, published by the Customs Department.

The term "production" used throughout this report may in general be interpreted as meaning the quantity sold or shipped. Mineral products mined or manufactured, but not sold or shipped, at the end of the year, are not included as "production." An exception to this usage will be found in reference to pig-iron, in which case the statistics of production represent the quantities made.

The value of the metallic minerals produced, whether refined in Canada or not, is calculated on the basis of the average price of the metal in some recognized market. New York prices have usually been taken as the standard, except in the case of lead, for which the Montreal price is now used. The value of non-metallic products is given as at the mine or point of shipment.

THE

MINERAL PRODUCTION OF CANADA

During the Calendar Year

1916

General Summary

The term "mineral production" is so comprehensive that in general statistical compilations on the subject there is wide divergence in method in respect to the character of mineral products which shall be included; the adoption of a basis of valuation; and the period of time to be covered. These differences in methods, which have been the subject of discussion in previous reports, are the principal cause of most of the apparent discrepancies that are found in mining statistics emanating from different authorities.

A Preliminary Report on the Mineral Production of Canada in 1916 was published on February 28, subject to revision, in which the following general comments were made:—

"The war has had a most pronounced effect not only in stimulating the production of those metals such as nickel, copper and zinc, iron and steel, molybdenum, etc., which are used so extensively for war purposes, but also in increasing the production of other products such as chromite and magnesite which can only now be obtained with difficulty if at all from sources previously available. The general industrial activity in metallurgical operations and in the manufacture generally of munitions of all kinds, including freight movements required, have in turn increased the demand for fuel which has been met in western Canada at least by large increases in coal production."

"Increased production in quantity has in most instances been accompanied by large increases in prices, thus further enhancing the total value of the production."

"Considerable progress has been made during the year in establishing and increasing smelting and refining capacities, of which the installation of electrolytic zinc and copper refineries at Trail and the beginning of construction of a nickel refinery at Port Colborne, Ont., are conspicuous examples. In addition, mention should be made of the production of metallic magnesium at Shawinigan Falls; of ferro-molybdenum at Orillia and Belleville; of metallic arsenic at Thorold; and of stellite, the cobalt

alloy for high speed tool metal, at Deloro; and of the increased capacity for the production of steel particularly the installation of electric furnaces.

"The mining output has been restricted and the efficiency of its operation considerably reduced by the withdrawal for war service of such a large proportion of the more highly experienced labour and engineering supervision. Higher costs have tended to offset the advantages to be derived from higher prices of output and in the case of gold mining have been a distinct burden."

"The mining and metallurgical industries include a great variety of products so that in dealing with the industry as a whole the total value presents the only means of comparison."

The total value¹ of the metal and mineral production in 1916 was \$177,201,534, compared with \$137,109,171 in 1915; \$128,863,075 in 1914, and \$145,634,812 in 1913, the latter being the highest production previously recorded. The increase in 1916 over 1915 was \$40,092,363, or 29·2 per cent, while compared with 1913 the increase was \$31,566,722, or 21·7 per cent.

The record of annual mineral production in Canada since 1886, shown in the following table, indicates the rapid growth which the mineral industry has made.

Annual Mineral Production in Canada since 1886.

Year.	Value of production.	Value per capita.	Year.	Value of production.	Value per capita.
886	12,518,894 14,013,113 16,763,353 18,976,616 16,623,415 20,035,082	\$ 2.23 2.267 2.96 3.50 3.50 3.92 3.39 4.04 3.98 4.05 4.38 5.49 7.32 9.27	1901 1902 1903 1904 1905 1906 1907 1908 1909 1910 1911 1912 1913 1914 1915 1916	63, 231, 836 61, 740, 513 60, 082, 771 69, 078, 999 79, 286, 697 86, 865, 202 85, 557, 101 91, 831, 441 106, 823, 623 103, 220, 994 135, 048, 296 145, 634, 812 128, 863, 075 137, 109, 171	\$12.16 11.36 10.83 10.27 11.49 12.81 13.75 13.16 13.70 14.93 14.93 14.42 18.27 18.77

The total value of the production in 1886 was \$10,221,255, or about \$2.23 per capita. In ten years the value had increased to \$22,474,256, or \$4.38 per capita, more than twice the total in 1886, and nearly twice the production per capita. The next ten years witnessed an increase to \$79,286,697 in 1906, or \$12.81 per capita, about $3\frac{1}{2}$ times the production in 1896. From 1906 to 1916 the total production has shown an increase of over 120 per cent.

In presenting a total valuation of the mineral production as is here given, it should be explained that the production of the metals, copper, gold, lead, nickel, and silver is given as far as possible on the basis of the quantities of metals recovered in smelters, and the total quantities in each case are valued at the average market price of the refined metal in a recognized market. There is thus included in some cases the values that have accrued in the smelting or refining of metals outside of Canada.

*Short tons throughout. (a) The metals, copper, lead, nickel, silver and zinc are for statistical and comparative purposes valued at the final average value of the refined metal. Pig-iron, zinc ore, and cobalt oxides are valued at the furnace or spot, and non-metallic products at the mine or point of shipment. (b) Copper concents of smelter products and estimated recoveries from ore servorted, at 17.275 cerus per pound, in 1915, and 27.202 cents per pound in 1916. (c) The total production of pig-iron in Canada in 1915 was 913.775 tons valued at \$16.750,898, of which 1,035,566 tons valued at \$8,688,325 should be credited to imported ores; in 1916 the total production was 1,169,277 tons valued at \$16,750,898, of which 1,035,566 tons valued at \$15,422,293 are credited to imported ores. (a) Refined ead and lead contained in base bullion exported at 5.000 cents per pound in 1915, and 8.513 cents in 1916, the average prices in Montreal. (c) Nickel contained in matte, as returned by the operators, was from 10 to 15 cents per pound for both years. (f) Silver recovered in bullion and recoverable from ores and smelter products which differ slightly from those of the Trade and Navigation reports. (m) Zinc production in 1916 is here given altogether in terms of metal, and in 1915 and subject on zinc for details.

The detailed comparative statement here presented shows the production of each important product during the past two years, the proportion which each contributes to the total production, and the increase or decrease as the case may be of the production in 1916 as compared with that of 1915.

The total value of the metallic production in 1916 was \$106,319,365, as against a value of \$75,814,841 in 1915, and \$59,386,619 in 1914, the increase in 1916 being 40 per cent over the previous year.

The total production of non-metallic products was valued at \$70,882,169, as against \$61,294,330 in 1915, and \$69,476,456 in 1914. While an increase of 15 per cent is thus shown over the production in 1915, the 1916 production was but little greater than that of 1914 and less than the production in 1912 and 1913.

The total annual production of metallic and non-metallic products since 1907 is shown in the following table:—

Annual Values of Metallic and Non-Metallic Production.

		Non-M		
Year.	Metallic.	Fuels and other Non- Metallics.	Structural or clay and stone quarry products.	Total.
1907	41,774,362 44,156,841 49,438,873 46,105,423 61,172,753 66,361,351	\$31,275,546 32,142,784 31,141,251 37,757,158 34,405,960 45,080,674 48,463,709 43,467,229 43,373,571 53,414,983	\$12,863,049 11,339,955 16,533,349 19,627,592 22,709,611 28,794,869 30,809,752 26,009,227 17,920,759 17,467,186	\$ (a) 86,865,202 (a) 85,557,101 91,831,441 106,823,623 103,220,994 135,048,296 145,634,812 128,863,075 137,109,171 177,201,534

⁽a) Total includes \$300,000 allowed for products not reported.

The production of pig-iron given in the general table includes only that proportion of the output of Canadian blast furnaces credited to Canadian ores. There is an important production of pig-iron from imported ores (shown in the footnotes to the general table and in the chapter on iron and steel) and the total value thereof in 1916 was exceeded only by the production of coal, gold, copper and nickel. There is also a large production of aluminium from imported ores for which no value is included, in the general table of production.

Metal prices again varied within wide limits. In 1915, the average price for most metals, with the notable exception of silver, was higher than the average for many years. The averages for 1916 were higher for all metals with the exception of antimony and spelter.

EXPORTS AND IMPORTS.

A very large portion of the mineral production of Canada is exported for consumption or refining outside of Canada. On the other hand considerable quantities of mine products, chiefly those which have been refined or subjected to partial treatment, or in the form of manufactured goods ready for consumption, are imported.

The total value of the exports of products of the mine, including direct mine products and manufactures thereof, in 1916 was \$171,178,583, compared with \$124,157,761 in 1915. This value includes for 1916 mine products to the value of \$80,755,461, and manufactures valued at \$90,423,122, as against mine products valued at \$57,951,340, and manufactures valued at \$66,206,421 in 1915.

Practically the whole of the Canadian production of copper, nickel, and silver is exported, also a very large proportion of the production of gold, asbestos, and mica. There are, as well, considerable exports of coal. These products alone contribute about 93 per cent of the value of the mine products exported. Manufactured products exported consist chiefly of iron and steel goods, agricultural implements, aluminium, calcium carbide, acetate of lime, fertilizers, and coke.

The United States is the chief destination of Canada's mine exports, about 77 per cent having been exported to that country during the fiscal year 1915-1916, and about 20 per cent to the United Kingdom.

The large increase in exports in 1916 has not been confined to any particular group, but has been participated in by almost every item in the table.

A great variety of mineral products, chiefly in the manufactured or semi-manufactured condition, are annually imported into Canada. These imports increased with great rapidity during the ten years preceding 1913. During the next two years, however, there was a falling off, but in 1916 the imports have again increased to a value almost equal to that of 1913. The total value of these imports during the calendar year 1916 was

\$256,144,573, as compared with imports valued at \$146,464,510 in 1915; \$181,675,667 in 1914; \$259,299,745 in 1913; and \$238,212,835 in 1912.

PRODUCTION BY PROVINCES.

A summary of the mineral production by provinces in 1915 and 1916 is shown in the accompanying tables, in the first of which the total production in the several provinces and the percentages of each, are given for the past three years. Ontario continues as the largest contributor to the total, having a production of \$80,461,323 or 45.4 per cent, as against \$61,071,287 or 44.5 per cent of the total in 1915. British Columbia was second, with a production of \$39,969,962 or 22.6 per cent, against \$28,689,425, or 20.9 per cent of the total in the previous year. Nova Scotia, third in importance, had a production of \$20,042,262, or 11.3 per cent of the total in 1916, as against \$18,088,342, or 13.2 per cent of the total in 1915. Quebec, in fourth place, had a production of \$14,406,598, or 8.6 per cent; Alberta occupied fifth place, with a production of \$13,297,543 or 7.5 per cent. The Yukon District, Manitoba, New Brunswick, and Saskatchewan, follow in the order named.

In making these comparisons it should be remembered that Nova Scotia is not credited with the large production of pig-iron and steel at Sydney and Sydney Mines, which is made almost entirely from imported iron ores and is not naturally credited as Canadian mine product. Similarly a large proportion of the pig-iron production in Ontario is excluded from the total value, because it is derived from imported ores. The Province of Quebec also, is not credited with the production of aluminium at Shawinigan Falls, which is made from imported bauxite.

MINE PRODUCTION.

For a number of years past this Division has endeavoured to obtain from every mine operator in Canada, an annual return with respect to labour employed, wages paid, tonnage and value of ores or minerals mined, treated and shipped, and in the case of metallic ores, the quantities of metals contained in the ores shipped or treated. In the case, however, of gold placer mining and the production of crude petroleum, it has not as yet been found feasible to obtain complete returns from the operators themselves, so that in these cases, while a record of production is available, there is no record of the labour employed, nor of the wages paid.

Statistics covering the past three years are shown in the accompanying tables. According to the records shown, the total value of the mineral production compiled on this basis was \$138,418,335 in 1916, as against \$115,158,848 in 1915, \$114,239,635 in 1914, \$126,444,201 in 1913, \$120,332,966 in 1912, \$91,876,084 in 1911, and \$92,501,244 in 1910. Excluding placer and hydraulic workings and petroleum wells, the total number of shipping mines, clay works, quarries, etc., in 1916 was 1,608, as against 1,618 in 1915, 1,661 in 1914, and 1,529 in 1913. The total number of men employed was 57,604, as against 56,876 in 1915, 66,855 in 1914, and 71,011 in 1913. The total wages paid were \$47,092,478 in 1916, as against \$37,720,762 in 1915, \$43,609,696 in 1914, and \$50,368,602 in 1913.

The total number of metalliferous mines shipping in 1916, exclusive of placer and hydraulic workings, was 260, as against 205 in 1915, 187 in 1914, and 183 in 1913; number of men employed in 1916, 14,598, as against 12,698 in 1915, 11,994 in 1914, and 12,437 in 1913; wages paid \$15,867,748 in 1916 as against \$11,805,919 in 1915, \$11,669,854 in 1914, and \$11,746,400 in 1913; tons of ore mined 7,450,654 in 1916, as against 6,138,150 in 1915; 4,997,406 in 1914, and 4,736,288 in 1913; tons of ore concentrates, or metal shipped from mines 4,684,041 in 1916, as against 4,259,734 in 1915, 3,115,855 in 1914, and 3,423,414 in 1913; total net value of shipments including placer gold \$67,536,166 in 1916, as against \$53,864,518 in 1915, \$44,763,179 in 1914, and \$47,170,740 in 1913.

In non-metalliferous mining, exclusive of stone quarries, clay works, etc., and not including petroleum wells, there were employed in 1916 an average of 30,541 men earning in wages \$24,987,562, as against 30,392 men earning in wages \$20,257,126 in 1915, 33,732 men, earning in wages \$22,058,526 in 1914, and 34,207 men employed and \$25,752,148 wages paid in 1913.

The manufacture of cement, clay products, and lime, and the quarrying of stone, etc., employed in 1916 an average of 12,465 men earning in wages \$6,237,168, as against an average of 13,786 men earning in wages \$5,657,717 in 1915, and 21,129 men earning in wages \$9,881,316 in 1914. These operations in 1913 engaged an average of 24,367 men earning \$12,870,054.

It should be noted that these records cover only active shipping mines and do not include the labour employed in prospecting or in developing new properties, nor is there included any record of the labour employed in the smelting and refining of ores, nor in blast furnace operations. The values of the ores given herewith are in general those furnished by the operators. In certain cases, however, where such values have not been furnished, estimates have been made.

The tables showing the quantities of metals contained in the ores shipped give the total quantities of metals contained without any deductions or allowances being made for smelter or treatment losses.

METALLIC ORES.

ALUMINIUM.

No commercial ores of aluminium have as yet been found in Canada. Aluminium is, however, made in extensive works at Shawinigan Falls, Quebec, from bauxite ores imported from France, the United States, and also formerly from Germany, by the Northern Aluminium Company. A wire mill for the manufacture of aluminium wire and cables is also operated by the same firm.

There being but one firm engaged in the manufacture of aluminium we are precluded from publishing statistics of production.

Imports of alumina, probably including bauxite, and exports of aluminium are, however, published in the reports of the Department of Customs.

During the twelve months ending December 31, 1916, the imports of alumina were 53,819,000 pounds, or 26,910 tons valued at \$1,114,061, as against 35,016,200 pounds or 17,508 tons valued at \$892,634 in 1915.

The imports of aluminium in ingots, bars, tubes, etc., were in 1916, 1,355,503 pounds or 678 tons, valued at \$526,646; besides manufactures of aluminium valued at \$144,452, compared with 2,667,355 pounds, or 1,334 tons of aluminium in ingots, bars, tubes, etc., valued at \$633,502, and manufactures of aluminium valued at \$88,733, in 1915.

The exports of aluminium in ingots, bars, tubes, etc., in 1916, amounted to 18,425,300 pounds, or 9,213 tons, valued at \$5,201,066, together with manufactures of aluminium valued at \$26,780, as against 18,680,800 pounds, or 9,340 tons, valued at \$3,333,726, and manufactures valued at \$620,562, in 1915.

(a) Not given separately, previous to 1914.

Prices.—The price quotations on aluminium in New York remained steady around 60 cents for the greater part of the year.

The variety of uses of aluminium created by the exigencies of the war were the cause of the demand greatly exceeding the supply. There was a continued large demand for aluminium for the manufacture of "Ammonal," an explosive which is a mixture of nitrate of ammonia and powdered aluminium, also for the frame work of airships, aeroplanes, certain parts of machine guns, rifle bullet points, etc.

¹ As quoted by the Engineering and Mining Journal, Jan. 6th, 1917.

ANTIMONY.

Shipments of both antimony ore and concentrates, and of refined antimony were made from Canadian properties during 1915 and 1916, this being the first recorded production of antimony since 1910. Refined antimony was produced at the smelter of the Consolidated Mining and Smelting Company at Trail, B.C., recovered from the residues of the lead refinery; and at the works, at Lake George, New Brunswick, of the New Brunswick Metals, Limited, the latter property having been formerly operated by the Canadian Antimony Company.

The production of refined antimony was reported as 107,185 pounds valued at \$41,823, as against 59,440 pounds valued at \$11,888 in 1915.

The shipments of antimony ore and concentrates were reported as 885 tons, containing approximately 750,400 pounds of antimony, and valued at \$94,537, as against 1,341 tons, containing approximately 1,050,196 pounds of antimony and valued at \$81,283 in 1915.

This production was derived principally from the mines of West Gore, Hants Co., Nova Scotia, and the property of the New Brunswick Metals, Ltd., at Lake George, New Brunswick. There were also shipments from the Alps-Alturas property, near Sandon, B.C., and from the Wheaton district, Yukon Territory.

Prices.—The price of antimony, ordinary grades, in New York, ranged between a maximum of 46 cents in March, and a minimum of 9 cents in August, after which precipitate decline the prices gradually increased to about 15 cents in December.

The decline in prices was due to the new production especially in China which is the principal source of the world's supply of antimony.

Antimony is reported¹ smelted in the United States by the following firms:—

Magnolia Metal Co., 115 Bank St., New York City. Smelter at Matawan, N.J.

The Pennsylvania Smelting Co., Pittsburgh, Pa.

Great Western Smelting and Refining Co., Chicago, Ill.

Western Metals Co., 625 Security Building, Los Angeles, California. Chapman Smelting Co., 409 Battery St., San Francisco, California. International Smelting Co., Wm. Wraith, Mgr., Salt Lake City, Utah.

Antimony Smelting and Refining Co., Central Building, Seattle, Wash.

Besides these the American Star Antimony Co., is extracting antimony electrically at Gilham, Ark.; the Hoyt Metal Co., St. Louis, Mo., smelts more or less antimony ores in conjunction with lead ores to make antimony lead; and the John Finn Metal Works, San Francisco, Cal., has also treated some antimony ores.

¹ The Mining Congress Journal.

COBALT.

The silver-cobalt-nickel arsenides of Coleman and adjacent townships, more familiarly known as the Cobalt district, in the Province of Ontario, are now the principal sources of the world's supply of cobalt.

The recovery of this metal in Canada has been in the form of cobaltoxide and mixed oxides of cobalt and nickel, produced by the smelters treating the above ores, together with cobalt residues produced at the high grade mill of the Nipissing Mining Company. Formerly these residues have been chiefly exported, but they are now being shipped mainly to Canadian smelters.

In addition to the oxide of cobalt, there is now being recovered metallic cobalt, cobalt sulphate, cobalt carbonate, cobalt hydroxide, unseparated oxides, and stellite (the cobalt alloy used for high speed tool metal).

The total production of cobalt contained in smelter products recovered and in cobalt residues exported during 1916, amounted to 840,536 pounds which if valued at \$1.10 per pound, would be worth \$924,590, as against 504,212 pounds valued at \$536,268, in 1915.

This production included in 1916, 215,215 pounds of metallic cobalt, valued by the producers at \$200,888; 670,760 pounds of cobalt oxide, valued at \$542,341; together with smaller quantities of cobalt sulphate, cobalt carbonate, cobalt hydroxide, unseparable oxides, stellite, and cobalt residues.

The 1915 production included 211,610 pounds of metallic cobalt, valued at \$197,994, and 423,717 pounds of cobalt oxide, valued at \$338,273 (including a small production of cobalt sulphate).

The total cobalt ores and residues treated in 1916 amounted to 8,127 tons with a cobalt content of 1,254,953 pounds.

Some of the cobalt residues from the Nipissing mill were shipped to smelter works in Great Britain.

No record is available as to the recovery of cobalt from silver ores exported but it is stated that cobalt speiss has been accumulated at United States smelters treating these ores.¹

¹ Mineral Resources of the United States 1913, p. 340.

Prior to the war the principal demand for cobalt was for colouring in the ceramic industry.

A small demand for cobalt metal now exists for use in making high speed tools, such as "stellite," an alloy of cobalt, chrome, and tungsten, or molybdenum.

A small amount is used for plating and for making salts, such as cobalt sulphate and cobalt carbonate, and also for making cobalt hydroxide.

The market for cobalt was very poor in 1915, but improved somewhat in 1916. The price of cobalt as quoted in New York in 1916, ranged from \$1.25 to \$1.50 per pound.

The results of researches on cobalt and cobalt alloys, undertaken for the Mines Branch, by Dr. H. T. Kalmus, at Queens' University, have been published in five parts.1

Under the provision of the "Metal Refining Bounty Act," passed by the Ontario Legislature in 1907, bounties amounting to \$26,744.75 were paid to refineries on cobalt oxide, and \$10,280.28 on nickel oxide in 1914, while in 1915, \$19,029.22 was paid on cobalt metal and cobalt oxide, and \$6,521.69 on nickel metal and nickel oxide.

The bounty is at the rate of six cents per pound on the metallic contents of the oxides. The "Act", which expires in April 1917, was quoted in the Annual Report on Mineral Production of Canada during the Calendar Year 1914, and previous reports of this Division.

COPPER.

The total production of copper in 1916, estimated on the basis of smelter recovery from ores treated, was 117,150,028 pounds, which at the average price of copper for the year in New York, 27·202 cents per pound, would be worth \$31,867,150, as against 100,785,150 pounds, valued at \$17,410,635 in 1915; that is an increase of 16·2 per cent in quantity and 83·0 per cent in value; and if compared with the 1914 production, the increase amounts to 50·4 per cent in quantity, and 209·3 per cent in value.

During 1912, 1913, and 1914, there had been a gradual falling off in quantity, and owing to the decrease in the price of the metal, a still greater falling off in value, but due to the great demand for copper for munitions, the production in 1915 and 1916 exceeded, both in quantity and value, that of any preceding year.

Statistics showing the annual copper production in Canada since 1886 are given in the following table, which shows the yearly increase or decrease as the case may be and also the yearly price per pound in New York:—

Annual Production of Copper.

^{*}The decrease is not as large as the figures would indicate because of the calculation of part of the 1909 production on a different basis from previous years.

The production of copper in Canada in 1916 included 32,611 pounds recovered in copper sulphate; 43,615,868 pounds contained in blister copper

exported for refining; 49,115,124 pounds contained in matte, chiefly nickel-copper matte, exported for refining (including small amount of copper refined at Trail); and 24,386,425 pounds in ore, after allowing for smelter losses, exported for smelting and refining.

The total production in 1915 included 44,597 pounds recovered in copper sulphate; 42,050,347 pounds contained in blister copper exported for refining; 44,185,455 pounds contained in matte, chiefly nickel-copper matte, exported for refining, and 14,504,751 pounds in ore, after allowing for smelter losses, exported for smelting and refining.

The Province of British Columbia in 1916 contributed $54 \cdot 3$ per cent of the total, as against $56 \cdot 2$ per cent in 1915; Ontario contributed $38 \cdot 4$ per cent, as against $39 \cdot 0$ per cent in 1915; Quebec contributed $4 \cdot 9$ per cent, as against $4 \cdot 1$ per cent in 1915; and the Yukon Territory contributed $2 \cdot 4$ per cent, as against $0 \cdot 5$ per cent in 1915.

Production of Copper by Provinces, 1914, 1915, and 1916.

Prices.—The price of copper in New York, which was quoted at $22\frac{1}{2}$ cents at the beginning of 1916, rose quite steadily to a maximum of about 34 cents in the early part of May. Then the price gradually receded to $22\frac{3}{4}$ cents late in July, to again increase, reaching a maximum of 35 cents in November. The price started to drop again, closing the year with $28\frac{3}{4}$ cents. The Engineering and Mining Journal attributes the high prices in May and November to the large orders from the Allied Governments, and the decrease at the end of the year to the German peace proposal.

Exports and Imports.—With the exception of a small output of copper sulphate at Trail, B.C., the copper production of Canada is exported for refining. The exports of copper in ore, matte, regulus, etc., during the calendar year 1916 were 124,942,400 pounds valued at \$20,776,536, of which 89.4 per cent, in quantity, and 95.3 per cent in value were exported to the United States, and 10.6 per cent in quantity, and 4.7 per cent in value to Great Britain.

In 1915, $81 \cdot 2$ per cent in quantity, and $86 \cdot 7$ per cent in value were exported to the United States, and $18 \cdot 8$ per cent in quantity, and $13 \cdot 3$ per cent in value to Great Britain.

The exports of copper, black or coarse, and in pigs, etc., were to the United States, with the exception of a very small quantity to Newfoundland, and amounted to 2,430,400 pounds valued at \$581,268. The exports of "old and scrap" copper amounted to 5,846,600 pounds valued at \$1,284,895, most of which went to the United States.

The total exports of copper in 1916, were 133,219,400 pounds valued at \$22,642,699, an increase of 23 per cent in quantity and 73 per cent in value over the exports of 1915.

*Includes "Old and Scrap."

The total recorded imports of copper during the calendar year 1916 were valued at \$7,566,080, and included: crude and manufactured copper, 25,594,029 pounds valued at \$7,133,117; copper sulphate, 1,803,655 pounds valued at \$198,542; and the manufactures of copper valued at \$234,421. In 1915, the total imports were valued at \$3,957,770, and included: crude and manufactured copper 20,245,407 pounds, valued at \$3,593,818; copper sulphate, 1,854,850 pounds valued at \$99,282; and the manufactures of copper valued at \$264,670.

Unfortunately the above record does not represent the total copper imports during 1916 because of the fact that large quantities of copper, imported for the use of the Imperial Government, have been, for Customs Records' purposes, entered with many other products under one item.

According to United States trade records the exports from the United States to Canada of copper in pigs, ingots, bars, rods, wire, plates, etc., amounted during the calendar year 1916 to 45,947,740 pounds valued at \$12,553,494, as against 24,128,098 pounds valued at \$4,638,191 in 1915, and 24,221,498 pounds valued at \$3,731,774 in 1914. The copper contents of brass or other alloys are not included. It will be noted that these figures are considerably higher than the Canadian record for both 1916 and 1915.

The following tables of imports show that the imports in 1916, were nearly double those of 1915, and exceeded those of 1913, the highest on record

Imports of Copper, 1915 and 1916.

There are also imports of copper in the form of brass. The recorded imports of brass in 1916 included 2,974,676 pounds of metal in crude and manufactured form (see chapter on Zinc), valued at \$923,523, and containing possibly 2,082,273 pounds of copper; and also manufactures of brass, quantity not recorded, valued at \$3,752,851; while in 1915 the imports of brass included 3,810,946 pounds of metal in crude and manufactured form, valued at \$714,410, and containing probably 2,667,663 pounds of copper; and also manufactures of brass, quantity not recorded, valued at \$2,463,532.

Consumption.—In view of the large import of manufactured copper and brass for which no quantity is recorded, it is difficult to estimate closely the consumption of copper. The imports in 1916 amounted to at least 51,000,000 pounds on the basis of the United States record, and allowing 5,000,000 pounds for metal contained in other manufactures of copper and brass. Domestic production was practically all exported together with 6,000,000 pounds of copper "old and scrap," which, if deducted from the imports, gives an estimated consumption of 45,000,000 pounds, or 22.500 tons.

Quebec.

The mines in the Eastern Townships continued very active throughout the year, and the completion of the new concentrator at the Eustis mine in the mid-summer contributed to the increased production which amounted to 5,703,347 pounds, valued at \$1,551,424, representing the estimated recovery from 130,492 tons of ore and concentrates with a metal content of 8,215,085 pounds of copper.

Ontario.

The copper production from Ontario comes mainly from the nickel-copper ores of Sudbury district.

The chief companies are:-

The Canadian Copper Co., Ltd., shipping from the Creighton and adjoining properties.

The Mond Nickel Co., Ltd., operating at Coniston.

The Alexo Mining Co., operating near Porquis Junction, and shipping to the Coniston smelter.

The British American Nickel Corporation, which carried on active development and construction work but did not ship during 1916.

A few small shipments were also made from the following:—

The Bruce Mine, near Bruce Mines, Algoma.

The Cheney Mine, near Thessalon, Algoma.

The property of the Sable River Copper Co., now known as the Kenyon Copper Mines, Ltd., near Massey, Sudbury.

The Tip-Top Mine, near Port Arthur, in the Thunder Bay district. The Hewitson, operated by the Mine Centre Copper Co., and now known as the Port Arthur Copper Co., Ltd., near Shoal lake, Rainy River district.

The copper production from Ontario in 1916 amounted to 44,997,035 pounds valued at \$12,240,094, equivalent to 38.4 per cent of the production for Canada. Details of the production of copper from the nickel-copper ores are given in the article on "Nickel."

The production of copper from the copper mines and Cobalt district amounts to less than one per cent of the total.

The Ontario Government offers a bounty on copper over 95 per cent pure metal, and on copper-sulphate produced from ore mined and refined in the Province. The text of the Act was quoted in the Annual Report on Mineral Production of Canada, 1914, p. 60.

British Columbia.

The total quantity of copper contained in matte, blister, and coppersulphate produced in British Columbia in 1916, and including an estimate of smelter recovery for copper ores exported, was 63,642,550 pounds, after deducting the amount of copper produced from foreign ores.

The following table shows that the production in 1916 exceeded that of 1915 by over seven millions of pounds, an increase of 10.9 per cent. It was nearly double in quantity and over thrice in value that of 1908, when this department first collected returns of smelter production.

British Columbia: Production of Copper.

Since 1909 the method of compilation of statistics of copper production by the Provincial Bureau of Mines of British Columbia, which is based upon ore shipments from mines, provides for a deduction of five pounds of copper per ton of ore shipped on account of smelter losses, a method which gives a result closely approximating that obtained by this Branch. Previous to 1909 no allowance for smelter losses was made.

[†] As published by British Columbia Bureau of Mines.

Copper mining is now by far the most important form of mining in the Province and in 1916 it formed about 57 per cent of the total value of the metalliferous mines.

In the Boundary the production was mainly from the mines of two of the large smelting companies: The Granby Consolidated Mining, Smelting & Power Co., Ltd., and the British Columbia Copper Co., Ltd.

These two companies operate their own smelters and convert their matte to blister copper. The low grade ores of this district are self-fluxing and very uniform in character, averaging a little over one per cent in copper, and from \$1 to \$2 in gold and silver.

The British Columbia Copper Company have been steadily developing their properties at Princess camp in the Similkameen, employing a large number of men. Some properties were producing during 1916 and we may look forward to the eventual establishment in that part of the country of another important copper producing centre.

Much development and some shipments are reported from the Ashcroft and Nicola divisions.

In the interior the main shippers were, at Rossland, the Centre Star and Le Roi groups, owned by the Consolidated Mining and Smelting Co., and the Le Roi II (Josie) mine. Besides these, shipments were made from the Nelson district by the Queen Victoria mine and a few other operators.

In the Kamloops division the Iron Mask mine is the only important shipper.

Much development work was done in the neighbourhood of New Hazelton in the Omineca mining division, and the Rocher Déboulé mine, after a couple of years of extensive development, has become an important producer.

There was noted in 1915 a large increase in the production of the Coast district which more than offset the falling off in the Boundary district. The increase was still more remarkable in 1916, and was due mostly to the Hidden Creek mines on Observatory inlet, the Britannia mines on Howe sound, and the Marble Bay mines on Texada island.

Yukon.

The production from the Yukon Territory has been from the Whitehorse district. The mines in this district had been more or less idle for the past few years, but the high price of copper during 1916 was the cause of much activity. The production amounted to 2,807,096 pounds, valued at \$763,586, as against 533,216 pounds, valued at \$92,113 in 1915.

The principal shippers by order of importance were: The Pueblo, operated by the Yukon Mining Co., the War Eagle, Grafter, Copper King, and Anaconda.

GOLD.

The production of gold in Canada in 1916 amounted to 930,492 fine ounces, valued at \$19,234,976, and was made up as follows: (a) gold derived from alluvial workings, \$4,964,831 or $25 \cdot 8$ per cent of the total; (b) gold obtained from the crushing of free milling quartz ores, i.e., stamp mill bullion, \$10,480,661 or $54 \cdot 5$ per cent of the total; and (c) gold obtained from ores and concentrates sent to the copper and lead smelters, \$3,789,484 or $19 \cdot 7$ per cent of the total production.

The production during 1915 was 918,056 fine ounces, valued at \$18,977,901, and included: (a) gold derived from alluvial workings, \$5,524,476 or 29 per cent of the total; (b) gold obtained from the crushing of free milling quartz ores, i.e., stamp mill bullion, \$8,909,170 or 47 per cent; and (c) gold obtained from ores and concentrates sent to the copper and lead smelters, \$4,544,245 or 24 per cent of the total production.

†Calculated from the value: one dollar = 0.048375 oz.

Gold was first discovered in various provinces about 1858, and the production gradually increased to over four million dollars in 1863, but fell again to \$907,601 in 1892. The discovery of gold in the Yukon and other discoveries in 1896 gave the mining industry a new impetus, resulting in a rapid increase in the gold production, which, in 1900, reached the high mark of nearly twenty-eight million dollars. From this maximum it decreased again to a little over eight million dollars in 1907. With the discovery and development of the Porcupine mines in Ontario, gold production has rapidly increased again.

The Dominion Assay Office in Vancouver, operated in connexion with this Department, receives, assays, and purchases crude bullion, amalgam, nuggets, and dust, the resultant bullion being resold. The total quantity of bullion thus received during the twelve months ending December 31, 1916, was $180,292 \cdot 83$ ounces, which, after melting was reduced to $175,393 \cdot 10$ ounces and valued at \$2,828,239.65, after deducting office charges. The loss by melting was $2 \cdot 718$ per cent. The receipts were mostly from British Columbia and the Yukon, with also a few small deposits from Alaska and Alberta.

Receipts at Dominion Assay Office, Vancouver.

Year.	Weight before melting.	Weight after melting.	Net value.	Year.	Weight before melting.	Weight after melting.	Net value.
1908(a)	48,478·58 46,064·31 39,784·70	47,576·27 45,228·92 39,069·31	746,101.92 647.416.38	1914 1915 1916	166,148.83 183,924.49 180,292.83	163,523.61 179,751.68 175,393.10	2,029,251.31 2,736,302.31

⁽a) For 9 months only. (b) The removal of the assay charge in January 1913, accounts for the large increase.

Refined Metal.—There are two refineries producing fine gold in Canada; the Royal Mint at Ottawa, which receives shipments of gold from various provinces in the Dominion; and that of the Consolidated Mining and Smelting Co. of Canada, Ltd., at Trail, B.C., where gold is mainly recovered from the high grade silver-lead ores and the "dry" ores shipped to the smelter.

The production of gold by provinces is given in the following table in which it will be seen that Ontario, since the discovery of the Porcupine camp, has gradually increased its production, and to such an extent that in 1916 it produced 52.9 per cent of the total, as against 44.3 per cent in 1915, and 14.1 per cent in 1912, when Porcupine came into prominence.

Production of Gold by Provinces, 1914, 1915, and 1916.

[‡]The exact value of fine gold is \frac{8300}{327} dollars per ounce equivalent to \$20.671834. (United States Standard.) In most cases, statistics of gold production are stated as crude bullion with value thereof. The fine ounces given in the tables in this report are calculated from the values by multiplying these by $\frac{387}{8000}$ or 0.048375.

Exports and Imports.—The exports of gold in dust, nuggets, etc., during 1916 were valued at \$18,382,903 as against \$16,528,143 in 1915.

The imports during 1916 were: gold bullion, valued at \$18,648,770; gold coins, \$17,828,695; and manufactures of gold and silver, valued at \$492,361; while in 1915 the imports were: gold bullion, valued at \$1,028,405 gold coins, \$19,910,229; and manufactures of gold and silver valued at \$464,294.

Nova Scotia.

The gold production of this Province, which is derived almost entirely from quartz ores, is reported by the Provincial Department of Mines in 1916 as 4,562 fine ounces, valued at \$94,305, as compared with 6,636 fine ounces valued at \$137,180, in 1915, a decrease of 31 per cent. In 1915 there had been an increase of 128 per cent over the production of 1914.

The production of Nova Scotia which was 6,863 fine ounces in 1862, reached a maximum of 30,348 fine ounces in 1902; then decreased gradually, reaching in 1913 a minimum of 2,174 fine ounces. It is interesting to note that the production in 1915 is nearly identical to that of 1862, the first year returns were reported by the Provincial Mines Department.

Quebec.

The gold production in Quebec during 1916 was 1,034 fine ounces, valued at \$21,375, as against 1,099 fine ounces, valued at \$22,720, in 1915.

This production is derived from the pyritic mines of the Eastern Townships, which are worked chiefly for the sulphur and copper contents of the ore. No alluvial production has been reported for a number of years.

Ontario.

The gold production in Ontario, which in 1913 had exceeded the total of all the other years since 1886, more than doubled that figure in 1916, amounting to 492,481 fine ounces, valued at \$10,180,485, as against 406,577 fine ounces, valued at \$8,404,693 in 1915, an increase of 21·1 per cent.

†Calculated from the value; one dollar = 0.048375 ounce.

The Porcupine district has since its development in 1912 been the main producer. Other producing districts were: Kirkland Lake and Munro township, in Timiskaming district; and Long Lake, near Naughton, Sudbury district.

Other districts besides Timiskaming and Sudbury, though not as yet arrived at the producing stage, have shown much activity during 1915 and 1916, and may soon become important centres.

The principal of these districts is the Kowkash district, Thunder Bay, which is reported on by Mr. P. E. Hopkins of the Ontario Bureau of Mines.¹

Other gold discoveries were subsequently made in the surrounding district, the most important being at Tashota, 22 miles west of Kowkash, where gold and tellurides were discovered.

In the Kenora district much interest has been caused by the report of rich gold findings on the Rognon property, near Wabigoon lake.

In the Boston Creek district, Timiskaming, the promising development work on several properties attracted many prospectors to the area and resulted in new discoveries in this district. The Provincial Bureau of Mines had a report made on this district, and published in 1916.²

Much prospecting and development have been done in the adjoining district of Goodfish lake.

The most spectacular find probably ever made was that of August, 1915, in Munro township, Timiskaming, on the Dobie-Leyson property, now called the Croesus mine. Specimens from this property have been reported to run from 2,000 to 3,000 ounces in gold.

Since 1914, Ontario has become by far the largest producer of gold in Canada, and this remarkable increase was brought about by the successful development of the Porcupine district and by the extension of milling facilities in that camp.

¹ Bulletin No. 27 of the Ontario Bureau of Mines, on Kowkash gold area.
² Bulletin No. 29 of the Ontario Bureau of Mines, on Boston Creek and Goodfish Lake gold areas.

The principal producers in Ontario during 1916 were:-

Operator,	Mine.	District.
Canadian Exploration Co. Dome Mines Co., Ltd. Dome Lake Mines, Ltd. Consol. Gold Mines, Ltd. McIntyre Porcupine Mines, Ltd. Mines Leasing and Developing Co. Porcupine Crown Mines, Ltd. "Vipond Mines Co., Ltd. Wm. C. Offer et al. Schumacher Gold Mines, Ltd. Tough Oakes Gold Mines, Ltd. Croesus Gold Mines, Ltd.	Dome	Timiskaming:— Porcupine. """ """ """ """ """ """ """ """ """

The following notes are taken from the respective companies' reports:—

The Dome Mines Co., Ltd.

"Record of Production for twelve months ending March 31, 1917:—

Tons of ore milled	\$5.083
Bullion recovered by amalgamation	\$1,337,911
Per cent of value recovered by amalgamation.	35.672
Total value recovered. " cyanidation	\$2,171,785
Per cent of value recovered	

The completion of the plant extension has resulted in a modern installation with a milling capacity of 45,000 tons and a mining capacity of more than double that amount.

The conditions under which we are operating have been very bad, and gradually get worse month by month. During our fiscal year, 1915-1916, the cost of producing an ounce of fine gold was \$10.30. During our fiscal year, 1916-1917, the cost was \$11.82; during the last five months of the above year the cost had risen to \$12.64; during the months of March and April the cost had risen to \$14.18.

The Dome is a long-lived mine with liberal ore bodies, which will be profitably mined for many years to come, and the labor shortage will eventually rectify itself.

Needless to add that the Dome Mine is essentially a low grade proposition.

1916	601,854	5,073,401.05	3,126,000

The dilution of ore with waste has the effect of lowering the value per ton of the mixture, although it increases the number of tons. Our experience, after five years of operations, has been that there is a dilution of approximately 10 per cent, and hence the present estimate of 3,938,540 tons at \$8.68 per ton will, when milled, probably yield approximately 4,300,000 tons, averaging about \$7.75 per ton.

During the year additions to the mill were completed and the tonnage treated per four weeks gradually increased from 43,000 tons to 50,000 tons.

McIntyre Porcupine Mines.

Year ending June 30, 1917, (15 months):—

Tons of ore milled	179,021
Average value	
Extraction per ton	\$9.36
Tailing loss per ton	0.46
Gross value	,757,530,14
Bullion produced and by-products obtained\$1	676,982,39
Total loss in tails	\$80,547,75
Per cent of extraction	95.4
Cost per ton of ore milled	\$4.78
Profit	\$4.58
Profit Per cent of possible running time	90.27

Operating results have been highly satisfactory, considering the handicaps under which, owing to its standard of value, the mining of gold is carried on while all other metals, due to conditions incidental to the great war, have materially advanced in value. Mine and milling costs have been low, notwithstanding the exceedingly high cost of supplies and labour and the natural disadvantages attendant upon gold mining under present conditions. The costs shown in the accompanying report include the total costs of operations, none of our development work being capitalized or deferred to future operations.

During the period 179,021 tons of the Company's ore were treated, yielding \$1,676,982.39. In addition 16,286 tons were treated for subsidiary Companies, which yielded \$187,931.89, or a total of 195,307 tons and \$1,864,914.28 in bullion. Average value of all ore treated was \$10.00 with a recovery of \$9.55 per ton.

Previous to January 1st., 1917, production for McIntyre-Lyupiter and McIntyre-Extension Mines are treated separately and since that date when amalgamation was effected their production is included in McIntyre-Porcupine figures.

While the amount of development work performed has not been up to our expectations, the results obtained are very satisfactory. After mining and treating ore of a value of \$1,954,793.28, the ore reserves have been increased over 100%.

Porcupine Crown Mines, Limited.

Year ending December 31, 1916:—

Tons of ore milled	Total. 51,273 \$11.78
" extraction Cost per ton of ore milled.	\$5.47
Gross value of production. Mint charges. Mine operation expense	\$574,604.98 \$2,952.48 \$280,569.60
mine operation expense: " net profit. Dividend paid in 1916.	\$291,082.90 \$240,000.00

The war tax amounts to about $3\frac{3}{4}\%$ on the running profits, and totalled in 1916, \$11,169.49, and will amount to \$9,627.58 in 1917. The ore reserves are estimated at 97,000 tons of a value of \$1,050,000, as against 150,000 tons last year of a value of \$1,250,000, but with an increased net profit of over \$100,000.

Schumacher Gold Mines, Limited.

Year ending March 31, 1917, (nine months only):-

Tons of ore milled	35,271
Average value per ton	\$5.243
Total value sent to mill	\$184,919.82
Values recovered	\$169,186.78
Average tons per day	128 - 25
	147.73
Per cent of time run	87 · 1

The total ore reserves amount to 99,425 tons with an estimated value of \$674,240. The new mill addition contracted for will increase our output to 180 tons a day and this added capacity should be available by July or August, 1917. If conditions warrant, the mill equipment by the end of the year can be so augmented as to provide a daily output of 300 tons.

Manitoba.

There was no production in Manitoba during 1916, but development work was carried on extensively in the Big Rice Lake district, east of Lake Winnipeg, and in the Pas district, Northern Manitoba.

About 85 miles northeast of Pas is Herb or Wekusko lake, where several companies are operating, the principal one, which made its first shipment early in 1917, being the Northern Manitoba Mining and Development Company.

A few miles southwest from Herb lake is Flin Flon lake, where much development has been carried on by the Great Sulphides Gold Mines, Ltd.; and Schist lake, near which operations are being carried on by the Mandy Mining Co., Ltd., a subsidiary company of the Tonopah Mining Company, and which has the distinction of being the first to ship from this new district early in 1917.

Mr. E. L. Bruce, of the Geological Survey, has been conducting an exploration of the Pas district for the past two years and reported last year as follows:—

Gold-bearing quartz veins have now been discovered in so many parts of the belt of basic rocks extending from Amisk lake (in Saskatchewan) to Wekusko lake (in Manitoba), that there seem to be good possibilities of finding gold in paying quantities. Careful examination requires time and work. This is especially true in a eastern part where the thick deposits of Lake Agassiz clays mantle the rock surfaces. All parts of the ar, thare easily accessible by canoe travel, but thorough prospecting will demand examination of the country in a lift from the main routes, and attention concentrated on a few promising claims rather than dissipated over a large number.

A report on Rice Lake, Pas, and Star Lake districts, prepared by Dr. R. C. Wallace and Mr. J. S. Delury, acting for the Manitoba Public Utilities Commission, Winnipeg, was published early in 1917.

Saskatchewan.

In the autumn of 1913 considerable interest was created in the reported gold discoveries at Beaver lake (Amisk lake). A number of prospectors went in with the opening of navigation. A good deal of prospecting was done during 1914, and some further work in 1915, but as yet no production has been reported. Amisk lake is at the western end of the area being examined by Mr. Bruce and referred to under "Manitoba."

Alberta.

In past years there has been a small production of gold from the gravels of the Saskatchewan river. A recovery was reported for 1916 amounting to 82 ounces, valued at \$1,695, as against 195 ounces, valued at \$4,026, in 1915.

The operations are carried on by individuals, and the returns are necessarily incomplete.

‡Calculated from the value: one dollar = 0.048375 oz.

British Columbia.

The gold production of British Columbia in 1916 amounted to 219,633 fine ounces, valued at \$4,540,216, and comprising: (a) placer gold \$580,500 or 12.8 per cent of the total; (b) bullion from milling ores \$290,088 or 6,14 per cent of the total; and (c) smelter recoveries \$3,669,628 or 80.8 for cent.

In 1915 the production was 273,376 fine ounces, valued at \$5,651,184 and comprising: (a) placer gold \$770,000, or $13 \cdot 6$ per cent of the total; (b) bullion from milling ores \$405,334, or $7 \cdot 2$ per cent of the total; and (c) smelter recoveries \$4,475,850, or $79 \cdot 3$ per cent.

The total production in 1916 showed a decrease of nearly 20 per cent, and is accounted for by the following reasons: the shortage of water, the scarcity of men, and the very high cost of supplies. Under normal conditions these detrimental causes will be obviated and a much larger production will result therefrom.

†Calculated from the value: one dollar = 0.048375 oz.

The statistics of lode gold represented, as closely as can be ascertained, the actual gold recovery based on smelter recoveries and bullion shipments.

The record of production of placer gold is given as ascertained by the Provincial Mineralogist, who, in his Annual Report states that:—

Great difficulty is found in obtaining reliable figures, since the work is, in many cases, carried out by individuals or unorganized groups of men who keep no books, frequently paying wages, or for supplies, in gold-dust, which, being readily transported, is scattered, and the tax imposed thereon by law is thus evaded.

The production of gold from lode mining as reported by the Provincial Bureau of Mines being based upon metal contents of ore shipments is naturally somewhat higher than the record of smelter recoveries.

Yukon.

The gold production of the Yukon in 1916 amounted to 212,700 ounces valued at \$4,396,900, and includes 690 ounces valued at \$14,264, derived from lode mining. It showed a decrease of nearly 8 per cent on the production for 1915.

The placer production of the Yukon in 1916 is estimated at 212,010 fine ounces of gold, valued at \$4,382,636, and 47,703 fine ounces of silver, valued at \$31,322, making a total valuation of \$4,413,958.

The placer production of the Yukon in 1915 was estimated at 229,803 fine ounces of gold, valued at \$4,750,450, and 51,706 fine ounces of silver, valued at \$25,689, making the total valuation of the Yukon placer output \$4,776,139.

‡Calculated from the value: one dollar = 0.048375 oz. *Including a small production from lode mines.

The statistics of production of gold in the Yukon district during the years between 1898 and 1906, as given in the table showing the annual production, are based primarily on the receipts of gold at the United States mints and receiving offices credited to the Canadian Yukon. Although a royalty was exacted on the gold output, it seems certain that considerable amounts of gold were produced which escaped royalty payment especially during the years of high production.

Since 1906 the statistics of gold production of the Yukon have been based on the royalty of $2\frac{1}{2}$ per cent which is collected by the Interior Department. For the purpose of collecting the royalty, a fixed value of \$15 per ounce is placed on the crude gold. The actual value of the deposits for a number of years, has been about \$16.50 per ounce. At the Dominion Government Assay Office at Vancouver, B.C., there were deposited during the twelve months ending December 31, 1916, 95,005 \cdot 82 ounces from the Yukon, valued, after all the charges had been deducted, at \$1,525,723.55, showing an average of \$16.06 per ounce, as against 87,040 \cdot 87 ounces, valued at \$1,418,496.63, or an average of \$16.28 per ounce in 1915.

Receipts from the Yukon, at the Dominion Government Assay Office, Vancouver, B.C.

Year.	Weight before melting.	Net value.	Average value.	Year.	Weight before melting.	Net value.	Average value.
1908 (a)	Ounces. 60,132·00 5,003·12 3,594·87 2,073·61 2,211·88	\$1,000,296 83,871 62,094 34,994 36,481	\$16.63 16.75 17.27 16.88 16.41	1913 (b) 1914 1915 1916	Ounces. 15,235·29 56,564·83 87,040·87 95,005·82	\$ 247,189 915,914 1,418,497 1,525,724	\$16.22 16.21 16.28 16.06

(a) For nine months only.(b) The removal in 1913 of the assay charge accounts for the great increase.

The production of crude placer gold in the Yukon during the past six years, as ascertained by the Interior Department, and upon which a royalty of $2\frac{1}{2}$ per cent has been collected, is shown in the accompanying table:-

Production of Crude Gold in the Yukon District.

(Gross weight of dust, nuggets, and bullion, in ounces.)

Since 1898 a royalty to the extent of \$4,476,209.67 has been collected on the gold production of this district. The yearly amounts collected, as well as the annual production of gold as ascertained by the Interior Department, are shown in the accompanying table. The difference between these figures and those shown in the table of annual production of the district which are based on mint receipts of Yukon gold, has already been mentioned, and is probably due to three factors: (1) the fixing of the value of the gold for royalty purposes at \$15 per ounce, a figure probably slightly below the actual value of the gold, (2) the probability that in the earlier years of royalty collection, considerable quantities of gold-dust left the camps unrecorded and escaped royalty payments, and (3) the fact that in the last few years there has been a small but growing production from the lode mines.

IRON AND STEEL.

INTRODUCTORY.

The war's demands for steel has had the effect of stimulating Canadian production of pig-iron and steel to larger outputs than any previously recorded. This, however, is an industry based largely on iron ores obtained outside of Canada. The actual shipments of iron ores from Canadian mines was less in 1916 than in the previous year, notwithstanding the higher prices in effect, and the total was less than 14 per cent of the entire iron ore consumption in blast furnaces and steel plants. The recorded exports and imports of iron and steel products were considerably higher than in either of the two preceding years.

Prices of practically all iron and steel products increased between January and December by amounts ranging from 40 to over 75 per cent as shown by the accompanying monthly price record quoted from the Iron Trade Review of Cleveland.

IRON ORE.

Mining operations have been confined to the Helen and Magpie mines of the Algoma Steel Corporation in the Michipicoten district of Ontario, together with a small production of ilmenite at Ivry-on-the-Lake, Quebec, by the Manitou Iron Mining Company. There was also a shipment of concentrates from the concentrator at Trenton, Ont., produced in previous years from ores derived from the Bessemer and Childs mines in Hastings county.

The total shipments in 1916 were 275,176 short tons valued at \$715,107, as compared with 398,112 tons valued at \$774,427 shipped in 1915.

Of the total shipments in 1916, 134,568 tons were sent to blast furnaces in Canada and 140,608 tons to the United States. The year's shipments included 45,541 tons of hematite; 210,522 tons of roasted ore including both straight siderite and a blende of siderite and high sulphur hematite; 15,904 tons of magnetic concentrates, and 3,209 tons of ilmenite. The 1915 shipments included 205,989 tons of hematite, 132,906 tons of roasted siderite, and 59,217 tons of magnetite (including some ores with an admixture of hematite).

In Quebec the Manitou Iron Mining Company operated their ilmenite mine at Ivry-on-the-Lake, Terrebonne county, the ore being taken out under contract and shipped to Niagara Falls, N.Y.

In Ontario the Algoma Steel Corporation continued to operate the "Helen" and "Magpie" mines in the Michipicoten district. From the Helen mine there was shipped during the year 109,685 short tons of which 45,541 tons were shipped to the Sault furnaces and 64,424 tons of high sulphur ore to the Magpie roaster. This Helen high sulphur ore is mixed with Magpie raw ore and then roasted producing a very desirable Bessemer ore. The shipments from Magpie were 210,522 short tons of roasted ore, including 65,351 tons of the blended ore just mentioned. Of the total Magpie shipments 121,495 tons went to Lake Erie ports to fill contracts with United States furnace companies and the balance to the Company's furnaces at Sault Ste. Marie.

No shipments were made from the Moose Mountain mines at Sellwood, Ont., owned by Moose Mountain, Ltd., but experimental work was being carried on at the property with a view to securing a suitable agglomerating method for treating the concentrates. It was anticipated that shipments might be resumed in July of 1917.

The mines of the Canada Iron Mines, Ltd., "Bessemer" and "Childs" in Mayo township, and "Coe Hill" in Wollaston township, as well as the magnetic concentrating plant at Trenton, remained idle throughout 1916. The entire remaining stock of concentrates at Trenton (15,904 short tons) was shipped to Buffalo during the early part of the year.

EXPORTS AND IMPORTS OF IRON ORE.

According to returns received direct from the mine operators, 140,608 tons of ore were shipped to the United States during 1916, as against 89,730 tons in 1915, and 60,414 tons in 1914, these being the total shipments outside of Canada. The Department of Customs reports the exports during these three years as 161,260 tons in 1916, 79,770 tons in 1915, and 135,451 tons in 1914. The United States Department of Commerce reports the imports of iron ore into the United States from Canada during the same three years as 153,255 short tons in 1916, 94,219 tons in 1915, and 58,816 tons in 1914.

There were charged to Canadian blast furnaces in 1916, 1,964,598 tons of imported ores as compared with 1,463,488 tons in 1915. The annual consumption of imported ores in blast furnaces, which previous to 1912 was the only record of imports, is shown in the Table "Iron Ore, Fuel and Flux charged to Blast Furnaces."

The total quantity of imported ores thus consumed since 1896 has been 19,408,894 tons. The imported ores charged in 1916 included 914,194 tons from Wabana, Newfoundland, and 1,050,404 tons of "Lake Ores."

The imports during 1916 according to the records of the Customs Department were 2,339,677 tons valued at \$4,419,013, as compared with 1,504,113 tons valued at \$2,331,755 imported in 1915. The 1916 imports included 1,364,992 tons valued at \$3,463,419 from the United States, and 974,685 tons valued at \$955,594 from Newfoundland.

The iron ore deposits at Wabana, Newfoundland, are owned and operated by the two Canadian companies operating coal mines and steel plants at Sydney and Sydney Mines, Cape Breton. The shipments from Wabana mines during 1916 were 1,012,060 short tons, all of which went to Cape Breton. The total shipments from Wabana since the mines were first operated in 1895 have amounted to 16,537,696 short tons of which 10,738,941 tons were sent to Nova Scotia, 2,078,197 tons to the United States, and 3,720,558 tons to Great Britain and Europe.

A record of the tonnage of iron ores received from the United States is presented in the table "Exports of Iron Ore from the United States to Canada" compiled from the "United States Report of Commerce and Navigation." According to this record the exports to Canada during the twelve months ending June 1916 were 1,033,930 short tons valued at \$2,790,498, as against 455,869 short tons valued at \$1,277,247 during the previous year.

IRON ORE PRICES.

The prices of Canadian iron ores are naturally based on prices current in the United States. "Lake Ores," that is those originating in what is generally known as the Lake Superior iron region, which contributes about 80 per cent of the iron and steel requirements of the United States, are quoted per gross ton delivered at Lake Erie ports. Ore prices and freights are usually fixed at the beginning of each season, and the price of any individual ore then depends on its variation from the standard in iron and phosphorus content, etc.

The urgent demand for iron ore by United States blast furnaces during the later months of 1915 resulted in general buying for 1916 delivery early in December and the fixing of prices for 1916 at 70 cents in advance of the 1914 and 1915 quotations. An increase in Lake ore shipments of 41 per cent in 1916 over 1915 almost completely exhausted stocks at the end of the year and the buying season for 1917 started on November 22, 1916, when prices were fixed for 1917 at \$1.50 in advance of 1916 quotations. This advance includes an increase in Lake freights of 50 cents per ton from the head of the lakes, or double the rates in force during 1916.

Bessemer ores are quoted on the basis of 55 per cent iron natural and 0.045 per cent phosphorus dried at 212° F. The base for Non-Bessemer ores is 51.5 per cent iron natural.

Iron ore prices per gross ton during the past four years have been as follows:—

19	14 & 1915	. 1916.	1917.
Old Range Bessemer	\$3.75	\$4.45	\$5.95
Mesabi Bessemer	3.50	4.20	5.70
Old Range Non-Bessemer	3.00	3.70	5.20
Mesabi Non-Bessemer	2.85	3.55	5.05

Since 1900 the price of Old Range Bessemer ores has ranged between a minimum of \$3.00 in 1904 and a maximum of \$6.48 in 1900, non-Bessemer ores being generally from 50 to 80 cents lower. From 1883 to 1908 the price of "Old Range" ore varied during each season, which is not indicated in the accompanying table of "Selling Price of Iron Ore and Price of Pig-iron at Date of Buying Movement."

Ore prices in eastern United States are generally quoted at a rate per unit delivered eastern Pennsylvania points on tidewater. Thus in 1914 and 1915, Newfoundland, Nova Scotia, and New Brunswick ores sold in this market, would bring from 6 to 8 cents per unit, or per cent of iron. The 1916 prices ranged from 8 to $8\frac{1}{2}$ cents per unit for 50% to 65% ore. Quotations in this market for Port Henry ores are in March 1917 from 10.50 to 11.75 cents per unit for ores carrying 58% to 65% iron.

The following record published by the "Iron Trade Review," of Cleveland, O., shows the annual selling price of "Lake iron ore," and the price of pig-iron at the date of buying movement.

^{*}Iron Trade Review, November 30, 1916, p. 1108.

LAKE FREIGHT RATES.

Lake freight rates on iron ore from upper lake ports to Lake Erie, during the past four years have been as follows, in cents per ton:—

		1914.	1915.	1916.	1917.
From	Escanaba, Mich	35c.	25c.	35c.	75c.
99	Marquette, Minn	. 45	35	45	90
29	the head of the Lakes	. 50	40	50	100

The Marquette rate which covers shipments from Michipicoten fell from a maximum of 94 cents in 1900 to a minimum of 35 cents in 1915. The 1917 rate approaches very closely to the record.

Shipments from Key Harbour (Moose Mountain ore), have been at the Escanaba rate or 10 to 15 cents lower than Michipicoten.

The above rates are quoted net, there is an additional unloading charge of 10 cents per ton.

IRON ORE PRODUCTION IN THE UNITED STATES.

The total shipments of iron ore from the Lake Superior district during 1916, including both rail and water shipments, were 66,658,466 gross tons, as compared with 47,272,751 tons shipped in 1915, an increase of 41 per cent. The shipments in 1914 were 32,729,726 tons; in 1913, 49,947,116 tons; and in 1912, 48,221,546 tons.

The total production of iron ore in the United States from all sources was in 1916, 75,500,000 gross tons as compared with 55,493,100 gross tons in 1915; 41,439,761 gross tons in 1914, and 61,980,437 gross tons in 1913.

During the past twenty years the Lake Superior district has supplied from 80 to 85 per cent of the total United States production.

PIG-IRON.

The total production of pig-iron in 1916, not including the output of ferro-alloys which is separately tabulated, was 1,169,257 short tons (1,043,979 long tons), valued at \$16,750,898, as compared with 913,775 short tons (815,870 long tons), valued at \$11,374,199 in 1915, showing an increase of 255,482 tons, or $27 \cdot 9$ per cent.

The 1916 production was greater than that of any previous year, the second largest production of pig-iron having been 1,128,967 short tons in 1913.

The production in Nova Scotia in 1916 was 470,055 tons, as against 420,275 tons in 1915, an increase of 49,780 tons or $11 \cdot 8$ per cent; while the production in Ontario was 699,202 tons in 1916, compared with 493,500 tons in 1915, an increase of 205,702 tons, or $41 \cdot 7$ per cent.

Of the total output in 1916, 17,304 tons were made with charcoal as fuel, as against 13,692 tons made with charcoal in 1915.

By grades the 1916 production included: Basic 953,627 tons; Bessemer 31,388 tons; Foundry and Malleable, etc., 184,242 tons. The 1915 production included: Basic 739,613 tons; Bessemer 29,052 tons; Foundry and Malleable, etc., 145,110 tons.

The annual production of pig-iron by provinces and by grades is shown in the following tables. The values placed upon the Nova Scotia production are nominal, the greater part of the production being used in the steel plants.

There has been no production of pig-iron in the Province of Quebec during the past five years. Formerly this Province had a continuous though small production of charcoal iron which commanded a high price. The three small furnaces at Radnor Forges and Drummondville, at which this production was made, are now reported as abandoned.

Annual Production of Pig-Iron by Provinces, 1887-1916.

^{*}From "The Iron Age", New York.

Previous to 1896, pig-iron was made entirely from Canadian ores. Since that date, however, increasing quantities of imported ore have been used as well as imported fuels and fluxes. In 1916 about 90 per cent of the ore charged, 52 per cent of the coke, and a large proportion of the limestone were imported. In 1915 about 83 per cent of the ore charged and 46 per cent of the coke, and in 1914 about 88 per cent of the ore and 64 per cent of the coke, were imported.

The iron industry at Sydney and North Sydney has been built up on the basis of the Newfoundland Wabana ores and the local coal supply, while in recent years a portion of the limestone required has also been obtained from Port au Port, Newfoundland. In Nova Scotia, therefore, while the fuel is all domestic, the ore is practically all imported, though from a British colony.

In Ontario large quantities of United States "Lake ores" are used. All the fuel used, with the exception of a small quantity of charcoal, is imported, either as coke, or as coal for charging the by-product coke ovens at Sault Ste. Marie. A portion of the limestone flux is also obtained from quarries situated in the United States. In 1916 Ontario furnaces used 1,050,404 tons of imported ores and 221,773 tons of Canadian ores, the

percentage being 82.6 per cent imported and 17.4 per cent Canadian. In 1915, 623,094 tons of imported ore, or 68 per cent of the total, and 293,305 tons, or 32 per cent of Canadian ores, were charged. In 1914, 865,004 tons or 82.5 per cent of imported ore, and 182,964 tons, or 17.6 per cent of Canadian ores, were charged.

^{*}Includes for the first ten years small quantity of coal.

IRON BLAST FURNACES IN CANADA IN 1916.

Of 20 furnaces 14 were in blast in 1916, for varying periods of time. The total daily capacity of the 20 furnaces is about 5,135 tons. The operating companies, with numbers and capacities of furnaces, were as follows:—

Dominion Iron & Steel Co., Sydney, C.B. Six completed furnaces of 280 tons capacity each per day; three operated throughout 1916, one for 257 days, and one for 122 days, one furnace idle throughout the year.

Nova Scotia Steel & Coal Co., Ltd., New Glasgow, N.S. Two stacks and one set of stoves at Sydney Mines, C.B., of 300 tons capacity each, operated throughout 1916.

Londonderry Iron & Mining Co., Ltd., Londonderry, N.S. (in liquidation). One furnace of 100 tons capacity; idle throughout the year, not operated since 1908.

Canada Iron Foundries, Ltd., Montreal, Que. Two furnaces of 125 tons and 250 tons at Midland, Ont., both idle throughout the year, not operated since 1913.

Standard Iron Co., Ltd., Deseronto, Ont. One furnace at Deseronto with a daily capacity of 65 tons, operated throughout 1916; one furnace of 65 tons at Parry Sound, idle throughout the year, not operated since 1913.

The Steel Co. of Canada, Ltd., Hamilton, Ont. Two furnaces, one of 260 tons capacity, operated for 353 days in 1916; a second furnace of 430 tons capacity operated 296 days.

Algoma Steel Corporation, Ltd., Sault Ste. Marie, Ont. Three furnaces at Steelton, near Sault Ste. Marie, two of 280 tons capacity each and one of 500 tons capacity, operated throughout the year.

The Atikokan Iron Co. Ltd., Port Arthur, Ont. One furnace of 175 tons capacity, idle throughout the year, not operated since 1911.

The Canadian Furnace Co. Ltd., Port Colborne, Ont. One furnace of 325 tons capacity, operated 316 days in 1916.

EXPORTS AND IMPORTS OF PIG-IRON.

The total exports of pig-iron and ferro-alloys during 1916, were 46,106 tons valued at \$1,726,396 and included 23,304 tons of pig-iron valued at \$374,383, or an average of \$16.07 per ton, and 22,802 tons of ferro-alloys valued at \$1,352,013, or an average of \$59.29 per ton.

The total exports during 1915 were 26,545 tons, and included 17,307 tons of pig-iron valued at \$231,551, or an average of \$13.38 per ton, and 9,238 tons of ferro-alloys valued at \$537,081, or an average of \$58.14 per ton.

The exports between 1905 and 1913 did not exceed 10,000 tons in any one year, and consisted largely, if not entirely, of ferro-alloys. During 1914, however, there was a small export of pig-iron, chiefly from Sydney to Philadelphia. The exports during the first three months of the year were 4,431 tons, which probably included about 4,000 tons of pig-iron. From the first of April the exports were separately classified and during the last nine months of the year included 9,767 tons of pig-iron valued at \$118,111, or an average of \$12.09 per ton, and 4,865 tons of ferro-alloys valued at \$285,221, or an average of \$58.63 per ton.

Considerable quantities of pig-iron are annually imported into Canada. During the calendar year 1916 the total imports of pig-iron, excluding ferro-products which are separately stated, were 58,130 tons valued at \$1,145,150, and included 57,256 tons valued at \$1,129,799, or an average of \$19.73 per ton, from the United States, 594 tons valued at \$10,614 or an average of \$17.87 per ton from Great Britain and 280 tons valued at \$4,737 or an average of \$16.91, from other countries.

During 1915 the total imports of pig-iron were 47,482 tons, valued at \$624,200, and included 46,894 tons, valued at \$615,268, or an average of \$13.12 per ton, from the United States, and 588 tons valued at \$8,932, or an average of \$15.19 per ton, from Great Britain.

FERRO-PRODUCTS.

Ferro-alloys including ferro-silicon, ferro-molybdenum, and ferrophosphorus, were produced in Canada in electric furnaces during 1916, the total production being 28,628 tons valued at \$1,777,615.

The total production of ferro-alloys during 1915, was 10,794 tons valued at \$753,404, as against a production of 7,524 tons valued at \$478,355 in 1914, and 8,075 tons valued at \$493,018 in 1913. In 1912 the production was 7,834 short tons valued at \$465,225, and in 1911, 7,507 short tons valued at \$376,404.

The exports of ferro-silicon and ferro-compounds during the calendar year 1916, as already stated, were 22,802 tons valued at \$1,352,012, or an average of \$59.29 per ton, as against exports in 1915 of 9,238 tons valued at \$537,081, or an average of \$58.14 per ton. During the nine months ending December 1914, the exports were 4,865 tons valued at \$285,221. Previous to April 1, 1914, the exports of ferro-alloys were included with pig-iron.

The imports of ferro-silicon, ferro-manganese, etc., during the calendar year 1916, were 14,777 tons valued at \$1,879,538, and included 7,875 tons valued at \$995,987 from Great Britain, and 6,902 tons valued at \$883,551 from the United States. The total imports included 1,572 tons of ferro-silicon valued at \$42,291, and 13,205 tons of spiegeleisen, ferro-manganese, and other ferro-alloys valued at \$1,837,247.

^{*}From 1887 to 1894 inclusive, these amounts include: ferro-manganese, ferro-silicon, spiegel, steel bloom ends and crop ends of steel rails, for the manufacture of iron and steel.

†From 1895 to date, ferro-silicon, spiegeleisen, and ferro-manganese and other ferro-alloys.

CONSUMPTION OF PIG-IRON AND FERRO-ALLOYS.

The total quantity of pig-iron and ferro-alloys used in Canada, arrived at by adding to the production the excess of imports over exports, amounted, in 1916, to 1,224,686 tons, as against 959,254 tons in 1915. Of the total amount consumed in 1916, 975,384 tons are reported as having been used in steel furnaces, leaving 249,302 tons of iron available for foundry and other uses. The consumption of steel furnaces included 949,444 tons of pig-iron and 25,940 tons of ferro-alloys.

The annual consumption since 1910 is shown in the following table:—

Consumption of Pig-Iron and Ferro-alloys.

^{*}Production of pig-iron and ferro-alloys plus excess of imports over exports.

STEEL.

Production of steel during 1916 has been reported from 24 separate plants (including 7 electric furnace plants) operated by 21 companies.

The total production of steel ingots and castings during the year was 1,428,249 short tons, as compared with 1,020,896 tons in 1915, and 828,641 tons in 1914. The increase in 1916 over the previous year was 407,353 tons or nearly 40 per cent. The highest previous production was 1,168,993 tons in 1913. The 1916 production included, according to returns furnished: openhearth ingots 1,377,387 tons; Bessemer ingots 1,416 tons; electric steelingots 17,939 tons; other steels 961 tons; direct castings open-hearth 23,496 tons; electric 1,700 tons; other castings 5,350 tons. The 1915 production included: open-hearth ingots 962,411 tons; Bessemer ingots 19,448 tons; electric steel and other ingots 7,970 tons; direct open-hearth castings 28,384 tons, and other direct castings 2,683 tons. The total production of electric steel in 1916 was 19,639 tons, as against 5,625 tons in 1915, and 61 tons reported for 1914.

Statistics of the production of steel ingots and castings since 1894 are given in the following table, the figures for 1894 to 1906 inclusive having been collected and published by the American Iron and Steel Association; those for the years 1907 to 1916 have been collected by this Department.

Materials charged to steel furnaces.—The total quantity of pig-iron used in steel furnaces during 1916 was 949,444 tons, of which 871,212 tons were produced by the firms reporting, and 78,232 tons purchased. The quantity of ferro-alloys used was 25,940 tons, all purchased. The total quantity of scrap iron and steel used was 679,162 tons, of which 382,427 tons originated with the firms reporting, and 296,735 tons were reported as purchased. Ores used included 1,578 tons of manganese ore and 55,059 tons of iron ore, while 224,772 tons of limestone and dolomite were used, and 13,213 tons of fluorspar. In Ontario, about 1,154 million cu. ft. of natural gas were used, while in Nova Scotia coke oven gas was used at Sydney, of which a record of quantity was not obtained.

A record of materials used in steel furnaces covering the past seven years is shown in the following table:—

Pig-Iron, Scrap Iron, and Other Materials Charged to Steel Furnaces.

(IN SHORT TONS.)

Year.	Pig-iron.	Ferro-alloys	Scrap iron and steel.	Iron ore.	Manganese ore.	Fluorspar.	Limestone and dolomite.
1910 1911 1912 1913 1914 1915	690,913 700,769 735,559 913,722 619,030 748,114	8,143 21,359 24,237 29,408 20,252 13,941 25,940	211,453 278,797 336,265 406,403 286,863 413,266 679,162	39,332 42,892 43,006 55,018 37,686 74,872 55,059	1,317 829 985 1,342 723 908 1,578	7,461 8,067 9,709 10,687 7,845 13,520	130,270 148,045 197,028 114,859 252,045

It will be noted that there is a large consumption of scrap iron and steel in the manufacture of steel ingots and castings. For each 100 tons of pig-iron used in 1916 the quantity of scrap charged was 71.5 tons. In 1915 the proportion was $55 \cdot 2$ tons of scrap to 100 tons of pig, and in 1914 it was $46 \cdot 3$ tons of scrap to 100 tons of pig.

The exports of scrap iron and steel in 1916 are reported as 114,300 tons valued at \$1,357,018, or an average of \$11.87 per ton, as against exports in 1915 of 89,358 tons valued at \$883,134, or an average of \$9.88 per ton.

There has been considerable variation in the export of scrap, but during the past three years the exports have greatly increased, as shown in the accompanying table.

The total imports of scrap iron and steel in 1916 is recorded by the Customs Department as 11,574 tons valued at \$179,751, or an average of \$15.53 per ton, as against imports in 1915 of 11,477 tons valued at \$127,614, or an average of \$11.12 per ton.

The imports of scrap during the past three years have been comparatively small, compared with the annual imports during the previous twenty years.

Rolling Mill Production.—Statistics of the production of rolled iron and steel products have been received from all firms operating rolling mills in Canada. The principal rolled products are, in addition to blooms and billets, steel rails, wire rods, bars and rods, and a small tonnage of plates. There is practically no production of structural steel. Other products manufactured at these plants include forgings, angle splice bars, rail fastenings, nails and spikes, wire and wire fencing, and many other classes of finished products of which a detailed record is not obtained.

The quantity of steel used by rolling mills in 1916 included 1,360,797 tons of ingots produced by firms reporting; 83,090 tons of ingots, blooms and billets purchased; and 130,734 tons of scrap iron and steel. In 1915 the quantity of steel used included 1,033,682 tons of ingots produced by firms reporting; 21,975 tons of ingots, blooms and billets purchased; and 57,051 tons of scrap iron and steel. The production in 1916 included: steel rails, 90,123 tons; wire rods 179,226 tons; bars and plates 619,500 tons; forged products, etc., 152,668 tons. The production in 1915 included: steel rails, 232,411 tons; wire rods 124,381 tons; bars and plates 294,595 tons; forged products, etc., 34,358 tons. In addition to the above there was also a small production of billets for export.

The annual production of rolling mills in so far as returns have been furnished to this Department, was as follows:—

Annual Production of Rolling Mills.

The record of production of finished rolled iron and steel in Canada, collected and published by the American Iron and Steel Institute and the American Iron and Steel Association, which covers a longer period of time and is possibly more complete than that given above, is shown in the following tables quoted from the annual Statistical Report of the American Iron and Steel Institute for 1915 and special Statistical Bulletin No. 4, 1917.

^{*} Includes a few tons of iron rails.

Steel Billets.—A record of monthly prices of mild steel billets at Montreal as quoted by The Dominion Iron & Steel Company, is shown in an accompanying table.

During 1916 prices steadily increased, quotations in January and February being from \$38.50 to \$40.50 per gross ton, and in December from \$52 to \$55 per gross ton.

In Pittsburgh, open-hearth billets averaged \$32 per gross ton in January, increasing to \$45 in April and May. There was a slight decrease during the next three months, followed by further increases to a maximum monthly average of \$57.50 in December.

¹Compiled from the annual records of wholesale prices published by the Department of Labour.

^{*}As compiled and published by "The Iron Age," New York.

Exports and Imports.—The Dominion Iron & Steel Company, has, during the past three years, been making some export of steel billets for European demand, but as yet the Department of Customs has not published any separate record thereof.

There has been a considerable annual importation, as shown in the accompanying tables, of iron and steel billets, and of iron and steel ingots, blooms, slabs, puddled bars, etc. Unfortunately the record for 1916, and possibly also that for 1915, is not complete, large quantities having been imported as "Munitions" and not separately classified.

The export records¹ of the United States, for the year 1916 at least, give a more complete record. According to this authority there was exported from the United States to Canada during the calendar year 1916, billets, ingots and blooms of steel 105,420 gross tons (118,070 short tons) valued at \$6,662,860 or an average of \$56.43 per short ton, as against corresponding exports in 1915 of 58,486 gross tons (65,504 short tons) valued at \$1,528,155 or an average of \$23.33 per short ton, and exports in

¹ Monthly Summary of Foreign Commerce of the United States, Department of Commerce, Washington, D.C.

1914 of 14,325 gross tons (16,044 short tons) valued at \$311,267, or an average of \$19.40 per short ton.

The second following table shows for a number of years the exports of billets, ingots and blooms of steel from the United States to Canada. The principal differences between this and the Canadian record appear to be for the year 1916.

Steel Rails.—The production of steel rails in Canada in 1916 was 90,123 short tons, as against 232,411 tons in 1915, and was the smallest output since 1904. The annual production from 1905 to 1915 varied between 200,000 tons and 500,000 tons per annum.

There is no record of exports of steel rails, although in recent years such exports have been made to South Africa and to the United States.

The imports of steel rails during 1916 is recorded by the Customs Department as 11,227 short tons valued at \$344,802. This record, however, is possibly not complete, since the United States Department of Commerce reports the exports of steel rails from the United States to Canada during the same period as 46,011 tons valued at \$1,586,639.

The annual imports of steel rails, as shown in the following table, from 1895 to 1905 ranged between 50,000 and 212,000 tons, averaging about 125,000 tons. From 1906 to date, however, or since the establishment of rail mills at Sydney and Sault Ste. Marie, the imports have fallen to an annual average of 60,000 tons, the variation being between a minimum of 10,420 tons in 1915 and a maximum of 177,041 tons in 1913.

*9 months. (a) Iron and steel railway bars or rails of any form, punched or not, n.o.p., for railways, which term, for the purposes of this item, shall include all kinds of railways, even although they are used for private purposes only, and even although they are not used or intended to be used in connexion with the business of common carrying of goods or passengers. (b) Fish plates and tic-plates from 1895 to 1907 inclusive.

**See text explanations and compare with preceding table.

Wire Rods.—The production of wire rods in Canadian rolling mills has shown a further increase in 1916 amounting to 179,226 tons, as against 124,381 tons in 1915, and 63,856 tons in 1914. From 1908 to 1914 inclusive, the average annual production was about 70,000 tons. The imports of wire rods in the coil in 1916 were 66,166 tons valued at \$3,069,162, or \$46.39 per ton, as compared with imports in 1915 of 71,839 tons valued at \$1,695,842 or \$23.60 per ton, and imports in 1914 of 65,250 tons valued at \$1,472,597, or \$22.57 per ton. The annual imports have varied between rather wide limits, as shown by the following table, the highest figure having been reached during the fiscal year of 1913, with a total of 91,919 tons.

The average monthly price of wire rods in Pittsburgh in 1916 advanced from \$43 per gross ton in January to \$60 during April and May, receding slightly during the next five months, but increasing to an average of \$68.75 per ton in December.

EXPORTS AND IMPORTS OF IRON AND STEEL GOODS.

Canada imports large quantities of iron and steel, much larger quantities than are manufactured in domestic steel mills. Reference has already been made to exports and imports of a few specific products; the following, however, is a general summary of the available records relating to exports and imports of iron and steel as compiled from the reports of the Customs Department. Mention has already been made of the fact that some of these records, such as imports of billets, etc., are incomplete, because there have been large imports for the manufacture of munitions that have not been entered under the usual classifications but have been included in one general item with many other products. This fact should be kept in mind in analysing the statistics, since it may explain a number of apparent discrepancies between these records and those available from other sources, such, for instance, as the United States Department of Commerce records of foreign trade.

The exports of iron and steel from Canada have consisted chiefly of manufactured goods, such as agricultural implements, automobiles, bicycles, machinery, etc. During the past two years, however, there have been considerable exports of steel rails, billets, rods, and wire products.

The total recorded value of iron and steel exported during the calendar year 1916 was \$63,837,681, as compared with a value of exports in 1915 of \$48,268,148, and in 1914 of \$14,391,746.

The exports during 1916 included: pig-iron and ferro-alloys 46,106 tons valued at \$1,726,396; scrap iron and steel 114,300 tons valued at \$1,357,018; wire and wire nails 122,526 tons valued at \$8,597,320; agricultural implements valued at \$3,705,927; automobiles and bicycles, \$6,807,499; other manufactures of iron and steel, \$41,643,521.

The exports during 1915 included: pig-iron and ferro-alloys, 26,545 tons valued at \$768,632; scrap iron and steel 89,358 tons valued at \$883,134; wire and wire nails 71,998 tons, valued at \$3,224,740; agricultural

implements, valued at \$3,417,060; automobiles and bicycles, \$7,139,712; other manufactures of iron and steel, \$32,834,870.

The exports during 1914 included: pig-iron and ferro-alloys 19,063 tons, valued at \$486,366; scrap iron and steel 35,405 tons, valued at \$446,337; wire and wire nails 9,663 tons, valued at \$355,781; agricultural implements, valued at \$5,788,899; automobiles and bicycles, \$3,409,749; other manufactures of iron and steel, \$3,904,614.

The exports during 1913 in similar groupings were: pig-iron and ferroalloys 6,326 tons, valued at \$351,646; scrap iron and steel 45,556 tons, valued at \$483,813; agricultural implements valued at \$7,411,246; automobiles and bicycles, \$3,630,964; other manufactures of iron and steel, \$2,121,480.

A detailed record of these exports during the past four years is shown in the accompanying tables:—

^{*}Agricultural implements, automobiles, and bicycles included in 1909 and subsequent years.

Separate records, covering a period of years, of the annual exports of pig-iron and ferro-alloys and of scrap iron and steel have already been given on previous pages.

The total value of the imports of iron and steel goods during the calendar year 1916, subject to the explanation already made in respect to certain products not recorded under the usual and regular classification and there-

fore omitted from this record, was \$129,090,241, as compared with a value of \$74,308,983 imported during the calendar year 1915, \$80,063,679 imported during 1914, and \$145,226,972 imported during 1913. Previous to 1913 the record is shown covering the fiscal years. During the twelve months ending March, 1913, the imports were valued at \$148,579,272, as against imports valued at \$105,614,450 during the twelve months ending March, 1912.

Between 1895 and 1904, the imports of iron and steel increased from about \$8,600,000 to over \$40,000,000. During the next five years there was comparatively little change, but from 1909 to 1913 the increase was again very rapid. During the latter part of 1913 there was, however, a distinct check to imports with the heavy falling off shown in 1914 and 1915. A detailed statement of the imports of iron and steel during the calendar years 1915 and 1916 is shown in the general tables of imports of iron and steel goods following.

The imports during 1916 subject to duty were valued at \$107,863,317, the imports free of duty during the same period being valued at \$21,226,931. The imports during 1915 subject to duty were valued at \$62,842,171 and the imports free of duty during the same period were valued at \$11,466,812. These imports include all classes of manufactured iron and steel goods as well as those of cruder form. In many cases the values only of the imported goods are given, so that a total tonnage of imports cannot be stated. In the case of most of the cruder materials, however, the quantities are given and a compilation of these showing the importation of the cruder forms of iron and steel since 1909 is shown in the accompanying tables. Thus, during the twelve months ending December, 1916, there were imported 864,916 tons of iron and steel valued at \$52,114,258, or an average of \$60.25 per ton, together with other iron and steel goods of which the quantities are not stated, valued at \$76,975,910.

During the twelve months ending December, 1915, there were imported 771,007 tons of iron and steel valued at \$27,504,685, or an average value per ton of \$35.67, together with other iron and steel goods of which the quantities are not stated, valued at \$46,804,298.

Summary of Imports of Iron and Steel,* 1915 and 1916.

A very large proportion of the imports of iron and steel into Canada having been derived from the United States, a record has been compiled from the annual report of Commerce and Navigation of the United States published at Washington, showing the exports of iron and steel goods from that country to Canada.

According to this authority there was exported to Canada from the United States during the twelve months ending June 30, 1916, 992,563 tons of iron and steel goods, valued at \$39,723,162, together with other iron and steel goods, the weight of which is not given, valued at \$55,442,713, or a total value of \$95,165,875.

During the twelve months ending June 30, 1915, the corresponding exports to Canada were 596,323 tons of iron and steel goods valued at \$19,697,148, together with other iron and steel goods, the weight of which is not given, valued at \$28,713,872, or a total value of \$48,411,020.

During the twelve months ending June 30, 1914, the exports to Canada were 1,169,349 tons of iron and steel goods, valued at \$35,921,812, together with other iron and steel goods of which the weight is not given, valued at \$40,780,471, or a total value of \$76,702,283.

During the twelve months ending June 30, 1913, exports to Canada were 1,695,916 tons of iron and steel goods, valued at \$51,936,616, together with other iron and steel goods of which the weight is not given, valued at \$54,673,774, or a total value of \$106,610,390.

During the twelve months ending June 30, 1912, exports to Canada were 1,175,464 tons, valued at \$36,637,305, together with other iron and steel goods, valued at \$46,020,989, or a total value of \$82,658,294.

LEAD.

The production of lead in Canada in 1916 amounted to 41,497,615 pounds valued at \$3,532,692, as compared with 46,316,450 pounds valued at \$2,593,721 in 1915, a decrease of 10.4 per cent in quantity, but an increase of 40.0 per cent in value.

The statistics of lead production since 1909 as given in the accompanying table represent the quantity of refined lead produced in Canada from domestic ores, together with a small quantity of lead contained in lead ores or bullion exported. The production has been mainly from British Columbia with occasional small amounts from other provinces and the Yukon Territory.

^{*}In 1909 and 1910, average prices at Toronto as quoted by Hardware and Metal, in previous years average prices at New York, as quoted by Engineering and Mining Journal.

†Average price at Montreal. Quotations furnished by Messrs. Thos. Robertson & Co., Montreal, Que.

For a number of years there has been a very wide divergence between the record of lead recovery and the statements of lead contained in ores shipped from the mines. While the difference is due in part to smelter losses, there was also, during 1912 and 1913 especially, a considerable accumulation of lead ores at the Trail smelter. In 1915, however, the recovery of lead in smelters was but little less than that contained in ores shipped from mines, apparently indicating a reduction in stocks of ores at the smelter, but in 1916 the metal contents of lead ores shipped from mines exceeded by far the recovery in smelter.

	88,647	48,708,005	2,954,175
	84,516	54,124,628	2,582,952

Previous to 1904 lead ores mined in Canada were either exported as ore or smelted in Canadian furnaces and exported in the form of base bullion to be refined abroad. A lead refinery employing the Betts electrolytic process has been in operation at Trail, B.C., since 1904, treating the base bullion produced by the lead blast furnaces.

The North American Smelting Company erected a plant at Kingston, Ontario, which started operations during the latter part of 1912, treating scrap and lead dross, as well as ores from the United States, British Columbia, and Ontario. This plant closed down November 1, 1913, but operations were resumed during the latter part of 1916 by the Kingston Smelting Co., Ltd., under lease.

The Estate of James Robertson, operating the Kingdon Lead Mine at Galetta, put in a 20-ton open-hearth lead furnace which was operated in October and November, 1916.

Refined Lead Produced.

Year.	Pounds of refined lead produced.	Year.	Pounds of refined lead produced.	Year.	Pounds of refined lead produced.
1904. 1905. 1906. 1907.	7,519,440 15,804,509 20,471,314 26,607,461 36,549,274	1910 1911	41,883,614 32,987,508 23,525,050 37,008,490	1913 1914. 1915. 1916.	39,663,766 36,443,706 43,518,618 43,100,236

^{*}The refined lead reported includes also that from foreign ores.

Prices.—The average price for soft lead in 1916 on the London market was £30 19s 6d, as compared with £22 17s 10d in 1915, and £18 13s 9d in 1914.

The price of lead at Montreal, the main Canadian market, has been higher than the New York and London values for the past four years. The average price of lead at Montreal in 1916 was 8.513 cents per pound, as against 6.858 cents in New York, 6.777 cents in St. Louis, and 6.715 cents in London. In 1915 the Montreal price was 5.600 cents per pound, as against 4.673 cents in New York, 4.567 cents in St. Louis, and 4.979 cents in London.

The Toronto price in winter is about the same as that at Montreal, but the latter falls during the period of summer freight rates, about 10 cents per 100 pounds below the former.

‡As published by the Metal Information Bureau, London.

Exports.—The exports of lead in 1916 amounted to 9,160,500 pounds, valued at \$565,890, and consisted of pig-lead 112,100 pounds, valued at \$7,710, and lead in ores, concentrates, bullion, etc., 9,048,400 pounds, valued at \$558,180. A few thousand tons of base bullion were exported from Trail, B.C., for refining in the United States, which fact explains the large increase in exports for 1916.

The exports in 1915 amounted to 3,912,029 pounds, valued at \$119,340, and consisted of pig-lead 2,066,929 pounds, valued at \$79,067, and lead in ore, concentrates, etc., 1,845,100 pounds, valued at \$40,273.

Exports of Lead, 1910 to 1916.

Consumption.—The production of lead, as already stated, was in 1916, 20,749 tons, while the exports were 4,580 tons, leaving a balance of 16,169 tons; by adding this amount to the 13,580 tons of imports and the manufactures, we get a total consumption for Canada of over 30,000 tons of lead, as against 46,000 tons in 1915, and 29,000 in 1914.

This estimate of consumption for 1916 is probably incomplete because of the fact that very large quantities of materials chiefly for munitions,

and no doubt including lead, have been imported for the use of the Imperial Government. These imports for record purposes have been entered under one general item and not separately classified. Information received from other sources shows that the total consumption in 1916 amounted to at least 55,000 tons.

Estimated Consumption of Lead.

Year.	Tons.	Year.	Tons.	Year.	Tons.
1908 1909 1910	25,000	1911 1912 1913	39,000	1914	46,000

Quebec.

The production of lead in Quebec during 1916 amounted to 698,760 pounds, valued at \$59,485, as against 40,401 pounds, valued at \$2,262 in 1915. This production was wholly from the zinc-lead deposits of Notre-Dame des Anges.

Ontario.

The Ontario production of lead in 1916 was 685,932 pounds, valued at \$58,393, as against 88,985 pounds, valued at \$4,983 in 1915. The two principal producers were: the property of the James Robertson Estate at Galetta, and the Hollandia Mine at Bannockburn.

British Columbia.

The production of refined lead together with lead in ores exported amounted in 1916 to 39,157,701 pounds, valued at \$3,333,496, as against 45,377,064 pounds, valued at \$2,541,116 in 1915, a decrease of 13·7 per cent in quantity, but an increase of 31·1 per cent in value.

Almost all of the lead ore mined in British Columbia is smelted and refined at Trail, B.C. In 1915 and 1916, however, the Surprise mine shipped its total output, amounting to a considerable tonnage, to the United States.

According to the Provincial Department of Mines, 48,727,516 pounds of lead were contained in the lead ores shipped to the smelters for which returns had been received during 1916.

The record given in the following table for the years 1909 to 1916, inclusive, represents the recovery of lead at smelter or refinery as distintinguished from the figures given for the same year in the table next succeeding, which indicate the quantities of lead contained in ore sent to the smelters.

It will be noticed also that the Fort Steele district produced about 49.6 per cent of the total, the Slocan 29.6 per cent, and Ainsworth about 16.1 per cent.

^{*}From the Report of the Minister of Mines, B.C.

Yukon.

During the last few years, several properties have been developed and have shipped occasionally, but they have been handicapped by the high cost of development and supplies, and by the heavy transportation charges.

The most important operations being conducted during 1916 were in what is known as the "Mayo" area, north of the Stewart river. About 1,500 tons of very rich silver-lead ore were shipped from the Silver King property on Galena creek to the Selby smelter at San Francisco. This area is one of the most important placer gold producing districts of Yukon Territory but valuable lode deposits have also been discovered.

Bounties.—In 1901, and again in 1903, the Dominion Government, to encourage the lead industry, authorized the payment of a bounty on the production of lead. The Act of 1903 provided for the payment, under certain restrictions, of 75 cents per hundred pounds on lead contained in ore mined and smelted in Canada, provided that when the standard price of pig-lead in London, England, exceeded £12 10s per ton of 2,240 pounds, such bounty should be reduced proportionately by the amount of such excess. Thus, when the price of lead in London rose to £16, or over, per long ton, the bounty ceased. As the price of lead exceeded £16 sterling on the London market for a considerable period during 1906 and 1907 the bounty paid during those years was comparatively small.

The Act of 1903 provided that payment of bounty should cease on June 30, 1908, and as only a portion of the funds provided had been used, a new Act was passed in the latter year providing for further bounty payments at the rate of 75 cents per hundred pounds, or approximately £3 10s per ton of 2,240 pounds, subject to the restriction that when the price of lead in London exceeds £14 10s the bounty shall be reduced by such excess.

The Act of 1908 expired in 1913, and a new Act was passed extending the bounty for a further period of five years, with the same provisions. The text of this Act and of the regulations under which the Act is administered may be consulted in the "Annual Report on Mineral Production for 1914," and previous years.

There was no bounty paid on lead during the fiscal year ending March 31, 1917.

MERCURY.

There has been no production of mercury since 1897. The small production reported in 1895 and 1897 was derived from the deposits at the western end of Kamloops lake, B.C. These deposits occur in irregular veins, consisting chiefly of calcite and quartz, with some dolomite, containing pockets of cinnabar in a zone of decomposed Tertiary volcanic rocks.

Elsewhere in Canada mercury has been reported as occurring in ores of the Cobalt district, in the neighbourhood of Field, B.C., and at the eastern entrance to Sechart channel, Barclay sound, Vancouver island.

The imports of mercury during 1916 were 79,204 pounds, valued at \$74,461, as against 184,432 pounds, valued at \$159,184 in 1915.

MOLYBDENUM.

There are numerous mineralogical occurrences of molybdenite in Canada, many of which during the past ten or fifteen years have attracted more or less attention because of the possibility of their development indicating deposits of commercial importance. As a result of this work, small shipments of ore were made in 1902 and 1903. The high prices offered in 1914 and 1915 resulted in an active renewal of this development, but it was not until 1916 that really important contributions have been made to the market demands for this metal. While a large proportion of the 1916 production has been derived from one property at Quyon in the Province of Quebec, nevertheless important contributions have been made from a number of other deposits which, in the aggregate, give promise of increasing contributions to the supply.

The ore produced was chiefly low grade material carrying less than 2 per cent MoS_2 , but included small quantities of ore running from 2 to

15 per cent MoS₂, and some higher grade hand picked material.

The owners of the Quyon mine were authorized to export a portion of their ore for concentration in their own plant at Denver, Col.; with this exception, all of the ore production was concentrated in Canadian mills erected for the purpose, and marketed either as concentrates, ferro-molybdenum, for the manufacture of which two electric furnace plants have been established, or as molybdic acid or ammonia molybdate.

The total production in 1916, representing the MoS₂ contents of concentrates produced was 156,461 pounds which at \$1.00 per pound, the approximate equivalent at Ottawa of the British official price, would have a total value of \$156,461. The actual marketing value would probably exceed this figure since, as already stated, the output was sold in various forms, and some of the concentrates sold in the United States possibly brought a higher price.

The production in 1915 was equivalent to 29,210 pounds of concentrate valued at \$28,450, as compared with a production in 1914 equivalent to

3,814 pounds of concentrate, valued at \$2,063.

Early in 1915 the export of molybdenite to foreign destinations was prohibited except under license. Since September of 1915, the Imperial Government has requisitioned all supplies of molybdenite arriving in the United Kingdom at the price of five pounds, five shillings (105s.) per unit, cost, insurance and freight or ex. warehouse, on the basis of 90 per cent MoS₂, less one per cent brokerage charges. Subsequently the basis was reduced to a minimum of 85 per cent MoS₋₂ The firm of H. H. Watson & Co., Liverpool, was appointed by His Majesty's Government to act as brokers for the purchase of these ores. At a later date the Imperial Munitions Board of Ottawa was authorized to purchase molybdenite in Canada.

Prices in the United States during 1916 for molybdenite concentrates 85 to 90 per cent MoS₂ ranged from \$1.40 to \$1.85 per pound.

Mining.

During 1916 shipments were made from the following properties:—

Pontiac County.—Moss mine near Quyon in Onslow tp., lots 9 and 10, range VII. This has so far proved the most important molybdenite mine developed. Ore shipments were made during 1916 to Denver, Col., to the concentrating plant at Renfrew operated by the International Molybdenum Company, and to the Mines Branch concentration plant, Department of Mines, Ottawa. A concentrating plant was built at the mine and placed in operation, and a second mill was installed at Hull, Que., on the property of the Canada Cement Co., the cement plant ball mills being used for grinding the molybdenite ore. The property was operated by the Canadian Wood Molybdenite Company, and has recently been sold to the Dominion Molybdenite Co., Ltd.¹

Abitibi District.—A small shipment of hand picked ore was made from the property of the Height of Land Mining Company in Preissac tp., south of Amos on the Canadian Government Railways.

ONTARIO

Renfrew County.—Several properties in this county made shipments during 1916 including: the Jamieson mine in the township of Lyndeck, lots 5 and 6, con. VIII, operated by the International Molybdenum Company; the Spain or Legree mine in Griffith tp., lots 30 and 31, con. IV, operated by W. J. Spain, a concentrating mill was erected at this property which was, however, operated but a short time during 1916; Brougham tp., lots 7, 8, and 9, con. XII, operated by the Renfrew Molybdenum Mines, Ltd., a vacuum oil flotation mill was placed in operation just at the close of the year and was producing at the rate of about a ton per week; the Moran and O'Brien properties, Brougham tp., lots 16 and 17, con. XII, operated by M. J. O'Brien of Renfrew; the Ross mine, Brougham tp., lots 1 and 2, con. III, operated by the Aldfield Mineral Syndicate, and sold to Molybdenum Ltd., of Montreal.

Haliburton County.—Mr. George Padwell operated a property near Tory Hill.

Victoria County.—Shipments were made from properties in Somerville tp., and in Laxton tp., operated by Mr. T. Horscroft.

Lennox and Addington Counties.—Shipments were made from the Chisholm mine in Sheffield tp.

¹ Report on the Molybdenite deposits of the Moss mine, Quyon, Que., by Charles Camsell. Summary Report, Geol. Survey, 1916, p. 207.

BRITISH COLUMBIA

West Kootenay District.—The Molly mine at Salmo, B.C., was operated by the International Molybdenum Co., of Orillia, Ont., and the ore shipped to Renfrew, Ont., for concentration.

Skeena District.—A property has been developed at Alice Arm at the head of Observatory inlet, Portland canal, by the Molybdenum Mining and Reduction Co., Ltd. Shipments were made to Renfrew,

Lillooet District.—From the Index claim on Texas creek about 9 tons of ore were shipped to Renfrew.¹

Concentration of Molybdenite.

The concentration of molybdenite ores was undertaken to a greater or less extent in five mills, two of which were operated as Custom plants, and three treated only the ores produced by the operators.

Mines Branch Plant, Ottawa.—The Department of Mines had, through its Ore Testing and Metallurgical Division, already undertaken an investigation of the concentration of molybdenite ores as a result of which a successful water flotation concentration process was developed. Through an arrangement with the Imperial Munitions Board, the plant was increased in size and placed upon a commercial basis, and has been in practically continuous operation throughout 1916. During the year a total of 2,397·4 tons of ore were treated in this plant containing an average of 1·84 per cent MoS₂. There was recovered 43·58 tons of concentrates containing an average of 79·95 per cent MoS₂.

Ores have been purchased on the basis of the following schedule:—
Schedule of Prices governing purchase of Molybdenite Ores and Concentrates Delivered f.o.b. Dominion Government Testing Plant, Ottawa.

Payments will be made upon the following terms:-

- (1) On assay returns from samples dried at 212°F.
- (2) Moisture will be deducted.
- (3) The treatment charge to be \$5.65 per ton of 2,000 lbs. of crude oil.
- (4) The value of molybdenite (MoS₂) to be \$1.00 per pound delivered in Ottawa unless otherwise stated.
- (5) Payments will be made for molybdenite only. No allowance will be made for Molybdite or Wulfenite.
- (6) Payments will be calculated as follows, per ton of 2,000 lbs. dry ore or concentrates, delivered railway siding, Mines Branch Testing Laboratories, Ottawa:—

Report on the Index molybdenite mine, Lillooet, B.C., by Dr. C. W. Drysdale. Summary Report of the Geol. Survey, 1916, p. 54.

Schedule A. Treatment charge \$5.65 per ton.

For	Molybdenite	ores contai	ning:—

Prices on Schedule C to include cost of delivery to Mines Branch, in suitable packages for either local or xport shipment.

The International Molybdenum Company's Mill, Renfrew:—

The International Molybdenum Company built a flotation concentration mill at Renfrew which was placed in operation during the latter part of the year. Custom ores from Quebec, Ontario, and British Columbia were treated as well as ores mined by the Company. The concentrates produced were shipped to the Company's Refinery at Orillia, Ontario. Custom ores were purchased on the basis of the following prices:—

Schedule of prices per unit (20 lbs.) of molybdenite in ore delivered at concentrator, Renfrew.

Ores carrying between 2% and 3% MoS₂ — \$13.00 per unit.

80% concentrates \$1.00 per lb. of MoS₂.

Penalties imposed for copper and bismuth.

No settlement made for any molybdic oxide in ores.

Settlement 10 days after sampling.

Samples of ores to be submitted before any shipment made.

Ferro-Molybdenum, Etc.

The production of ferro-molybdenum in electric furnaces was begun in October of 1916 at Orillia by the International Molybdenum Company. This firm has also undertaken the production of molybdic acid and ammonia molybdate. Ferro-molybdenum is also being made in electric furnaces at Belleville, Ont., by the Tivani Electric Steel Co.

NICKEL.

The industry based on the mining and metallurgical treatment of the nickel-copper ores of the Subdury district, Ontario, ranks among the most important of Canada. Not only is there a considerable production of copper, but the nickel, which is the important product, supplies a very large proportion of the world's consumption of the metal.

The past few years development has very largely increased the known ore reserves of the district. These nickel-copper deposits have been the subject of special reports by the Mines Branch and Geological Survey at Ottawa, by the Ontario Bureau of Mines, Toronto, and just recently by the Royal Ontario Nickel Commission.¹

The production of nickel in 1916 amounted to 82,958,564 pounds, valued at \$29,035,497, as compared with 68,308,657 pounds, valued at \$20,492,597 in 1915, an increase of 21.4 per cent over that of 1915, and of 82.2 per cent over the production of 1914.

There were mined in 1916, 1,566,333 tons of ore, and smelted 1,521,689 tons, from which were produced 80,011 tons of Bessemer matte, carrying approximately 41,298 tons of nickel, and 22,430 tons of copper. The net value of the matte, as reported by operators was \$12,116,333, which is based on an average value of $7 \cdot 2$ cents per pound for the copper, and $10 \cdot 8$ cents per pound for the nickel. The average metal recovery in matte from the ores treated was $1 \cdot 474$ per cent copper and $2 \cdot 714$ per cent nickel, as against $1 \cdot 541$ per cent copper, and $2 \cdot 675$ per cent nickel in 1915.

The nickel-copper ore is reduced in smelters and converters to a Bessemer matte, containing from 77 to 82 per cent of the combined metals; in 1916 it averaged 51.6 per cent nickel and 28.0 per cent copper, as against 50.3 per cent nickel and 29.0 per cent copper in 1915; 49.0 and 31.1 respectively in 1914; and 52.7 and 27.4 respectively in 1913.

For the production of monel metal, a special matte is produced with contents of about 22 per cent copper, and 58 per cent nickel, which is included in the total given above. Monel metal is produced directly from this matte without the intermediate refining of either the nickel or the copper.

⁽a) Calculated from shipments made by rail.

Refined metallic nickel is now being recovered in Canadian refineries but only in small quantities and as a by-product in the smelting and refining of the silver-cobalt-nickel ores, nickel-oxide having been recovered in these smelters for several years. The recovery of nickel-sulphate was also reported for the first time in 1915. A considerable amount of nickel is probably contained in ores exported for smelting, for which no payment is received by the mines shipping and the amount finally recovered is impossible to ascertain.

The production of metallic nickel during 1916 was reported as 79,360 pounds, valued by the operators at \$31,538, as against 55,325 pounds, valued at \$22,130 in 1915; that of nickel-oxide and nickel-sulphate was reported as 555,868 pounds valued at \$101,358, as against 282,025 pounds valued at \$31,262 in 1915.

The total estimated nickel content of recoveries from silver-cobalt-nickel ores was in 1916, 361,702 pounds, as against 231,634 pounds in 1915.¹

The companies engaged in mining and smelting nickel ores are:—

The Canadian Copper Company, subsidiary to the International Nickel Company, with smelter at Copper Cliff, Ontario, and refinery at Bayonne, New Jersey. This company is erecting a new refining

¹ See chapter on "Cobalt."

plant at Port Colborne, Ontario, which will probably be in operation late in 1917.

The Mond Nickel Company of London, England, with smelter at Coniston, Ontario, and refinery at Clydach, Swansea, Wales.

The British American Nickel Corporation, Ltd., which started erecting a smelter and refinery at the Murray mine, late in 1916, although not shipping during the year, development was actively carried on.

The Alexo Mining Company, Ltd., which operated its mine at Porquis Junction on the Porcupine Branch of the Timiskaming and Northern Ontario Railway, shipping nickel-copper ore to the Mond smelter at Coniston.

Nickel was recovered as a by-product in the smelters at Deloro, Thorold, and Welland, from the silver-cobalt-nickel ores of the Cobalt district.

Prices.—The price of refined nickel in New York according to quotations published by the Engineering and Mining Journal remained throughout the year at from 45 to 50 cents per pound for ordinary forms with 5 cents more per pound asked for electrolytic nickel.

The price during 1915 remained fairly constant between 40 and 45 cents during the first seven months, and ranging between 45 and 50 cents for the last five months for ordinary forms. Electrolytic nickel was five cents higher per pound.

The price of nickel in Europe in 1916, as given by the "London Mining Journal," was quoted throughout the year at £225, or 48.9 cents per pound while as in 1915 it was quoted between £186 and £206 (40.4 to 44.7 cents per pound) from January 1st, until the end of May, when it rose to £210, and gradually increased until it reached in the last week in July a quotation of £225 per long ton (48.8 cents per pound) and remained at that price until the close of the year.

Exports and Imports.—The exports in 1916 amounted to 80,441,700 pounds, of which 11,136,900 pounds or 13.8 per cent went to Great Britain, and 69,304,800 pounds, or 86.2 per cent to the United States. In 1915, 20.7 per cent of the total went to Great Britain, and 79.3 per cent to the United States; and in 1914, 22.1 per cent went to Great Britain, and 77.4 per cent to the United States.

The exports to the United States, which had fallen off nearly 20 per cent in 1914 showed an increase in 1915 of over 46 per cent, and in 1916 of over 31 per cent.

The imports of nickel are classed with those of nickel-silver and German-silver and manufactures of these metals. There is also a considerable import of nickel-plated ware. The imports in 1916 consisted of nickel in ingots, bars, sheets, etc., to the amount of 892,439 pounds, valued at \$325,326, and manufactures of nickel, valued at \$89,084.

In view of the large export of nickel from Canada to the United States, and its refinement in that country, a record of the imports into, and exports of nickel from the United States, may be of special interest and is shown below as compiled from the "Foreign Commerce of the United States."

The values of the United States exports ranged from 37 to 46 cents per pound, with an average of 38.5 cents in 1916, as against 34 to 43 cents per pound with an average of 38 cents per pound in 1915, and 32 to 39 cents per pound with an average of 34 cents per pound in 1914.

Bounty on Refined Nickel and Nickel-oxide.—Under the terms of "The Metal Refining Act, 1907." of the Province of Ontario (7 Edward VII, Chap XIV) a bounty is authorized to be paid on nickel, cobalt, copper, and arsenic under certain conditions and restrictions during a period of five years following the passing of the Act (April, 1907). In March, 1912, the Act was amended to cover a further period of five years.

The sections affecting nickel are as follows:—

The Treasurer of the Province may under the authority of such regulations as may from time to time be made in that behalf by the Lieutenant Governor in Council pay in each year to the refiners of the metals or metal compounds hereinafter specified when refined in the Province from ores raised and mined in the Province, a bounty on each pound of such metal or compound so refined, as follows:—

Class 1. On refined metallic nickel or on refined oxide of nickel, 6 cents per pound on the free metallic nickel or on the nickel contained in the nickel-oxide, but nickel on which a bounty has already been paid in one form of product shall not be entitled to any further bounty in any other form, and the amount to be paid as bounty on the nickel products therein mentioned is not to exceed in all \$60,000 in any one year,

PLATINUM AND PALLADIUM.

In past years, the chief source of the platinum production of Canada was the placer gravels of British Columbia, principally in the Similkameen district.

During 1916, the reported recovery was only 15 crude ounces, valued at \$600, as against 23 crude ounces, valued at \$1,063 in 1915. It is possible that the production of platinum is considerably greater than actually reported. A perusal of the imports from Canada to the United States, as given by the United States Department of Commerce, and the exports from Canada into the United States, as given by the Canadian Department of Customs, shows that much larger quantities are leaving Canada. There is a possibility, of course, that the Canadian export record may include old and scrap platinum.

The exports from Canada into the United States were, in 1916, 532 ounces, valued at \$41,945, against 236 ounces, valued at \$11,052 in 1915.

The nickel-copper ores of the Sudbury district also carry small quantities of the metals of the platinum group, and from 1902 to 1912, considerable quantities of these metals were recovered from the residues resulting from the treatment of the mattes from Sudbury. In view, however, of the fact that other material has been treated in the works of the International

Nickel Company in addition to the nickel-copper mattes from Copper Cliff, Ontario, it is impossible to state what proportion of the above recoveries was from Canadian sources, although it is, of course, safe to assume that part of these metals has been derived from the Sudbury district mattes. The Company reported there has been no production in 1913, 1914, 1915, or 1916 from Canadian ores.

The recovery of gold, silver, platinum, and palladium at the works of the International Nickel Company in New Jersey for the six years ending December 31, 1912, was as follows:—

Recovery at the International Nickel Co.'s Works-New Jersey.

During 1915, the average monthly price of refined platinum in New York, fell from \$41.10 per ounce in January to \$38.00 in June and July, but increased rapidly during the last five months of the year to an average of \$85.50 in December. The price remained firm throughout 1916, reaching a maximum of \$101.25 for November, and an average for 1916 of \$83.40.

SILVER.

The total production of silver in 1916, amounted to 25,459,741 fine ounces, valued at \$16,717,121, and included: (a) refined silver, or silver contained in silver or gold bullion, 20,465,384 ounces, or $80 \cdot 3$ per cent; (b) silver contained in blister copper and copper matte, 779,916 ounces, or $3 \cdot 1$ per cent; and (c) silver estimated as recoverable from ores exported 4,214,441 ounces, or $16 \cdot 6$ per cent.

In 1915, the total production was 26,625,960 fine ounces, valued at \$13,228,842, and included: (a) refined silver, 81 per cent; (b) silver in blister copper and copper matte produced $2 \cdot 6$ per cent; and (c) silver estimated as recoverable from ores exported $16 \cdot 4$ per cent.

For the last few years, the production has shown a falling off both in quantity and value, while in 1916, the production decreased 4.4 per cent, and the value increased 26.3 per cent.

From 1887 to 1893, the production ranged in value between \$300,000 and \$400,000, and was derived chiefly from Ontario and Quebec. The next three years saw a rapid increase in production, due to the development of the silver-lead deposits of British Columbia, and in 1896 a production of over \$2,000,000 is recorded. From that year until 1905, the production varied between \$2,000,000 and \$3,500,000 rising rapidly during the next six years to \$17,580,455 in 1910, as a result of the discovery of the rich ores of the Cobalt district. Since then, there has been a falling off in quantity, but owing to the higher price of the metal, the total value was higher in 1912, 1913, and 1916.

Ontario produced in 1905, 40.9 per cent of the output of Canada, in 1911 its percentage was 93.8; in 1914 it had fallen to 88.4 per cent, and in

1915 it decreased again to 85.4 per cent, while in 1916 it amounted to 84.9 per cent of the total.

Quebec and the Yukon, have produced but a small proportion of the total, being in 1915, 0·3 per cent for Quebec, and 0·9 per cent for the Yukon; while in 1916, Quebec produced 0·4 per cent and the Yukon, 1·4 per cent.

The production of British Columbia, which has varied between two and five million ounces for the last twenty years, was in 1914, 11·1 per cent of the total production of Canada; in 1915 it increased to 13·4 per cent, and in 1916 it was 13·3 per cent of the total.

Prices.—The average price of silver in New York for the year 1916 was 65.661 cents per ounce, as against 49.684 cents in 1915.

The price, which was $56\frac{1}{2}$ cents during the first week of January, gradually increased, reaching a maximum of $77\frac{1}{4}$ cents early in May; it then receded gradually to $61\frac{7}{8}$ cents towards the middle of July, to again increase to $76\frac{5}{8}$ cents in the last week of the year.

In London, the average price for the year was $31 \cdot 315$ pence per standard ounce (925 parts fine), as against $23 \cdot 675$ pence in 1915. The minimum prices were $26\frac{7}{8}$ pence early in January, and $29\frac{1}{2}$ pence in the middle of July; while the maximum prices were $37\frac{1}{2}$ pence early in May, and $36\frac{13}{16}$ pence at the end of December.

The high silver prices in 1916 were due to the augmented demand from the Mints of the Entente Powers, a diminished supply, and also increased consumption in India, and the United States.

⁽a) 925 parts fine. From "Engineering and Mining Journal," Jan. 6, 1917.

Important quantities of silver are being produced in Canada, both as fine metal and as silver bullion, ranging in fineness from 850 to 998.2. Fine silver is produced at Trail, B.C., by the Consolidated Mining and Smelting Company of Canada, Limited, being derived chiefly from the silver-lead ores of the Province, and finds a market in Canada, the United States, and China.

In Ontario, ores from the Cobalt district are treated by the Coniagas Reduction Co., Thorold, Ontario; the Deloro Smelting and Refining Co., Deloro, Ontario; the Metals Chemical Co., Welland, Ontario; and the Standard Smelting and Refining Co., Chippewa, Ontario.

Silver bullion varying from 850 to 998.2 is produced at these works, other products being white arsenic, metallic nickel and cobalt, sulphate of nickel and cobalt, nickel and cobalt-oxides, and mixed oxides. The silver bullion as a rule finds a market in the United States and in England.

Bullion shipped by these Ontario smelters in 1907 contained 4,449,722 fine ounces of silver; in 1908, 11,168,689 ounces; in 1911, 17,753,167 ounces;

in 1913, 11,356,707 ounces; in 1915, 9,885,989 fine ounces, and in 1916, 9,665,516 fine ounces.

The bullion shipped from the mines and mills in the Cobalt district in 1916, is reported as 8,551,070 fine ounces, as against 9,204,893 fine ounces in 1915, and 10,335,527 in 1914.

United States smelters report the receipt in 1916 of 7,072 tons of ore from Cobalt district, containing 3,238,795 fine ounces of silver, as against 7,310 tons, containing 3,580,843 fine ounces in 1915.

Exports and Imports.—The exports of silver as metallic or contained in ores, concentrates, etc., during 1916 were 25,279,359 fine ounces valued at \$15,637,885, as against 27,672,481 fine ounces, valued at \$13,812,038 in 1915.

The imports of silver bullion into Canada in 1916 were valued at \$875,157, as against imports to the value of \$337,254 in 1915.

Quebec.

The small quantity of silver credited to Quebec province for a number of years represents a small silver content of the pyritic ores mined at Eustis and Weedon, in the Eastern Townships, and the lead-zinc ores of Notre-Dame des Anges, Portneuf county. The production in 1916 was 98,610 fine ounces, valued at \$64,748, as against 63,450 fine ounces, valued at \$31,524 in 1915.

Ontario.

The production of silver in Ontario increased from 17,777 fine ounces in 1903 to 2,451,356 fine ounces in 1905, and reached a maximum of 30,540,754 fine ounces in 1911. The maximum value, \$17,772,352, was reached in 1912.

In 1916 the production was 21,608,158 fine ounces, valued at \$14,-188,133, as against 22,748,609 fine ounces, valued at \$11,302,419 in 1915, a decrease of 5.0 per cent in quantity, but an increase of 15.5 per cent in value. The production included in addition to the production of the Cobalt and adjacent silver camps, 86,974 ounces contained in gold bullion, as

against 74,784 ounces in 1915.

The silver ores of the Cobalt district, which in the early days of the camp were all exported for treatment, are being reduced to an increasing extent each year within the camp by a combination of amalgamation cyanide process, with recovery of silver bullion. During 1916, 8,551,070 ounces, or 39.5 per cent of the output was thus recovered as bullion in the district, while 9,665,516 ounces, or 44.7 per cent of the total was recovered by the silver smelters of the Province, so that over 18 millions or 84.2 per cent of the Ontario production was recovered in the form of bullion within the Province, leaving a balance of 15.8 per cent treated in the United States. In 1915 about 41 per cent was recovered as bullion in the district and 43 per cent by the silver smelters, giving a total of 84 per cent as recovered in the form of bullion within the Province, while in 1914, the recovery in the district was 41 per cent, and that by the silver smelters 36 per cent, or a total of 77 per cent as recovered within the Province.

The following notes are taken from the respective company's reports:-

Canadian Mining Corporation, Ltd.

Record of production for 12 months ending December 31, 1916:-

average silver production per ton or ore, in ources	

The proportion of silver produced from high grade and other shipping ore, as compared with the total silver produced, was 32.85% in 1916, as against 35.90% in 1915.

The total production from the Company's mines since the commencement of operations up to December 31, 1916, was 23,129,040 ounces.

The total cost per ton of ore treated was \$13.43 in 1916, as against \$10.15 in 1915, and \$9.16 for the nine months in 1914; and the cost per ounce of silver was 34.46 cents as against 29.57 cents in 1915, and 30.91 cents in 1914.

The ore reserves estimated at December 31, 1916, are reported as 67,752 tons, containing 3,235,000 ounces of silver.

of silver.

Nipissing Mines Company.

Year ending December 31, 1916:—(Nipissing production only).

Total	tonnage of ore produced (high grade 1,269 tons)	78,120
39	silver produced, in ounces	4 044 668 49
22	silver produced, in ounces	63 027 668 83
32	gross ounces of silver produced.	\$26 180 028 71
11	" value	24 946 067 00
	", value Net "	\$24,840,907.90

"The high grade mill ran at full capacity throughout the year, and treated 1,064 tons of Nipissing ore and metallics, assaying 1,800 ounces per ton and 598 tons of custom ore and metallics, with an average assay of 3,113 ounces per ton.

"The precipitate from the low grade mill, containing over two million ounces was

also refined at the high grade plant.

"Shipments of bullion amounted to 192 tons, averaging 998 fine, and contained 5,578,162 fine ounces.

"The treatment cost was higher on account of the largely increased cost of mercury and cyanide, due to the war. The same cause, however, produced an active demand for cobalt, so that we were enabled to sell our entire stock of cobalt residue and to contract for the whole of our 1917 output.

"Shipments of residue in 1916 amounted to 2,506 tons, compared with 326 tons in 1915.

"The low grade mill treated 76,851 tons of Nipissing ore, averaging 29.61 ounces per ton, and 106 tons of by-products, assaying 1,732.38 ounces with a recovery of 2,133,681 ounces in the cyanide plant, or an extraction of 86.76 per cent.

"The above recovery does not include the silver saved by flotation of the cyanide

tailing.

"Forty stamps ran 286.71 days or 78.33% of possible running time, crushing 268.04

tons per day, and 6.70 tons per stamp per day.

"The ore coming from the lower levels of the mine is more difficult to treat and consumes more cyanide. This, together with rapid rise in prices of all chemicals and supplies, and the advance in wages, brought the mill costs up to \$4.60 per ton, compared with \$3.91 in 1915; of this increase \$0.34 is due to cyanide and \$0.15 to wages.

"The high cost of aluminum dust necessitated the adoption of some other method of precipitation, and after exhaustive experiments precipitation by sodium sulphide was substituted. A solution of caustic soda is added to the precipitate, which is then desulphurized by circulating it through a small tube mill filled with aluminium ingots. The precipitate is then melted down to fine silver. The new practice is very satisfactory, and is cheaper even should the prices of all supplies drop to the pre-war basis.

"Experiments with the flotation of the tailing from the cyanide plant have been carried on throughout the year; the results are not yet satisfactory. The extraction is low, notwithstanding many variations in the method of applying the flotation treatment. By supplementing the treatment with concentration, either before or after flotation, much better results can probably be obtained and experiments are now being conducted along

this line."

Coniagas Mines, Ltd.

Year ending October 31, 1916:-

Tons of ore treated, high grade concentrates shipped.	56,973 492 2,276.6
Average silver content, in ounces	450.4
Tons of low grade slime	329.8
Average silver content, in ounces	193 · 2
Tons of mine ore shipped	
Average silver content, in ounces	2,710·3 3·5
Tons of precipitate shipped	
Average silver content, in ounces	20,494.6
Per cent of possible running time.	99.83

"Mill heads averaged 25.76 ounces per ton as compared with 23 ounces for 1915. The sand tailings from the mill averaged 3.33 ounces per ton, and the slime tailings 4.90 ounces per ton, or an average for general tailings of 3.99 ounces.

"A recovery of 131·3 tons of slime concentrates containing 26,986 ounces of silver was made in the canvas plant which was erected to re-treat the slime tailings. Forty-four tons containing 8,968 ounces were shipped to the Coniagas Reduction Company, and 87·3 tons containing 18,018 ounces were treated in the cyanide mill.

"Cyanidation of canvas table concentrates and of the primary slime from the mine was begun February 26, 1916, and was continued during the remainder of the year. During this period 87·3 tons, dry weight, of canvas table concentrates, averaging 206·40 ounces per ton, and 889·3 tons, dry weight, of mine slime averaging 81·62 ounces per ton were treated, or a total of 976·6 tons, dry weight, containing 81,916 ounces of silver, of which 71,731·24 ounces of silver were recovered.

"The ore has been mined and concentrated during the past year at the net cost of 15·24 cents per ounce as compared with 13·618 cents per ounce for the previous year. This cost includes all overhead expenses, royalties, and all other expenses, exclusive of shipping, smelting, refining, and marketing charges which amounted to 4·27 cents per ounce of silver as compared with 3·252 cents for the previous year. It also includes the cost of development of the Agaunico property amounting to about 1 cent per ounce, but excludes an undetermined War Tax."

Buffalo Mines, Ltd.

Year ending April 30, 1917:—

Tonnage of ore treated by combination concentration and oil flotation methods. Tonnage of sand tailings treated by flotation process. Recovery from combination concentration and oil flotation, in ounces. Tonnage of slime from concentrator cyanided.	14,452 35,507 324,636 3,038
Recovery from slimes, in ounces. " shipments of concentrates, residues, etc., in ounces. " bullion shipments, in ounces. Total " production of illustiments, in ounces.	37,089 205,194 36,715
Total production of silver for year	394,587

"The ore reserves amount to 40,900 tons with a total content of 1,071,125 ounces.

"The sand tailings approximate 275,000 with an estimated content of 1,400,000 ounces,

and there also 3,000 tons of residues at the high grade plant.

"The reconstruction of plant is still under way and refining plant is not yet completed for the final treatment of flotation concentrates. This has been considerably delayed, due to our inability to get the equipment required and delay in making the installation, but it is probable the refining plant will again be in operation, treating both high grade and low grade ore by the new process in the latter part of June.

"This should materially decrease the cost of treatment both for high grade ore and flotation concentrates, and is a possible solution of the residue pile with its additional values in cobalt and nickel. The completion of the present process should for the present end the matter of reconstruction and allow us to get down to systematic work again."

Kerr Lake Mining Company.

Year ending August 31, 1916:—

Tonnage or ore treated (10,354 tons from dump)	36,129
Average grade ore treated in ounces	27 55
riigh glade die shipped, in tons	402
2 Todaction from simpping ore, in ounces	1.438.600.80
Total gross production, in ounces	995,192.27

The cost of mining was \$3.68 per ton, and 8.89 cents per ounce. The ore reserves are estimated at 3,827,000 ounces.

British Columbia.

The silver production of British Columbia based on smelter recoveries in 1916 was 3,392,872 fine ounces, valued at \$2,227,794, as against 3,565,852 fine ounces, valued at \$1,771,658 in 1915, a decrease of $4\cdot8$ per cent in quantity, but an increase of $25\cdot7$ per cent in value.

The chief sources of the silver production in this Province are the silver-lead ores of the East and West Kootenays, supplemented by the silver contained in the gold-copper ores of Rossland, the Boundary, and Coast districts.

The leading silver producers, in order of importance were:-

Silver-Lead Mines.—Sullivan, Standard, Utica, Rambler, Cariboo, Galena Farm, Surprise, Ruth-Hope, Slocan Star, Silver Standard, and Blue Bell.

Copper-Gold Mines.—Hidden Creek, Granby, Centre Star, Le Roi, Britannia, Le Roi No. 2, Mother Lode, Rocher Deboule, and Marble Bay.

Gold-Silver Mines.—Union, Horn-Silver, Nickel Plate, and Jewel.

Production of Silver in British Columbia by Districts, 1912-1916.

^{*}From the Minister of Mines Reports, British Columbia.

Yukon.

The silver production of the Yukon in 1916 amounted to 360,101 fine ounces, valued at \$236,466, as against 248,049 ounces valued at \$132,241 in 1915, and 92,973 ounces, valued at \$50,959 in 1914.

The comparatively large increase in the production for the past two years is due to the shipments of high grade silver-lead ores from the Silver-King property in the Mayo area, north of the Stewart river.

Thus lode mining, including recovery from the gold, copper and silverlead ores, produced in 1916,13 per cent of the total output, leaving 87 per cent as the production from the alluvial workings.

On an average about one ounce of silver is contained in each five ounces of crude bullion from the alluvial workings.

TIN.

Tin ores have not yet been found in sufficient quantities in Canada to be of economic importance.

The occurrence of tin ore has been reported from several localities, the most important, perhaps, being the discovery of cassiterite, near New Ross, Lunenburg county, Nova Scotia. Reports upon it may be found in the Summary Report of the Geological Survey Branch of the Department of Mines, for 1907, 1908, 1910, 1911, and 1912.

Tin has also been found in black sands in the Atlin district of British Columbia.

The imports of 1916 were valued at \$2,999,675, and included: tin in blocks, pigs, and bars, 3,457,500 pounds, valued at \$1,372,200; tin foil, bichloride of tin and strip waste, \$1,544,420; and tin ware and crystals, valued at \$1,311,482. There is also a large annual import of tin plate, the quantity in 1916 being 115,084,900 pounds, valued at \$5,221,163.

TUNGSTEN.

No production of tungsten is reported during 1916.

Scheelite was discovered in Halifax county, Nova Scotia, in 1908. Mr. Faribault, of the Geological Survey, visited this deposit again in 1909, and a preliminary report thereon will be found in the Summary Report of the Geological Survey for 1909, pages 228 to 234. During 1910 and 1912 these deposits were developed by the Scheelite Mines, Limited, who constructed a mill and made a shipment of 14 tons of tungsten concentrates—the first shipment from Nova Scotia—carrying 72 per cent tungstic acid.

The occurrence of wolframite has also been noted in association with molybdenite, by Dr. Walker, in New Brunswick, near the confluence of Burnt Hill brook and southwest Miramichi river. The property was tested by Mr. Freeze, of Doaktown, New Brunswick, and Mr. Matthew Lodge, of Moncton, who formed the Acadia Tungsten Mines Company. This Company has done a little development and had under construction a 30-ton concentrator, during 1916.

The tungsten ore deposits of Nova Scotia and New Brunswick were reported on by Mr. Charles Camsell and Dr. D. D. Cairnes, in the Summary Report of the Geological Survey Branch for 1916.

During September 1916, Dr. D. D. Cairnes investigated the possibility of important deposits of scheelite on Dublin gulch, Mayo district, Yukon territory, and reports rather favourably on these deposits, stating that the ore is found as alluvial with the gold placer and in lodes associated with small, barren, ramifying quartz veinlets which occur very plentifully intersecting pegmatitic zones within the granite. The scheelite, where found, occurs in the form of crystals along the edges of and between the veinlets.

He states that between $1\frac{1}{2}$ and 2 tons of scheelite concentrates should be freighted to Mayo during the winter and be available early in the summer of 1917. He looked to a recovery for the season of 1917 of from 10 to 20 tons of concentrates in addition to the gold.¹

Prices.—The most spectacular advance in the price of metal known in recent years was in tungsten, both metal and ore.

During the first quarter of 1915, the New York market was very poor, ranging from \$6.00 to \$9.00 per unit. Following enormous orders for war requirements, in April and May, 1915, the price reached \$10.00 per unit and continued rising by leaps and bounds. Large quantities of tungsten ore were booked in December at \$44.00 per unit and also at \$50.00 per unit. Ammunition buyers have paid as much as \$62.50 per unit or even more.

¹ Summary Report of the Geol. Survey for 1916, pp. 12-19.

Early in 1916 the demand for tungsten ore advanced the price rapidly to \$60.00 per unit by the end of January, and \$70.00 in the latter part of February. Spot tungsten in March realized \$85.00 per unit, in New York, and even a higher figure was paid in the West for immediate delivery. And towards the middle of April sales at round \$100.00 per unit were reported, but at the close of the month the quotations for tungsten ore experienced a heavy break caused mostly by the great increase in production which soon satisfied consumers as to their requirements. By the middle of May prices had dropped, and ranged from \$40.00 to \$45.00 per unit. By the middle of August, the price had gone to \$20.00.

Orders from the allied countries found sellers willing to accept \$15.00 early in September. The market strengthened, and \$18.00 and \$20.00 were paid for prompt delivery towards the close of 1916.

"The average price obtained in the United States the first six months of 1916 was \$2,700 per ton; the average price in 1915 was \$970; in 1914 it was \$400; in 1913, \$438; and in 1912, \$377 per ton. Early in 1917 the price ranged from \$1,800 to \$2,000 per ton."

The official prices in London for tungsten powder were 6s 3d (\$1.52) per pound for the whole year, with the exception of the period from May 26th. until September 22nd., when it was fixed at 5s 10d (\$1.42) per pound. The price for ferro-tungsten varied between 6s 1d (\$1.48) and 5s 6d (\$1.34) per pound.

¹ From quotations by the Engineering and Mining Journal.

[†] From the Denver Mining and Financial Record.

ZINC.

With the exception of a small production in experimental work, there was no recovery of zinc spelter, or refined zinc in Canada previous to 1916. Hitherto the production of zinc has been recorded in terms of the tonnage of ore shipped and metal contents thereof. The establishment of an electrolytic refinery at Trail has placed the metallurgy of this metal in Canada on a similar basis to that of lead and copper, and it will be in order to record the production accordingly.

In 1915 the shipments of zinc ores to the United States smelters for reduction were 14,895 tons valued at \$554,938, and containing 12,231,439 pounds of zinc. Assuming a probable recovery of 80% of the metal, the production of zinc may be recorded as 9,785,151 pounds which, at the average price of zinc for the year, 13·230 cents per pound in New York, would be worth \$1,294,575.

In 1916 the total zinc ore shipments from mines, including the zinclead ores from the Sullivan mine, and ores exported were about 82,077 tons, containing 48,498,078 pounds of zinc (partially estimated in the absence of complete returns). A portion of the ores shipped to Trail were not treated during the year and the percentage of zinc recovered at the Trail refinery in the early stages of operation was probably not as large as will be secured when the primary difficulties have been eliminated. Adding to the actual recovery of refined zinc at Trail the zinc contents of ores sent to the United States smelters after allowing for smelter losses, we have a zinc production of 23,364,760 pounds which, at the average price of zinc for the year, 12.804 cents, would be worth \$2,991,623. Of the total production thus recorded 1,663,200 pounds is credited to the Notre-Dame des Anges ores in Quebec, and 21,701,560 pounds to British Columbia.

The greater part of this production is from British Columbia, and the ore shipped contains also a varying silver content, for which payment is made by the smelters, and without which, on account of the import duty to the United States and the long rail haul, it would not, in many cases, pay to ship. The Slocan mining division produced about $\frac{1}{3}$ of the total output, the Fort Steele division, about $\frac{1}{2}$, and the balance came mostly from the Ainsworth and Nelson divisions.

In Quebec, the property at Notre-Dame des Anges, Portneuf, which is being operated by the Weedon Mining Company, shipped several hundred tons of ore, and a small production was made by Mr. P. Tetreault.

The output from Quebec was about 5 per cent of the total production from Canada.

*Figures not available.
(a) Includes 7,424 tons shipped late in 1908.

The zinc industry has been the subject of a special report in 1905 by a Commission appointed to investigate the zinc resources of British Columbia, and the conditions affecting their exploitation.

In 1916 a brief report was made by Dr. A. W. G. Wilson on the production of spelter in Canada, and conditions in connexion with the home treatment of British Columbia zinc ore.¹

During 213 the new United States customs tariff came into effect considerably 2 ducing the duties payable on Canadian ores, the new items affecting Canadian shipments being:—

Zinc ores containing 25 per cent or more zinc: 10% on zinc contained therein. Lead bearing ore: $\frac{3}{4}$ cent per pound on lead contained therein.

Although not paid for by the United States smelters, the lead in ore is considered as dutiable and as there is often a small lead content in the zinc ore or cencentrates shipped, the lead duty applies. The result of the decreased duties has been a considerable increase in zinc shipments.

There is also a duty of 15 per cent on metallic zinc exported to the United States, and at present an import of $7\frac{1}{2}$ per cent on zinc and other materials imported into Canada from the United States.

Prices.—The price of spelter in New York, which was 16 cents early in January rose sharply to $18\frac{1}{4}$ cents towards the end of the month, to decrease gradually to a minimum of $8\frac{1}{4}$ cents towards the end of August. Early in September a large business was done and the price gradually strengthened to 13 cents in November, but in December the market was weak, and the year finished with spelter quoted at $9\frac{1}{2}$ cents.

Imports.—The recorded imports of zinc, which have hitherto been taken as an index of consumption, show a fairly steady increase, and amounted in 1916 to 29,999,838 pounds, valued at \$3,642,476, with also manufactures of zinc valued at \$48,101.

The imports of brass, which alloy contains about 30 per cent zinc, were valued in 1916, at \$3,752,851.

The imports of zinc during 1915 were 28,170,757 pounds, valued at \$2,753,647, with also manufactures of zinc valued at \$21,711.

The imports of brass were valued at \$2,463,532.

The detailed imports for the last three years are given in the following table, with also the estimated zinc contents of zinc products and brass.

Summary of Imports of Zinc and Zinc Products in 1914, 1915, and 1916.

		1914.			1915.			1916.

Consumption.—The table of imports shows that in 1916, 13,460 tons of zinc were imported as zinc or zinc products, with also 446 tons of zinc in brass, and approximately 1,000 tons as zinc contents of manufactures of zinc and brass, or a total of 14,906 tons, which added to the zinc refined in Canada, would give a total consumption of about 18,000 tons, as against 14,000 in 1915.

It is probable, however, in the case of zinc, as has been already shown for steel, copper and lead, that there have been other imports besides those recorded under the usual classification, and that the actual consumption in 1916 was greater than the above estimate.

There are now in Canada three companies constructing, or operating electrolytic plants, viz: The Electro Zinc Company, formerly at Welland, Ontario, and now at Shawinigan Falls, Que, which uses the Watt's process; the French Complex Ore Reduction Company at Nelson, B.C., using the French process; and the Consolidated Mining and Smelting Co. of Canada, Ltd., at Trail, B.C., which company has erected a large plant and is increasing its capacity so as to treat, it is reported, about 70 tons per day.

In 1916, the operations with the exception of the Trail plant were still in the experimental stages of development.

The plant of the Electro Zinc Co. was designed to recover refined zinc ores from Notre-Dame des Anges, Quebec.

The French Complex Ore Reduction Co. established a plant at Nelson, after the Provincial Government had guaranteed its bonds to the amount of \$40,000, and was reported to be in a position to start operations early in 1917.

The Trail plant of the Consolidated Mining and Smelting Co. started regular commercial operations early in 1916, and in July it was reported to be producing 20 tons per day. Later in the year, the company undertook to increase its capacity to 45 tons, and then to 70 tons.

Early in 1917 it was reported to be producing about 45 tons per day.

Bounties.—An Act to provide for the payment of bounties on zinc produced from zinc ores mined in Canada was passed by the House of Commons of Canada, May 3, 1916, and reads as follows:—

"An Act to provide for the payment of Bounties on Zinc produced from Zinc Ores mined in Canada. His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

- "1. This Act may be cited as The Zinc Bounties Act, 1916.
- "2. Whenever it appears to the satisfaction of the Minister of Trade and Commerce who is charged with the administration of this Act, that the standard price of zinc or spelter in cakes, stocks or pigs, in London, England, is less than £36 19s 3d sterling, per ton of two thousand two hundred and forty pounds, the Governor in Council may authorize the payment out of the Consolidated Revenue Fund of a bounty on zinc or spelter, containing not more than two per cent of impurities, produced in Canada, at the time the price is as hereinbefore stated, from zinc ores mined in Canada. Such bounty shall be equal to the difference between such standard price per ton, and £36 19s 3d per ton, but shall in no case exceed two cents per

pound, and in no event shall any bounty be paid when the price received for such zinc and spelter by the producer is eight cents or more per pound.

- "3. No bounty shall be payable under this Act on zinc or spelter produced during the continuation of the war, and in no event shall bounty be payable on zinc or spelter produced after the thirty-first day of July, one thousand nine hundred and seventeen.
- "4. The total amount payable under the provisions of this Act shall not exceed the sum of \$400,000.
- "5. The Governor in Council may make regulations for carrying out the provisions of this Act."

NON-METALLIC PRODUCTS.1

ABRASIVES.

The abrasives produced in Canada are: corundum, the various sandstone abrasives, as grindstones, pulpstones, scythestones, etc., and tripolite, or infusorial earth.

Corundum.

The 1916 sales of grain corundum were the lowest since 1901 amounting to only 134,811 pounds, valued at \$10,307, or an average of 7.65 cents per pound, as against sales in 1915 of 523,305 pounds, valued at \$33,138, or an average of 6.33 cents per pound.

Grain corundum to the amount of 134,811 pounds was recovered from 1,864 tons of rock milled, a recovery of 3.6 per cent. The recovery in 1915 was 6.7 per cent, in 1914 was 5.7 per cent, in 1913, 6.2 per cent, and in 1912 it was 4.4 per cent. The recovery of corundum during the earlier years of the industry was about 10 per cent, but during recent years a much lower grade of rock has been milled.

Statistics concerning the annual production are given in the following table:—

Production of Corundum Ore and Corundum.

(a) In addition to this amount which was milled in Canada, 267 tons of ore were mined and shipped to the United States for treatment there.

Corundum is found in an area embracing several townships in Renfrew and Hastings counties in the Province of Ontario. The industry made its appearance there in 1900, the production reaching a maximum in 1906. From 1907 to 1913 the yearly production was smaller, but fairly uniform.

¹ A recent publication of the Mines Branch of the Department of Mines (No. 305, Non-Metallic Minerals in Canadian Manufacturing, 1914, by H. Frechette) gives a collection of interesting data with regard to the non-metallic minerals used in Canadian manufacturing industries, indicating the sources of these non-metallic minerals, and the various uses to which they are put.

The Manufacturers Corundum Company has been the only operator for the last seven years.

Detailed information concerning the mines and mills of the corundum district will be found in the Annual Reports of the Ontario Bureau of Mines, and in the Geological Survey publications.¹ The treatment of the corundum-bearing rock consists of crushing, concentration, magnetic separation of the iron, air separation of the mica, and sizing.

The magnetic sand recovered as a by-product in the concentration has found a sale for use in the manufacture of school blackboards.

Grindstones, Pulpstones, Etc.

The total production of grindstones, pulpstones, and scythestones for 1916 was 3,478 tons, valued at \$52,782, as compared with a production in 1915 of 2,580 tons, valued at \$35,768, an increase of 35 per cent in quantity, and 48 per cent in total value.

The production, as usual, was confined to Nova Scotia and New Brunswick. Reports were made by four operating companies, the quarries reporting sales being located at Mic Mac Point and Quarry Island, Pictou county, N.S., at Stonehaven and Clifton, Gloucester county, at Quarry-ville, Northumberland county, and at Woodpoint, Westmoreland county, N.B.

The grindstones are shipped chiefly in the finished condition and are marketed in Canada, Newfoundland, and the United States, the price realized being around \$11 to \$16 per ton.

A number of pulpstones are usually made each year, though none were reported for 1916. Scythestones, both finished and in the rough, are also shipped as well as occasionally small quantities of grit for marble polishing.

The pulpstones have come from the Miramichi Quarry Company's property at Quarryville, Northumberland county, N.B., from which an excellent building stone is obtained. These quarries were idle during 1916.

^{1&}quot;The Geology of the Haliburton and Bancroft Area," Adams, Geol. Sur. Can., Memoir No. 6. "Corundum, its Occurrence, Distribution, Exploitation and Uses." Barlow, Geol. Surv. Can., Memoir No. 57.

The value of exports of grindstones finished and in the rough during the calendar year 1916, according to the records of the Department of Customs, was \$44,942 (finished, valued at \$43,178, and rough, at \$1,764), as compared with an export in 1915, valued at \$36,234 (finished, valued at \$35,334, and rough \$900).

The greater proportion of the Canadian production of grindstones is exported. To meet Canadian requirements, in Ontario and Quebec chiefly, there were imported during 1916: grindstones to the value of \$122,291; burrstones, 406 valued at \$648; emery \$50,666; manufactures of emery \$317,053; pumice stone \$34,554, sandpaper \$247,317, iron sand for glass or granite polishing, or for sawing stone \$15,641; or a total value, including grindstones, of \$788,150.

The imports during 1915 included: grindstones to the value of \$79,391, and other abrasives as follows: burrstones, 177, valued at \$314; emery, \$67,067; manufactures of emery \$139,665; pumice stone, \$18,814; sandpaper, \$133,677; iron sand for glass or granite polishing, or for sawing stone, \$3,263; or a total value, including grindstones, of \$442,191.

There was also imported in 1916 and not included in the totals above: artificial abrasives, valued at \$79,315, as compared with \$28,921 in 1915.

Tables, showing values of exports of grindstones and imports of abrasive materials into Canada, follow:-

⁽a) Emery in bulk, crushed or ground. Duty free.
(b) Emery and carborundum wheels and manufactures of emery or carborundum.
(c) Burrstones in blocks, rough or unmanufactured, not bound up or prepared by binding into millstones.
(d) Pumice and pumice stone, ground or unground. Duty free.
(e) Iron sand or globules for polishing glass or granite, or for sawing stone. Duty free.
(f) Sandpaper, glass, flint, and emery paper or emery cloth.

The following is a list of the operators of grindstone quarries:-

The Mic Mac Grindstone Co., Ltd., New Glasgow, N.S.

Jos. W. Sutherland, West Merigomish, N.S.

The Read Stone Company, Stonehaven, N.B. and Sackville, N.B.

J. L. C. Knowles, Clifton, N.B.

The Miramichi Quarry Co., Ltd., Quarryville, N.B.

Tripolite.

The shipments of tripolite in 1916 were reported as 620 tons, valued at \$12,139.

A brief review of the uses of tripolite, together with a list of the principal known Canadian occurrences, was published in the Annual Report on Mineral Production for 1914.

The shipments from year to year have varied very much, and in some seasons the producing companies shipped from stock only.

From 1902 to the present, Nova Scotia has been the only province producing tripolite, and three companies only have appeared on the list of shippers. These are the Premier Tripolite Company with deposits (unworked for several years) at St. Anns in Victoria county, Cape Breton Island; the Fossil Flour Company, formerly operating at Bass River lake, Colchester county, near Castlereagh; and the Oxford Tripoli Company, operating at Silica lake (formerly at Bass River lake), Colchester county, the latter Company having taken over the property of the Fossil Flour Company.

At the plant of the Oxford Tripoli Company, the crude product is dried and treated on the spot in a 10-ton mill. It is exported to the United States.

The following table gives statistics of the Canadian production from 1896 to date, all of which has been exported.

Occurrences in British Columbia.

Diatomaceous, or infusorial earth, has been found in British Columbia¹ apparently associated with volcanic ash. Such occurrences have been noted at a point 18 miles from Ashcroft and also from Deadman river north of Savona.

"The diatomaceous earth from the Kamloops district is admixed with rhyolitic dust and other detritus, chiefly clay, which lowers its silica content to 80 per cent. The purer varieties of the earth contain from 90 to 97 per cent silica. The British Columbia earth is a soft, white, chalklike substance of fine texture which frequently has been mistaken in the field for kaolin."

Drysdale—Geological Surv. Can. Sum. Report, 1916, p. 52, 53.

Volcanic ash, or andesitic pumice occurs in great quantity as the most recent formation in the Bridge River district and may become of economic importance.

Analyses both of the impure diatomaceous earth and of the volcanic ash are given herewith.

 Siliceous earth, from Neuberg, Germany, after some preparatory drying and crushing.

ACTINOLITE.

The production of actinolite in 1916 was reported as 250 tons, valued at \$2,750, after having been milled and prepared for market.

Production of actinolite in Canada has been confined to Elzevir and Kaladar townships in Hastings and Addington counties, Province of Ontario, the centre for the industry being the village of Actinolite. The earliest operations date back to about 1883. For a time deposits were worked only at intervals long apart when sufficient rock was broken to meet the demand for several subsequent years.

Actinolite is used as an ingredient for a coal-tar-roofing compound, the grinding of the crude material being done in such a way as not to destroy the fibre.

An interesting review of the industry appeared in the Ontario Bureau of Mines Report, Vol. XXII, Part II, p. 117, and was quoted in the report on the Mineral Production of Canada for 1913.

The only shipper in recent years is the Actinolite Mining Company of Bloomfield, New Jersey, U.S.A., which owns deposits of actinolite in Kaladar and Elzevir townships, and a mill for grinding the same at Actinolite, Ontario.

Statistics of production during recent years are given in the following table:—

Annual Production of Actinolite.

Calendar Year.	Tons.	Value.	Average Price.

ARSENIC.

The total production of white arsenic in 1916 was 2,186 tons, valued at \$262,349, as compared with 2,396 tons, in 1915, valued at \$147,830, and 1,737 tons in 1914, valued at \$104,015.

Canada's production of white arsenic up to 1903 was secured from a plant at Deloro, Ontario, which treated mispickel residues from which the gold content had been extracted by amalgamation, and bromo-cyanide treatment. Since 1903 though, even in spite of a bounty offered in 1907 by the Ontario Government on "white arsenic, otherwise known as arsenious oxide, produced from mispickel ores, and not from ores carrying smaltite, niccolite, or cobaltite," the industry has been dormant.

In 1906 plants treating cobalt ores made provision for the recovery of white arsenic as a by-product, and since then white arsenic has been produced each year, the production for the last five years being fairly constant in quantity. On this white arsenic no bounty is payable.

The plants which have been producing white arsenic from cobalt ores are located at Deloro, Thorold, Orillia, Copper Cliff, and Welland, all in the Province of Ontario. In 1916 only three of these were operating, viz.: the Deloro plant of the Deloro Mining and Reduction Company, the Thorold plant of the Coniagas Reduction Company, and the Welland plant of the Metals Chemical Co., Ltd.

Arsenical ore concentrates were shipped for several years by a gold mining company in Nova Scotia, but the last of these was made in 1910.

The exports of white arsenic in 1916 according to the records of the Department of Customs were 3,950,500 pounds (1,975 tons), valued at \$197,458, as compared with 4,636,400 pounds (2,318 tons), in 1915, valued at \$174,190.

The imports of white arsenic, or arsenious oxide, in 1916 were 41,090 pounds, valued at \$7,086, as compared with 14,222 pounds in 1915, valued at \$657.

Imports of sulphide of arsenic in 1916 were 239,991 pounds, valued at \$11,839, as compared with imports in 1915 of 171,993 pounds valued at \$5,415.

There was also imported during 1916, arseniate, bi-arseniate and stannate of soda to the amount of 15,779 pounds, valued at \$1,228, as compared with 9,090 pounds in 1915, valued at \$503.

ASBESTOS.

Asbestos production in Canada has for many years been confined to the Eastern Townships district of the Province of Quebec; Black Lake, Thetford, Robertsonville, Danville, and East Broughton being the shipping points. Other occurrences are known, but hitherto these have not proved of economic interest.

A serpentine area in the Porcupine gold district has been under development from which some trial shipments have recently been made.

The asbestos deposits, and the asbestos industry (up to 1910) have been described fully in a special report of the Mines Branch, and have also been the subject of a Geological Survey Memoir.

The production since 1910 as recorded by this Division, has been classified on the following valuation basis:—

Crude No. 1 Value \$200 per ton, and upwards.

Crude No. 2. Value under \$200 per ton.

Mill Stock No. 1. Value \$30 and upwards per ton.

Mill Stock No. 2. Value \$15-\$30 per ton.

Mill Stock No. 3. Value under \$15 per ton.

"Asbestic" also mentioned in the tables of statistics, is a fine asbestos powder which now enters largely into the construction and inside finish of fireproof buildings. It is manufactured from the sand and tailings from the shaking screens of some of the asbestos mills. For the year 1916, however, there has been such an increase in asbestos values that no attempt has been made to sub-divide the crude and mill fibre.

In 1916 the output of asbestos was 118,247 tons, as compared with 106,559 tons in 1915, and 107,669 tons in 1914. The total sales (not including asbestic), in 1916 were 133,439 tons, valued at \$5,199,797, or an average of \$38.97 per ton, as compared with sales in 1915 of 111,142 tons, valued at \$3,553,166, or an average of \$31.97 per ton. Sales of asbestic in 1916 were 20,710 tons, valued at \$29,072, or an average of \$1.40 per ton, as against 25,700 tons, valued at \$21,819, or an average of 85 cents per ton in 1915.

Statistics of asbestos on hand December 31, 1916, were reported as 6,289 tons, valued at \$393,335, or an average of \$62.54 per ton, as compared with statistics on December 31, 1915, of 24,346 tons valued at \$656,832, or an average of \$26.98.

The average number of men employed in mines and mills during 1916 was 2,821 at a wage cost of \$1,659,913, as compared with 2,394 men in 1915 at a wage cost of \$1,091,076.

¹Chrysotile Asbestos: "Its Occurrence, Exploitation, Milling and Uses," by Fritz Cirkel. Mines Branch, Department of Mines, Ottawa, No. 69.

²Preliminary Report on the Serpentine and Associated Rocks of Southern Quebec, by J. A. Dresser, Geol. Surv. Memoir 22, 1913.

The total quantity of asbestos rock sent to mills during 1916 is reported as 1,822,461 tons, which with a mill production of 112,832 tons, shows an average estimated recovery of $6 \cdot 19$ per cent. In 1915 the recovery was $5 \cdot 71$ per cent, and in 1914 it was $6 \cdot 03$ per cent.

Statistics showing the output, sales, and stocks on hand, December 31st, by grades, for the past three years are shown in the following tables:—

(a) Exports.

The shipment of crude asbestos and mill stock since 1903 are separately shown in the next table. The 1916 shipments of crude are the largest that have been recorded and the 1916 shipment of mill stocks have been exceeded in tonnage only by the shipments of 1913, though present values are much in excess of those of the former year.

EXPORTS AND IMPORTS.

The exports of asbestos in 1916 are recorded as 96,775 tons, valued at \$3,872,463, as compared with exports in 1915 of 84,584 tons, valued at \$2,734,695. There were also exports of asbestic sand and waste in 1916 amounting to 33,564 tons, valued at \$241,272, as compared with 25,103 tons, valued at \$157,410 in 1915.

From 1903 to 1916 inclusive, the exports of asbestos from Canada have been over 85 per cent of the total shipments. The exports to Great Britain, United States, Germany, and to other countries are shown in the following table. Not all the asbestos consumed by each country mentioned is imported directly, a great deal of the European demands being supplied through United States firms, and a great deal of the German and Austrian pre war demands through Belgium, Holland and Italy.

Canada, though the leading country in the world in the production of asbestos, does not yet manufacture all the asbestos goods needed to supply the domestic market. Consequently, there is a considerable importation annually of asbestos goods under the Customs classification of "Asbestos in any form other than crude, and all manufactures thereof," the duty being 25 per cent. The 1916 imports were valued at \$334,670, as against \$168,894 in 1915, and \$282,053 in 1914.

The imports of asbestos into the United Kingdom are of interest, as indicating the market in that country, and the sources from which it is supplied. From 1907 to 1912 inclusive, the imports ranged between a low limit of 6,477 and a high limit of 8,620 tons. In 1913 there was a sudden increase to 12,995 tons, and in 1916 the imports had reached 29,917 short tons. Except in the years 1909, 1911 and 1912, direct imports from Canada comprised over 50 per cent of the total, and in 1915 they reached the proportion of 68.5 per cent of the total imports. In 1916 British imports from Canada fell off, but larger quantities were obtained from Russia and Portuguese East Africa.

Statistics as to these imports, indicating the sources of supply, appear in the following tables:—

Imports of Raw Asbestos into the United Kingdom.

BARYTES.

During recent years the only barytes deposit worked in Canada is one at Lake Ainslie, Inverness county, N.S., (Post Office, Scotsville), owned by Barytes, Limited, of Halifax, N.S. In Ontario a deposit located in Langmuir township, south of Porcupine, Ontario, has been under development during the past two seasons, by the Premier Langmuir Mines, Ltd.

Shipments of ground barytes in 1916 are reported as 1,368 tons, valued at \$19,393, as compared with 550 tons, valued at \$6,875 in 1914. In addition to the Canadian market, shipments are also reported as having been made to St. Johns, Nfd., Scotland, and New York.

Statistics of annual production and exports of barytes follow:-

Annual Production of Barytes.

Calendar Year.	Tons.	Value.	Value. per ton.	Calendar Year.	Tons,	Value.	Value.

^{*}Though not recorded, exports are apparently being made, see text.

Imports of barytes have not been separately shown in the Customs Department classification since 1890, but certain barium compounds are specifically mentioned. Imports of barium peroxide for the manufacture of hydrogen peroxide for the last nine months of 1913 were 26 tons, valued at \$3,600; for 1914, 42 tons, valued at \$5,722; for 1915, 18 tons, valued at \$5,250; and for 1916, 57 tons, valued at \$26,172. Imports of blanc fixe (artificial sulphate of barium) and satin white again showed an increase, being 3,747 tons, valued at \$86,306, as compared with 2,746 tons, valued at \$59,471 in 1915.

Statistics of imports appear in the following tables:-

Imports of Barytes.

Fiscal Year.	Cwt.	Value.	Fiscal Year.	Cwt.	Value.
1880		\$1,525 1,011 303 185 229 14	1886. 1887. 1888. 1889.	379 236	\$ 62 676 214 987 978

	3,747	86,306	23.03

CHROMITE.

The production of chromite has been confined to the vicinity of Black Lake and Coleraine, Megantic county, Quebec.

From 1910 to 1914 inclusive, no chromite was mined in Canada, and only a few small shipments were made from stock, but conditions brought about by the war have resulted in the development of a considerable industry and during the past two years shipments have been made much in excess of those of former years.

The total shipments of crude chromite ores in 1916 were 27,517 tons, valued at \$311,460. These ores contained a total of approximately 6,759 tons of Cr_2O_3 , or an average of about $24 \cdot 5$ per cent. A considerable portion of the low grade ore and sand, however, amounting in all to 14,242 tons was sent to concentrating mills for concentration before being marketed. The concentrates recovered averaged from 42 per cent to over 50 per cent of Cr_2O_3 . The final shipments of ore and concentrates would approximate 15,249 tons, valued at \$310,902. In 1915 the shipments were 12,341 tons, valued at \$179,543, much of which would average less than 35 per cent Cr_2O_3 .

Statistics of production since 1886 are shown in the following table:-

Annual Production of Chromite in Canada.

Calendar year.	Short tons.	Value.	Average price.	Calendar year.	Short tons.	Value.	Average price.
1886 1887 1888 to 1893 1894 1895 1896 1897 1898 1899 1900 1901 1902 1903	38 	\$ 945 570 No output 20,000 41,300 27,004 32,474 24,252 21,842 27,000 16,744 13,000 51,129	\$15.75 15.00 20,00 13.00 11.53 12.31 12.00 10.86 11.56 13.14 14.44 14.57	1904 1905 1906 1907 1908 1909 1910 1911 1912 1913 1914 1915 1916	8,575 9,035 7,196 7,225 2,470 299 157 	\$ 67,146 93,301 91,859 72,901 82,008 26,604 3,734 2,587 No output 1,210 179,543 311,460	\$11.05 10.88 10.17 10.13 11.35 10.77 12.49 16.48 }

In commenting on the industry during 1915, it was stated in last year's report that "All available sources are being searched for ore, old dumps re-sorted, prospects and mines re-opened, and every little pocket of ore gophered out and sold." These mining conditions have continued during 1916 and the ores mined have included all grades from lake sands and waste containing as low as 10 per cent Cr_2O_3 to small quantities of ores of 52 and 54 per cent grade.

The operation of a Customs Concentration mill by the Mutual Chemical Company of Canada provided a market for the waste sand and low

grade ores averaging from 10.50 to 16.30 per cent Cr₂O₃ which was raised by concentration to an average of over 50 per cent.

The general average of shipping ore was from 33 to 35 per cent Cr₂O₃. The ruling prices F.O.B. for ores of varying grade were as follows:

The fulling prices I to ibt for our	
Cr ₂ O ₃ contents:	Price.
25–29 per cent	\$16.00 per ton.
29–35 "	
35–38 "	20.00 "
38–50 "	\dots 25.65 per ton at 38% with
	an increase of 65 cents per
	unit.

Concentration.—The Lakeside mill at Black Lake was leased from the Black Lake Asbestos and Chrome Company, by the Mutual Chemical Company of Canada. The mill has been remodelled and was placed in operation in July, 1916. The mill equipment includes: jaw crusher, 6 5-stamp mills, and 7 Wilfley tables. About 2,000 tons per month have been treated.

This Company also built a new mill near Little St. Francis lake, with a rated daily capacity of 80 tons of ore, which was not placed in operation until December of 1916.

The marketing of chromite has been principally to destinations outside of Canada, all export being made under special license to approved consignees.

The exports of chromite from Canada during 1916 were, according to the records of the Customs Department, 12,633 tons, valued at \$152,532, or an average of \$12.07 per ton, as against 7,290 tons, valued at \$81,838, or an average of \$11.23, exported in 1915. On the other hand the imports into the United States from Canada, according to the published record of the Bureau of Foreign and Domestic Commerce of the United States, were in 1916, 12.220 long tons (13,686 short tons), and in 1915, 10,087 long tons (11,297 short tons), valued at \$117,302.

A table of imports of Canadian chromite into the United States from 1904-1916, and a table showing the total United States imports of chromium in 1915 and 1916, with sources of the same, follow:—

Imports of Chromite into the United States from Canada.1

^{*} As furnished by the Bureau of Foreign and Domestic Commerce, U.S. Dept. of Commerce, and published in "Mineral Resources of the United States, 1915," Part I, p. 2.

Small quantities of ferro-chrome have been imported into Canada, but there is no separate record of the quantities thereof. The imports of bichromate of soda in 1916 were 1,421,589 pounds, valued at \$362,571, as compared with 467,943 pounds, valued at \$34,692 in 1915. The imports of bichromate of potash in 1916 were 31,049 pounds, valued at \$13,381, as against imports in 1915 of 142,025 pounds, valued at \$17,413.

The principal producers of chromite were: Black Lake Asbestos and Chrome Co., Ltd., 60 Victoria St., Toronto; Dominion Mines and Quarries, Ltd., Dominion Bank Bldg., Toronto; Jos. M. Johnson, Black Lake, Que.; W. J. Woolsey, Black Lake, Que.; J. V. Belanger, Black Lake, Que.; Bennett, Martin Chrome Mines, Coleraine, Que.; Fletcher Pulp and Lumber Co., Sherbrooke, Que.; and the Mutual Chemical Company of America, New York.

COAL.

The term "production" in the text and tables of this report is used to represent the tonnage of coal actually sold, or used, by the producer, as distinguished from the term "output" which is applied to the total coal extracted from the mine, and which includes, in some cases, coal lost or unsaleable, or coal carried into stock on hand at the end of the year.

The peculiar situation which exists in respect to Canada's fuel supply, viz.: That notwithstanding the enormous resources which Canada possesses in coal, over 50 per cent of our consumption is imported from the United States, has been pointed out and explained annually in these reports. Our coal-fields are situated in the extreme east and in the western provinces, while our great central Provinces of Ontario and Quebec, the chief centres of population, are more easily and economically supplied with coal from the nearer coal-fields of Pennsylvania and Ohio. Further, we have no anthracite coal in eastern Canada and we have grown dependent upon the anthracite output of Pennsylvania for that most desirable of domestic fuels, which is not only the chief domestic, or house fuel in Manitoba, Ontario, and Quebec, but is imported even into our eastern coal districts.

Such a condition of international trade attracts little attention during normal times, and it is only under conditions such as those that have been brought about by the great war that the seriousness of the situation and its possibilities are realized. In round numbers we produced last year 14.5 million tons of coal of which we exported 2.1 million tons. But to satisfy our requirements we also imported 13 million tons of bituminous coal and 4.5 million tons of anthracite. It is most important indeed for Canada that there should be no sudden cessation of fuel imports.

The production of coal during 1916 was 14,483,395 short tons (12,931,603 long tons), valued at \$38,817,481, or an average of \$2.68 per ton, as compared with a production in 1915 of 13,267,023 short tons (11,845,556 long tons), valued at \$32,111,182, or an average of \$2.42 per ton, and a production in 1914 of 13,637,529 short tons (12,176,365 long tons), valued at \$33,471,801 or an average of \$2.45 per ton. Compared with 1915 the production in 1916 shows an increase of 1,216,372 tons, or about 9.2 per cent.

While exceeding the production of each of the two preceding years, that of 1916 was less than the production attained in 1912 and in 1913.

The average number of men employed during 1916 was 23,611 and total wages paid \$20,884,236, as compared with an average of 24,574 men employed in 1915 and \$17,385,200 paid in wages, and 27,571 men employed during 1914 and \$19,060,011 paid in wages.

The values given are partially estimated or assumed since complete returns have not been received with respect to amounts realized from coal sales. In the case of Nova Scotia an average value of \$3 per long ton

is placed upon the total production in 1916 as against a value of \$2.50 per long ton during the previous four years, while for British Columbia an average value of \$3.50 per long ton is used. The values placed upon the New Brunswick, Saskatchewan, and Alberta production are those furnished by the operating companies.

The total exports of Canadian coal in 1916 were 2,135,359 tons, valued at \$7,099,387 as compared with 1,766,543 tons, valued at \$5,406,058 in 1915. There is also a small export of coal "Not the produce of Canada" amounting in 1916 to 62,783 tons, valued at \$150,799.

The total imports of coal in 1916 were 17,580,603 tons, valued at \$38,289,666, as compared with imports in 1915 of 12,465,902 tons, valued at \$28,345,605.

The total consumption of coal in 1916 was 29,865,856 tons, as compared with 23,906,692 tons in 1915, and 26,852,323 tons in 1914.

Bituminous coal constitutes by far the largest proportion of the annual production. Lignite only is produced in Saskatchewan, and in Alberta it forms a large proportion of the Province's production. Of anthracite there is a small output, less than 200,000 tons annually, from one mine, at Bankhead, Alberta.

Statistics of the production of coal by provinces in 1916 and 1915 and comparisons of 1916 production with that of 1915, and of the production of 1915 with that of 1914, are given in the tables following:—

It will be noted that, with the exception of the Yukon, the western provinces and also New Brunswick, have made substantial increases in production in 1916, whereas Nova Scotia has shown a falling off. The proportion of the total production contributed by the different provinces therefore shows some variations from the previous years. Nova Scotia

with a production of 6,912,140 tons, a decrease of over 7 per cent, is still the largest producer, being credited with $47 \cdot 7$ per cent of the total, as against $56 \cdot 2$ per cent in 1915. Alberta, with an increase of 1,198,236 tons over the 1915 production (equivalent to $35 \cdot 6$ per cent) is again the second largest producer with $31 \cdot 5$ per cent of the total. The British Columbia production increased by 518,448 tons, or 25 per cent and amounted to $17 \cdot 8$ per cent of the total. Saskatchewan with an increase of 41,193 tons, or $17 \cdot 2$ per cent contributed only $1 \cdot 9$ per cent of the total, and New Brunswick and the Yukon each less than one per cent.

The relative importance of the different provinces as coal producers for a number of years past is shown in the next table, in which is set forth the proportional contribution of each province to the total tonnage of coal produced in Canada. For the first time the coal-fields on the Atlantic sea-board have produced less than half the total, although from 1910 to 1915 the combined production of the western provinces has been only a little less than 50 per cent of the total.

Percentage of Production Contributed by Provinces.

Province.	1874.	1890.	1900.	1910.	1911.	1913.	1914.	1915.	1916.

^{*}Alberta and Saskatchewan were established as provinces on September 1, 1905. For the purpose of comparison, the coal production during the years previous to that date has been separated according to the present boundaries of these Provinces.

The production and distribution of coal mined, by provinces, during 1915 and 1916, is shown in the following tables. The total sales for consumption in Canada during 1916 were 10,701,530 tons, an increase of 874,818 tons over 1915. The sales for export to the United States were 1,451,075 tons, an increase of 120,357 tons over 1915, and the sales to other countries were 284,513 tons, a falling off of 12,830 tons from 1915. The total sales of Canadian coal were 12,437,118 tons, as against 11,454,773 tons in 1915. The quantity used by colliery operators in the manufacture of coke, steel or brick, etc., was 804,814 tons, while 1,241,463 tons were used in the operation of collieries and by workmen, both in excess of the quantities similarly used during the previous year. The total stocks reported at the end of December were 78,702 tons, as against stocks at December 31, 1915, of 171,205 tons, and stocks at the end of December, 1913, of 500,477 tons.

The loss due to breakage, washing, unmarketable slack, so far as returns have been furnished, which are believed to be far from complete, were 385,835 tons. The total output including this unmarketable slack, is shown in the tables.

Statistics of the annual production of coal in Canada from 1785 to date, are given in the following table. The total production has been 254,452,575 tons. Of this amount Nova Scotia has produced 159,673,019 tons or 62·8 per cent; British Columbia 55,462,331 tons or 22 per cent; Alberta 35,398,773 tons or 13·9 per cent; Saskatchewan 2,824,126 tons or 1·11 per cent; New Brunswick 967,033 tons or 0·38 per cent, and the Yukon Territory 127,293 tons or 0·05 per cent.

*The total production for the years 1785 to 1873 is made up as follows:— Nova Scotia (1785 to 1873) 8,053,670 net tons or 7,190,777 gross tons at 81.75 per gross ton \$12,583,860 British Columbia (1836 to 1873) $\frac{538,480}{8,592,150}$, $\frac{480,785}{7,671,662}$, $\frac{4.00}{3}$, $\frac{400}{3}$, $\frac{12,583,860}{3}$, $\frac{12,583,860}{1,923,140}$

Export of Canadian Coal.

A record of coal sold for export, as reported by the operators, has already been given.

Statistics of the exports of coal according to the records of the Department of Customs, are given in the following tables. The exports of Canadian coal in 1916 were 2,135,359 tons, valued at \$7,099,387, or an average of \$3.32 per ton, as compared with exports in 1915 of 1,766,543 tons, valued at \$5,406,058, or an average of \$3.06 per ton, thus showing an

increase of 20.8 per cent in quantity and of 31.3 per cent in total value. A reference to the table giving the distribution of coal mined shows that nearly 50 per cent of British Columbia coal sales were for export, as against about 14 per cent of the Nova Scotia coal sales, and less than 2 per cent of the Alberta sales.

Besides Canadian coal exported, there is also a small re-export of "Coal not the produce of Canada."

Exports of Coal Produced during 1914-15-16.

The United States took 72.8 per cent of the Canadian exports in 1916; Newfoundland 11.9 per cent; Great Britain 4.6 per cent; and other countries 10.7 per cent. Exports to other countries which totalled 227,736 tons includes 45,343 tons to France, and 23,427 tons to Australia.

Imports of Coal.

The fact that the populous provinces of Quebec and Ontario have no coal-fields and can secure most of their requirements more cheaply from the coal-fields of Pennsylvania, Ohio, and Virginia, than from Canadian coal-fields accounts for Canadian imports exceeding 50 per cent of Canada's annual coal consumption.

The total imports of coal of all classes in 1916 were 17,580,603 tons, valued at \$38,289,666, as compared with total imports in 1915 of 12,465,902 tons valued at \$28,345,605, imports in 1914 of 14,721,057 tons valued at \$39,801,498, and imports in 1913 of 18,201,953 tons valued at \$47,949,119.

Imports of coal into Canada are subdivided into three classes as follows: anthracite, including anthracite dust; bituminous, round and run-of-mine; and bituminous slack such as will pass through a $\frac{3}{4}$ -inch screen.

The imports of anthracite represent, practically, Canada's consumption of coal of this variety, as less than 200,000 tons is produced yearly by Canada's one anthracite coal mine at Bankhead, Alberta. The 1916 imports were 4,570,815 tons valued at \$22,216,363, an average of \$4.86 per ton, exceeding by 498,623 tons, or 12·2 per cent, the imports in 1915, which amounted to 4,072,192 tons valued at \$18,753,980, or an average of \$4.61 per ton. Although exceeding the imports of the two preceding years, the imports of anthracite in 1916 were less than the 1913 imports which amounted to 4,642,057 tons.

The imports of bituminous coal of all classes were 13,009,788 tons, valued at \$16,073,303, as against 8,393,710 tons, valued at \$9,591,625 in 1915; 10,286,047 tons, valued at \$18,559,574 in 1914; and 13,559,896 tons, valued at \$25,914,280 in 1913.

The increase in bituminous imports in 1916 over those of 1915 is thus shown to be no less than 4,616,078 tons, or nearly 55 per cent.

As against this record of the Canadian Customs Department, it may be of interest to quote the record of exports of bituminous coal to Canada as published in the Reports of Trade and Navigation at Washington, for purposes of comparison. The United States record shows exports of bituminous coal to Canada during the twelve months ending December, 1916, of 13,260,110 short tons, as against 9,356,889 tons in 1915; 10,271,409 tons in 1914, and 15,115,733 tons in 1913.

The Canadian and United States records appear to correspond fairly closely for the years 1916 and 1914 but differ rather widely for the years 1915 and 1913. Monthly details of both records are shown on a following page.

The bituminous imports in 1916 included bituminous, round and runof-mine 9,504,552 tons, valued at \$12,368,679, or an average of \$1.30 per ton, and bituminous slack 3,505,236 tons, valued at \$3,704,624, or an average of \$1.06 per ton. The 1915 imports included bituminous, round, and run-of-mine 6,106,794 tons, valued at \$7,564,369, or an average of \$1.24 per ton, and bituminous slack 2,286,916 tons, valued at \$2,027,256, or an average of \$0.89 per ton.

A record of the annual imports of each of the three classes of coal since 1880 is shown in the following table:—

⁽a). Duty, 53 cents per ton. (b). Coal, anthracite, and anthracite coal dust; duty free. (c). Duty 14 cents per ton.

In view of the attention being given at the present time to the importance of imports of coal to Canada, additional tables have been introduced as follows: showing the monthly imports of bituminous and anthracite coal since 1913, such figures as are available for the first few months of 1917 being added to the record.

[†] In the anthracite column the imports show a very considerable increase in 1888 over 1887, an increase of over 94 per cent, the falling off again in 1889 being quite as remarkable. The average values per ton for the three years 1887, 1888, and 1889, were \$4.02, \$2.47 and \$4.03, respectively. Although a duty of 50 cents per ton on anthracite coal was removed May 13, 1887, it is hardly thought this would account for the changes indicated, and unless some error may possibly have crept into the Trade and Navigation report, no explanation is available.

For purposes of comparison a table has been added compiled from the monthly reports of Commerce and Navigation published at Washington showing the monthly exports of coal during the same period from the United States to Canada.

Since Canadian imports are derived almost entirely from the United States these records might be expected to correspond fairly closely. It will be noted, however, that month by month they show considerable differences which may in part be explained by the warehousing of imported coal and the consequent delay in entering same for consumption. Serious differences are, however, shown in the yearly totals of imports of bituminous coal for the years 1913 and 1915, although the totals for 1914 and 1916 appear to correspond very well.

Consumption of Coal.

The total consumption of coal in Canada estimated on the basis of production, imports and exports, was in 1916, 29,865,856 tons, as compared with 23,906,692 tons in 1915; 26,852,323 tons in 1914; and 31,582,545 tons in 1913.

In connexion with records of consumption it may be of interest to record the very large percentage of Canadian coal consumption used by railway locomotives. During the twelve months ending June 30, 1916, the tonnage of coal used by locomotives amounted to no less than 8,677,354 tons, only a little less than one third of the total consumption.

The quantity of coal consumed by railway locomotives in recent years, as compiled from "Railway Statistics" published by the Department of Railways and Canals, is as follows:—

Annual Consumption of Coal by Railway Locomotives.

Year ending June 30th.	Anthracite.	Bituminous.	Total.
1911	6,444	6,769,903	6,776,347
1912	5,374	7,732,938	7,738,312
1913	4,662	9,040,963	9,045,625
1914	5,271	8,268,186	8,273,457
1915	3,691	6,673,845	6,677,536
1916	4,899	8,672,455	8,677,354

Nova Scotia.

The production of coal in Nova Scotia in 1916 was 6,912,140 tons as compared with a production in 1915 of 7,463,370 tons, showing a decrease of 551,230 tons, or $7\cdot39$ per cent.

The total sales of coal during 1916 were 5,950,547 tons of which 5,226,902 tons were sold for consumption in Canada, 446,038 tons for export to the United States, and 277,607 tons for export to Newfoundland and other countries.

The total quantity used by producers and in connexion with the collieries was 961,593 tons, including 285,892 tons used by producers in making coke and for other commercial purposes, and 675,701 tons used in the operation of the collieries, or by workmen.

A considerable tonnage of coal reported as sold for consumption in Canada is also used in the manufacture of coke, the total coal charged to coke ovens in the Province during the year being 985,063 tons.

The Dominion Coal Company has for many years been the principal operator, the total production of this firm's collieries at Cape Breton and at Springhill being 4,976,137 tons, or about 72 per cent of the Province's production. The Nova Scotia Steel and Coal Company produced 664,192 tons or 9.7 per cent of the total; the Acadia Coal Company 439,177 tons or 6.4 per cent; the Inverness Railway and Coal Company 298,302 tons or 4.3 per cent; the Maritime Coal, Railway and Power Company 232,877 tons, and the Intercolonial Coal Mining Company 167,911 tons. Cape Breton maintained its position as the chief coal producing county with 76.9 per cent of the total coal raised, Cumberland county being second with 9.9 per cent. Pictou county is credited with 8.9 per cent, and Inverness county with 4.3 per cent of the total.

For a number of years Nova Scotia mines, chiefly those of Cape Breton, have been shipping from 2,000,000 to 2,500,000 tons of coal to Montreal and other Quebec markets, via the St. Lawrence. During 1916, however, only 1,114,337 tons of Nova Scotia coal were marketed in Quebec province, as against 2,048,222 tons in 1915. The current year of 1917 will apparently show almost an entire cessation of St. Lawrence shipments owing to the withdrawal of boats for war service, the reduced output of coal, and the increased demand for bunkering purposes and general consumption in the Maritime Provinces.

The quantity of Nova Scotia coal marketed in the Maritime Provinces in 1916 exceeded by about 1,000,000 tons the quantity so marketed in 1915, and amounted to 62 per cent of the total in 1916, as against 48.6 per cent of the total in 1915 (see table "Distribution of Coal Sold.") Sales of "Bunker Coal" also show a very large increase in 1916, having increased from 383,273 tons in 1915 (12 months ending September) to 604,601 tons in 1916.

*Sales include coal used for making coke and steel.

The coal statistics prepared and published by the Nova Scotia Department of Mines cover the fiscal years ending September 30, and the long ton of 2,240 pounds is used exclusively in these reports. A number of tables appearing in the Provincial report for the fiscal year 1916 are reproduced below, the figures having been re-calculated in tons of 2,000 pounds.

For the Provincial, or fiscal year ending September, 1916, the total coal output was slightly greater than during the corresponding year ending September, 1915. It is apparent, therefore, in view of the falling off in the calendar year that the coal production during October, November, and December of 1916 was much less than during the same months of 1915.

New Brunswick.

The production of coal in New Brunswick in 1916 was, 143,540 tons as against 127,391 tons in 1915, showing an increase of 16,149 tons or over 12.5 per cent. This is the largest production of coal that has been recorded for this province. Three operators have neglected to comply with the request of this Department for detailed returns of their production but close estimates have been made based on statistics furnished by the Provincial Department of Lands and Mines. The total shipments from New Brunswick collieries, as reported by the Deputy Minister of Lands and Mines, were 134,063 short tons.

We are, through the courtesy of the operators, permitted to publish a record of the production from individual properties, as shown in the accompanying table.

The coal producing areas include the Grand Lake coal-fields in Queens and Sunbury counties, and the Beersville area in Kent county. In the Grand Lake area the coal seam, which varies in thickness from 20 to 32 inches, is found at a depth of from 30 to 60 feet below the surface.

The Minister of Lands and Mines, in his annual report for the year ended 31st October, 1916, states: "While there was a small quantity of coal mined at Beersville, Kent county, the bulk of the mining has been in the Grand Lake region. The Minto Coal Company are the largest operators, and have much the best equipment for mining among the operators in this district. They, with all other coal mining companies, have been seriously hampered throughout this third year of the war for the want of labor. There has been a demand for coal much greater than could be satisfied and prices never were so good, but the large number of enlistments among mine laborers has limited the output."

Saskatchewan.

The coal deposits of Saskatchewan furnish coal of the lignite variety only. As some of the physical characteristics of this lignite in its raw state tend to prevent its successful and economical use, the yearly production of recent years shows only a slight increase in no way comparable with the increase in population of the Province, and the consequent increased demand for fuel for heating, and the generation of power. The importance of devising better methods for utilizing this lignite, of which vast quantities exist in the adjacent Province of Alberta, as well as in the Province of Saskatchewan, has prompted both the Government of the Province of Saskatchewan, and the Fuel Testing Division of the Mines Branch, Ottawa, to undertake investigations of western lignites, the first results of which have already been published.¹

The production of lignite in 1916 from 33 collieries was 281,300 tons, valued at \$441,836, as compared with 240,107 tons, valued at \$365,246 in 1915, an increase of 41,193 tons, or 17 per cent.

The 1916 production included 265,506 tons of coal sold and 15,794 tons used by producers for colliery consumption by workmen or in brick-making.

The output of coal comes chiefly from the vicinity of Estevan, located on the Souris river, near the southeastern corner of the Province. Coal deposits exist for 75 or 100 miles in a northwest-southeast direction along the Souris river, on Big Muddy creek draining Willowbunch lake (only lately reached by a branch line of railway) and on the south branch of the Saskatchewan river, about 100 miles southwest of Saskatoon.

^{1 &}quot;The Carbonizing and Briquetting of Lignite," by S. M. Darling, 1915. Investigation for the Government of the Province of Saskatchewan.

Results of the Investigation of Six Lignite Samples obtained from the Province of Alberta, by Haanel and Blizard, 1915. Mines Branch publication No. 331.

The production by the principal operators in 1916 and 1915 is shown in the following tables:—

(a) From Turtle Mountain district, Manitoba.(b) Including a small quantity from the Turtle Mountain district, Manitoba.

Alberta.

Lignite, bituminous, and anthracite coals are all produced in Alberta. Bituminous coal comprises about 50 per cent of the production, lignite over 45 per cent, and anthracite less than 5 per cent.

As mentioned in the notes on the Saskatchewan production, the vast tonnage of lignites available in the western provinces has prompted investigations with a view to the better utilization of these lignites.

The production of coal in Alberta in 1916 was the highest recorded for the Province and amounted to 4,559,054 tons valued at \$11,386,577, or an average of \$2.50 per ton, as compared with a production in 1915 of 3,360,818 tons, valued at \$8,283,079, or an average of \$2.46 per ton, showing an increase in 1916 of 1,198,236 tons, or 35·7 per cent. The highest production previously recorded was that of 1913 compared with which 1916 shows an increase of over half a million tons.

There are many small operators in the Province—in fact so many new operators are producing coal each year that it is difficult to keep lists of them complete. The production of each of the larger collieries is shown in the following table. In 1916 there were 42 companies reporting a production in excess of 10,000 tons, the aggregate production by these firms being 95·5 per cent of the total of the Province. Eleven of these companies reported a production exceeding 100,000 tons each, the largest operators being the Canadian Pacific Railway with a total of 588,877 tons from Bankhead and Lethbridge; West Canadian Collieries, Ltd., with 530,201 tons from Bellevue and Greenhill; and North American Collieries, Ltd., with 372,656 tons from Lovettville, Coalhuist, and Evansburgh.

Of the total production 4,173,567 tons were reported as sales, including 4,113,403 tons sold for consumption in Canada and 60,164 tons sold for

export to the United States; 385,487 tons were used by the producers including 67,106 tons in coke ovens and 318,381 tons used for colliery operation and by workmen.

Statistics collected and published¹ by the Chief Inspector of Coal Mines for Alberta, covering coal mining operations in 1916 are quoted in the following tables.

The total output as given by Mr. Stirling for 1916, was 4,648,604 tons, or, after deducting 124,003 tons of slack put on the waste heap 4,524,601 tons of marketable coal. These records differ but slightly from those collected by this Department. The total sales, according to the provincial record were, including briquettes 4,227,164 tons of which 2,956,205 tons were sold for consumption in Alberta; 89,582 tons for consumption in British Columbia; 1,021,656 tons for consumption in Saskatchewan; 98,629 tons for consumption in Manitoba; and 61,092 tons for export to the United States. It is stated with respect to the 2,956,205 tons sold for consumption in Alberta that this includes coal sold to railway companies for the use of locomotives, a considerable percentage of which was probably used in other provinces.

It will be noted that a considerable proportion of Alberta's output is marketed in Saskatchewan, and a small quantity in Manitoba and British Columbia.

The imports of coal into Canada from the United States through ports lying between Port Arthur and the western boundary of Alberta during the calendar year 1916, are reported by the Customs Department as 2,910,576 tons, including 2,376,934 tons of bituminous coal and 533,642 tons of anthracite.

The Chief Inspector in reporting on the coal mining industry during the year, makes the following amongst other comments:—

"Several small mines have been opened in the Peace River district and although these mines are operated on a small scale at present, it is probable that with the increased settlement that is taking place in the district north of Edmonton, these mines should be fairly large producers in the near future.

"It will be noted from the following tables that the output of coal for the year 1916 exceeded that for the year 1915 by 1,213,713 tons, thus establishing a record output for the province. Notwithstanding the increased output, however, it will also be noted that 2,910,576 tons of coal were imported during the year 1916 into the territory lying between Port Arthur and the western boundary of Alberta. As I have already stated in previous reports this imported coal is being consumed in territory which, in my opinion, should be supplied by the production from the mines situated in the Provinces of Alberta and Saskatchewan. Although a larger amount of coal was shipped last year to Saskatchewan and Manitoba than in previous years, I am of the opinion that even with the present freight rates a much larger market could be obtained in these provinces than we have at present.

Annual Report of the Department of Public Works, Province of Alberta, Edmonton.

"The principal development in the province during the last year has been in the Drumheller district, where a considerable amount of underground development has been done and a number of new plants erected."

		Lignite. Bituminous. Anthracite.	Total	Briquettes	Coke

The bituminous coal shown in these tables as being sold for consumption in Alberta includes coal sold to railway companies for the use of locomotives, a considerable percentage of which was probably used in other provinces.

The anthracite and briquettes in the above table were all produced at Banff, and the coke in the Crowsnest district.

British Columbia.

The production of coal in British Columbia in 1916 was 2,584,061 tons as compared with 2,065,613 tons in 1915, an increase of 518,448 tons, or 25 per cent.

Of the total production in 1916, 1,904,092 tons were reported as sales including 958,761 tons sold for consumption in Canada; 938,425 tons sold for export to the United States, and 6,906 tons sold for export to other countries; 679,969 tons were used by producers including 450,066 tons for making coke and 229,903 tons for the operation of collieries and for workmen.

The production of collieries on Vancouver Island was 1,472,970 tons, of which 770,869 tons were sold for consumption in Canada; 498,672 tons for export to the United States, and 6,906 tons for export to other countries, 55,436 tons were used in the coke ovens at Comox, and 141,087 tons were used in the operation of collieries and by workmen. Vancouver Island collieries produced 57 per cent of the production of the Province, while compared with the previous year there was an increase of 464,502 tons or about 46 per cent.

The production in the Crowsnest district was 988,188 tons of which 84,357 tons were sold for consumption in Canada, and 433,387 tons for export to the United States; 394,230 tons were used for making coke, and 76,214 tons were used in the operation of collieries and by workmen. This district contributed $38 \cdot 2$ per cent of the total in 1916, and the production exceeded that of 1915 by 36,899 tons.

The production of Nicola and Princeton, etc., was 122,903 tons, of which 103,535 tons were sold for consumption in Canada, and 6,366 tons for export to the United States; and 12,602 tons were used in the operation of collieries and by workmen. These areas contributed about 5 per cent of the total, and the production showed an increase of 17,047 tons, as compared with 1915.

The three largest operators were the Crow's Nest Pass Coal Company with 910,886 tons, the Canadian Collieries (Dunsmuir), Limited, with 616,112 tons, and the Western Fuel Company with 625,562 tons. These three companies contributed over 83 per cent of the Province's production.

^{*}This production is obtained by adding "Home Consumption" and "Sold for Export."

Yukon.

Coal production in the Yukon in 1916 was reported as 3,300 tons, all the product of the Tantalus mine of the Five Fingers Coal Company, near White Horse.

The colliery of the Northen Light, Power and Coal Company on Coal Creek was idle throughout the year.

 $[\]dagger 52,935$ tons of this amount were exported as sales without the division into "Home Consumption" and "Sold for Export."

COKE.

The accompanying statistics cover only the production of coke in by-product and Beehive coke oven plants and do not include retort coke recovered by gas companies.

Both domestic and imported coal are used in the manufacture of coke in Canadian coke oven plants.

In 1916, 1,501,835 tons of domestic, and 633,076 tons of imported coal were charged to coke ovens from which was obtained an output of 1,448,782 tons of coke, thus averaging 0.679 tons of coke per ton of coal charged. Coke from by-product ovens comprised 69 per cent of the total.

In 1915, 1,425,172 tons of domestic and 431,221 tons of imported coal were charged to coke ovens from which was obtained an output of 1,200,766 tons of coke, thus averaging 0.647 tons of coke per ton of coal charged. Coke from by-product ovens comprised 66 per cent of the total.

In 1914, 1,038,235 tons of domestic, and 503,312 tons of imported coal were used to produce an output of 1,015,253 tons of coke, showing a return of 0.658 tons of coke per ton of coal charged. Coke from by-product ovens comprised 67 per cent of the total.

The amount of coke sold or used by coke producers in 1916 was 1,469 741 tons as compared with 1,170,473 tons in 1915, an increase of 299,268 tons or over 25 per cent.

In addition to the tonnage sold or used by producers there was imported during 1916, 757,116 tons of coke, while the exports totalled 48,539 tons. The Canadian consumption for 1916 was therefore 2,178,318 tons, an increase of 405,857 tons or nearly 23 per cent over the consumption in 1915. The consumption of oven coke during recent years has been as follows: 1,285,228 tons in 1908; 1,449,369 tons in 1909; 1,581,832 tons in 1910; 1,677,188 tons in 1911; 1,981,832 tons in 1912; 2,186,170 tons in 1913; 1,509,068 tons in 1914, and 1,772,461 tons in 1915.

†Duty free.

In Nova Scotia coke was made at Sydney, and Sydney Mines, the ovens at Westville being idle throughout the year.

In Ontario the production came from the Algoma Steel Corporation's

plant at Sault Ste. Marie.

In Alberta the plants at Lille and Passburg were idle, while one plant at Coleman was in operation part of the year.

In British Columbia coke was made by the Crow's Nest Pass Coal Company at Fernie and Michel, and by the Canadian Collieries (Dunsmuir)

Limited, at Union Bay.

The coke production of the eastern provinces is used almost entirely in the iron and steel industry, while that of the western provinces is used chiefly by the copper and lead smelters, finding a market in the United States as well as in Canada.

In Nova Scotia at the close of 1916 there were 697 ovens in operation, and 109 idle. The ovens formerly operated at Stellarton (45) and London-derry (97) are not included amongst those idle, being regarded as abandoned. The Dominion Iron and Steel Company had 547 of its 620 ovens in operation. All these ovens are of the Otto-Hoffman by-product type, from which are recovered tar, sulphate of ammonia, and gas. The gas is used in the company's steel plant operations, and the sulphate of ammonia in the crystallized state is disposed of to the trade. The crude tar is sold to the Dominion Tar and Chemical Company, who have a plant close at hand for the separation of a variety of coal-tar products. All the ovens of the Nova Scotia Steel and Coal Company were in operation at the close of the year. The surplus gas from the Bauer ovens is used for the production of steam for the power generating plant.

In Ontario the Algoma Steel Company's Koppers Regenerative By-Product ovens, at Sault Ste. Marie reported now as numbering 104 in place of 110, as formerly, were in operation most of the year, none being idle on December 31. At the Sault Ste. Marie plant, crude tar, crystallized sulphate of ammonia, and gas are recovered. Benzol, toluol, and other hydro-carbons were recovered by the Toronto Chemical Company, a branch of the Dominion Tar and Chemical Co. The latter company also takes

the tar, which is treated for the separation of coal-tar products.

In Alberta, all of the Western Canadian Collieries' 50 Bernard ovens at Lille, all of the Leitch Collieries' 101 Mitchell rectangular ovens at Passburg, and some of the International Coal and Coke Company's 216 Beehive ovens at Coleman, were idle throughout the year. The latter company had 120 ovens in operation on December 31.

In British Columbia at the end of the year the Crow's Nest Pass Coal Company had only 24 of its 454 Beehive ovens, at Fernie, idle, and 30 of its 486 at Michel, idle; its 240 Beehive ovens at Carbonade have been idle for some years and are now regarded as permanently abandoned. The 240 Beehive ovens at Hosmer were idle throughout the year. On

Vancouver island the Canadian Collieries (Dunsmuir), Limited, in 1915 rebuilt and placed in operation 100 ovens at Union Bay, and all were in operation at the end of 1916.

The exports of coke in 1915, as per Customs record, were 48,539 tons, principally from British Columbia, as against exports in 1915 of 35,869 tons.

Coke Oven By-Products.

Coke oven by-products were recovered at Sydney, N.S., and Sault Ste. Marie, Ont. The 1916 recoveries included 9,012,202 gallons of tar; 11,040 tons of sulphate of ammonia, together with important quantities of benzol, toluol, and solvent naphthas. In 1915 the recoveries were 7,365,931 gallons of tar, and 10,448 tons of sulphate of ammonia.

Annual Production of Coke Oven By-Products.

The imports of sulphate of ammonia in 1916 are reported as 293,096 pounds valued at \$9,672, as against imports in 1915 of 503,158 pounds valued at \$14,637, and in 1914, of 763,597 pounds valued at \$21,335.

Exports of sulphate of ammonia are not separately recorded.

FELDSPAR.

The production of feldspar in 1916 was 19,488 tons, valued at \$71,407, or an average of \$3.66 per ton, as compared with a production in 1915 of 14,559 tons, valued at \$57,801, or an average of \$3.92 per ton.

The greater part of the feldspar shipped from Canadian mines is marketed with the pottery manufacturers in the United States. A small quantity of feldspar was sold in 1916 for experimental work in the recovery of potash.

The exports during 1915 and 1916 have not been separately recorded,

having been grouped in the Customs classification with talc.

Statistics of production and exports of feldspar are given in the following table:—

Production and Exports of Feldspar.

^{*}Exports.
**Not separately stated.

The Canadian production of feldspar comes chiefly from the counties of Frontenac and Lanark in Ontario, and the counties of Ottawa and Labelle in Quebec. The principal shippers are: Feldspars Limited, Hartington, Ont.; Feldspar Quarries Company, Verona, Ont.; S. H. Orser and Company of Perth, Ont.; the International Feldspar Co., Ltd., Verona and Ottawa, Ont., and the Eureka Flint and Spar Company, East Templeton, Que. For several years there have been small shipments by Messrs. O'Brien & Fowler, Ottawa, from the Villeneuve mine, Township of

Villeneuve, Labelle county, Quebec, where an exceptionally pure white feldspar, suitable for the manufacture of artificial teeth, has been mined.

The feldspar deposits and industry have been the subject of a special report published by the Mines Branch entitled "Feldspar in Canada."

The accompanying table of imports of potash salts into Canada has been compiled from the Customs Reports with a view to indicating the present Canadian market for such products. Canadian potash feldspar deposits may become an important source of potash if any of the attempts now being made to utilize potash silicate rocks as a source of potash should meet with commercial success.

¹ "Feldspar in Canada," by Hugh S. de Schmid, Mines Branch, Department of Mines, Ottawa, 1916—Report No. 401.

FLUORSPAR.

Shipments of fluorspar during 1916 have been reported, amounting to 1,284 tons, valued at \$10,238, this being the first production since 1912. The fluorspar was obtained from three properties in the county of Hastings, near Madoc, Ont., viz.: Messrs. Wellington and Munro, operating on lot 13, concession XII, of Huntingdon tp.; Messrs. Cross and Wellington, operating the Perry mine, on lot 11, concession XIII, of Huntingdon tp.; and C. R. Ross, operating The McIlroy property on lot 2, concession IV, of Madoc tp. Of the total shipments, 525 tons were marketed in the United States and the balance in Canada, principally with the steel companies. Prices obtained until December were about \$6 per ton F.O.B., but during the last month of the year a rapid increase to \$15 per ton took place.

Several occurrences of fluorspar are known near Madoc, in Huntingdon and Madoc townships, in Hastings county, Ontario. In 1905 Mr. Stephen Wellington opened a deposit on lot I, con. IV, Madoc township, and made a shipment of 12 tons to Port Hope, Ontario. In 1910 Messrs. Gillespie and Wellington mined from a deposit on lot 10, con. XIV, of the Township of Huntingdon, about 200 tons of material from which 2 tons of fluorspar valued at \$15 were shipped. Additional work in succeeding years resulted in shipments in 1911 of 34 tons, valued at \$238, to the smelter at Deloro, and to steel foundries at Welland, and in 1912 of 40 tons, valued at \$240, to the Copper Cliff smelter. This property, known as the Rogers Fluorspar mine, is now owned by Messrs. Cross and Wellington, Madoc, who have, however, abandoned operations thereon, to re-open the Perry mine on lot 11, con. XIII. Other occurrences of fluorspar have been noted on lot 12, con. XIII of Huntingdon township, and on lot 2, con. III, Madoc township.

Imports of fluorspar are not shown separately in the Reports of the Customs Department. The consumption in steel works though is considerable and reports from steel companies covering their operations show the consumption from 1910 to 1916 inclusive, to have been respectively: 7,461 tons, 8,067 tons, 9,709 tons, 10,687 tons, 7,842 tons, 13,520 tons,

and 13,213 tons.

Imports of hydrofluosilicic acid since 1910 have been as follows:-

Imports of Hydrofluosilicic Acid.

Calendar year.	Pounds.	\$
1910	187,785 223,706 302,918 1,182,293 1,384,087 1,117,874 896,426	10,813 9,173 24,891 46,517 41,576 36,085 28,611

The Consolidated Mining and Smelting Company, operators of the Trail smelter, who have been probably the largest consumers of hydrofluosilicic acid, which is used in the electrolytic refinery of lead, have recently added to their equipment a plant for the manufacture of this acid and it is reported that the fluorspar required will be imported from United States sources.

The production of fluorspar in the United States in 1916, as reported in "Mineral Resources" of the U.S. Geological Survey, was 155,735 tons, valued at \$922,654.

GRAPHITE.

The total shipments of milled or refined graphite in 1916 by Canadian producers was 3,955 tons, valued at \$325,362, or an average of \$82.28 per ton, as compared with shipments in 1915 of 2,635 tons, valued at \$124,223, or an average of \$47.14 per ton.

This production is the largest that has been recorded in Canada, and is an evidence of the extent to which the Canadian graphite industry has responded to the demand for this product created by the war.

Shipments include various grades of product with quite a wide range in price. For No. 1 flake, operators report as high as 16 cents per pound, equivalent to \$320 per ton.

The following table gives statistics of annual production since 1886.

Annual Production of Graphite.

Calendar Year.	Tons.	Value.	Calendar Year.	Tons.	Value.

^{*}Exports.

In 1916, mills at Buckingham and St. Remi d'Amherst, Quebec, shipped 479 tons, valued at \$75,776, and mills at Harcourt, Port Elmsley, and Calabogie, Ontario, made shipments aggregating 3,476 tons, valued at \$249,586. In 1915, the Quebec shipments were $75\frac{1}{2}$ tons, valued at \$5,431, and the Ontario shipments $2,559\frac{1}{2}$ tons, valued at \$118,792.

The exports of graphite in 1916, according to Customs records, included 311 tons of crude ore and concentrates, valued at \$13,114, an average of \$42.17 per ton, together with manufactures of graphite valued at \$304,919, or a total valuation of \$318,033. The exports in 1915 included crude ore and concentrates 263 tons, valued at \$12,009, an average of \$45.62 per ton, together with manufactures of graphite, valued at \$84,316, or a total value of \$96,325.

Artificial Graphite.

Artificial graphite has been manufactured in electric furnaces at Niagara Falls, Ontario, for several years by the International Acheson Graphite Company. The annual production has been as follows:—

Annual Production of Artificial Graphite.

Calendar Year.	Pounds.	Calendar Year.	Pounds.
1906	445,047 407,779 428,540 513,436 2,442,166 2,172,098	1912	2,302,625 2,184,472 1,234,239 497,271 525,048

GYPSUM.

In 1916, the total quantity of crude gypsum mined was 424,431 tons, as compared with 505,989 tons in 1915, and 579,841 tons in 1914. The quantity calcined in 1916 was reported as 94,414 tons, as compared with 84,763 tons in 1915, and 138,212 tons in 1914. The total shipments in 1916 were: 342,915 tons, valued at \$738,593 and included 249,893 tons of "lump," valued at \$263,050, or an average of \$1.05 per ton; 15,680 tons of "crushed" valued at \$28,111, or an average value of \$1.79 per ton; 6,096 tons of "fine ground," valued at \$19,673, or an average of \$3.23 per ton, and 71,246 tons of "calcined," valued at \$427,759, or an average of \$6 per ton.

The total shipments in 1915 were 474,815 tons, valued at \$854,929, and included 346,947 tons of "lump," valued at \$375,815, or an average of \$1.08 per ton; 48,735 tons of "crushed," valued at \$67,007, or an average of \$1.37 per ton; 6,455 tons of "fine ground," valued at \$22,767, or an average of \$3.53 per ton; and 72,678 tons, of "calcined," valued at \$389,340, or an average of \$5.36 per ton.

A report¹ on the gypsum industry in Canada has lately been issued by the Mines Branch of the Department of Mines, Ottawa. This describes in detail the operated deposits in the different provinces, and the method of treatment followed in preparing gypsum for the market.

The total quantity of gypsum mined and the total quantity calcined during the past ten years is shown in the following table:—

Gypsum Mined and Gypsum Calcined.

(SHORT TONS.)

Year.	Total gypsum mined.	Gypsum calcined.	Year.	Total gypsum mined.	Gypsum calcined.
1905 1906 1906 1907 1908 1909 1910	489,962	26,855 28,831 34,752 48,727 63,670 69,889	1911. 1912. 1913. 1914. 1915. 1916.	684 726	76,718 133,392 147,532 138,212 84,763 94,414

About 59 per cent of the gypsum mined in 1916 was shipped in lump form as quarried and of this a very large portion went to calcining mills in the United States. Almost all of the shipments of crude lump are made from the Maritime provinces from which cheap transportation by water is easily secured. There was calcined 94,414 tons, or 2·2 per cent

¹Gypsum in Canada; Its Occurrence, Exploitation and Technology. L. H. Cole, Mines Branch, Dept. of Mines, Ottawa, Canada, 1915, No. 245.

of the tonnage mined. There was shipped as crushed and fine ground 21,776 tons, or $5 \cdot 1$ per cent of the tonnage mined.

Statistics of the shipments of crude and calcined gypsum since 1905, and of the annual production of gypsum products since 1886, are shown in the tables following:—

EXPORTS AND IMPORTS.

Statistics of exports and imports of gypsum, as compiled from the Reports of Trade and Navigation, are shown in the accompanying tables. The exports of crude gypsum during the calendar year 1916 were 221,156 tons, valued at \$252,476, or an average of \$1.14 per ton, as compared with exports in 1915 of 292,234 tons, valued at \$336,380, or an average of \$1.15 per ton.

There were also exports of ground gypsum in 1916, valued at \$154,630, as compared with exports in 1915, valued at \$80,933. The total value of exports of gypsum, both crude and ground, was \$407,106, as compared with exports in 1915, valued at \$417,313.

The imports of gypsum of all grades during the calendar year 1916, reached a value of \$43,291, and included: crude gypsum 3,022 tons valued at \$14,358, or an average of \$4.75 per ton; ground gypsum 282 tons, valued at \$3,404, or an average of \$12.07 per ton; and Plaster of Paris 3,786 tons, valued at \$25,529, or an average of \$6.74 per ton.

The imports, in 1915, were valued at \$25,819, and included: crude gypsum 1,799 tons, valued at \$7,734 or an average of \$4.30 per ton; ground gypsum 134 tons, valued at \$2,253, or an average of \$16.79 per ton (this record appears open to question); and plaster of Paris 2,441 tons, valued at \$15,832, or an average of \$6.48 per ton.

Crude gypsum, duty free. Ground gypsum, duty 15 per cent. Plaster of Paris, duty 12½c per 100 lbs.

The Nova Scotia production, and the larger part of the New Brunswick production as well, is almost all disposed of in the United States market. The large deposits and the excellent facilities for water transportation are responsible for the gypsum being shipped as quarried to grinding and calcining plants outside these provinces.

Returns from Nova Scotia operators show the tonnage of gypsum mined during recent years to have been as follows: 298,035 tons in 1916; 317,076 tons in 1915; 339,747 tons in 1914; and 423,977 tons in 1913. Of the total tonnage mined in 1916, about 93.5 per cent was extracted from quarries in Hants county, near Windsor, Walton, and Cheverie, and the rest came from quarries at Quarry St. Anns and Iona, Victoria county.

In New Brunswick four properties were operating, three near Hillsborough in Albert county and the Old Stewart property (Arbuckle quarry) at Plaster Rock. The tonnage of gypsum mined in 1916 was 53,003 tons, as compared with 78,640 tons in 1915, 86,912 tons in 1914, and 112,739 tons in 1913. About 44·1 per cent of the output was shipped in crude form, either lump or ground, and the balance was calcined. Shipments were made to the United States, Australia and New Zealand as well as to the Canadian market.

In Ontario, there was a large falling off in the quantity of gypsum mined, the figures for recent years being as follows: 39,393 tons in 1916, 85,444 tons in 1915 and 89,159 tons in 1914. The total sales in 1916 including crushed, fine ground, and calcined (both that sold as such, and as an ingredient of wall plaster), amounted to 36,668 tons, valued at \$116,086. The total sales of crude, ground and calcined gypsum in 1915 were 81,172 tons, valued at \$190,422.

Manitoba's shipments of gypsum are almost entirely in the calcined form. The total quantity of crude gypsum mined in 1916, was 34,000 tons, as compared with 24,859 tons in 1915; 64,023 tons in 1914; 76,500 tons in 1913; and 80,000 tons in 1912. The shipments were 28,489 tons, chiefly calcined, valued at \$91,283, as compared with shipments of 20,278 tons, valued at \$139,721 in 1915, 53,423 tons, valued at \$382,563 in 1914, and 65,100 tons in 1913, valued at \$479,500.

The following is a list of the principal operators:—

MAGNESITE.

The shipments of magnesite during 1916 were 55,413 tons, valued at \$563,829, and with the exception of a small experimental shipment from Atlin, B.C., were derived from the magnesite deposits in Argenteuil county, Quebec.

The 1915 shipments were 14,779 tons, valued at \$126,584 and those of 1914, 358 tons, valued at \$2,240, thus indicating the rapidity with which the mining of magnesite has been developed in this district.

The Argenteuil deposits have been worked in a small way since 1908, and a record of annual shipments as well as of imports of magnesia are shown in the accompanying table. There is no separate record of the imports of magnesite.

Annual Production of Magnesite and Imports of Magnesia.

Calendar Year.	SALES OF M	AGNESITE.	Imports of Magnesia.		
Calcillat reat.	Tons.	Value.	Tons.	Value.	
1908. 1909. 1910. 1911. 1912. 1913. 1914. 1915.	120 330 323 991 1,714 515 358 14,779 55,413	\$ 840 2,508 2,160 5,531 9,645 3,335 2,240 126,584 563,829	233 253 379 145 127 91 195		

There were two principal operators in the Quebec field; the North American Magnesite Co., shipping calcined as well as crude magnesite and the Scottish Canadian Magnesite Company shipping crude mineral only. In addition to these, Fitzsimons and Boshart were carrying on development operations. Shipments have been hauled 12 and 14 miles from the quarries to Calumet Station on the C.P.R. During the latter part of 1916, however, the Scottish Canadian Magnesite Company completed a narrow gauge railway from the C.P.R. tracks, Grenville to the mine.

The hydromagnesite deposits occurring in the vicinity of Atlin, B.C., have been exploited during the past two years by Messrs. Armstrong and Morrison of Vancouver, B.C., who shipped 635 tons to Eastern United States and to Great Britain, for testing and experimental purposes.

This occurrence of magnesite was described by Dr. G. A. Young, in the Summary Report of the Geological Survey for 1915, pp. 50-61.

Magnesium Sulphate.

Sulphate of magnesium, epsomite, or epsom salts, has been found in southern British Columbia in the Osoyoos District, from which a few hundred tons have been shipped during 1915 and 1916.

The Provincial Mineralogist of British Columbia makes the following references¹ to this deposit.

"A deposit of magnesium sulphate near Kruger mountain, Osoyoos Division, B.C., occurs in a flat depression known as Spotted lake, which is a partially dried-up lake containing alternate circles of water and dry places. The magnesium sulphate occurs as a layer all over the lake-bottom, covering a considerable area and said to be of exceptional purity; the thickness of the deposit has not been definitely ascertained. Three hundred tons was extracted and shipped to New York in 1915, where a market at a good price was obtained. The material is used in the drug trade. The nearest town to the deposit is Oroville, Washington, U.S.A., which is distant about six miles."

"During the first three months of 1916 the Stewart-Calvert Company, of Seattle, Wash., shipped 250 tons of magnesium sulphate from Spotted lake. No accurate survey of the deposits available has been made so far. The company gave up operations owing to the excessive amount of water, and also owing to the difficulty of transportation to the railroad. It has also claims on the American side that are easier of access."

Metallic Magnesium.

The manufacture in Canada of metallic magnesium has been undertaken by the Shawinigan Electro Metals Company, Ltd., at Shawinigan Falls, Que. The metal is made from magnesium chloride salts which have been imported. It is proposed, however, to undertake the manufacture of these salts in Canada from Canadian magnesite.

¹Annual Report, Minister of Mines, B.C., 1916-pp. 27 and 260.

MANGANESE.

The exports of manganese ore in 1916 are reported as 957 tons, valued at \$89,544 and in the absence of complete returns from operators this figure may be taken to represent production.

Shipments include some bog manganese from Adamsville on the Intercolonial railway, Kent county, New Brunswick, as well as high grade ore from New Ross, Nova Scotia and a few tons from Cape Breton.

*Exports.

The manganese ores which have been mined in Canada are pyrolusite, manganite, psilomelane, and bog manganese. These were mostly ores with a high manganese content, and fairly free from deleterious constituents. The largest part of the production was consequently put to those uses, where a high grade raw material is desired, e.g., as an oxidizing agent in the manufacture of chlorine, bromine, manganates, and permanganates, as a decolorizer of glass, porcelain, and enamels, as a colouring material in dyeing and pottery and paint manufacture, as a drier in paints and varnishes, in the manufacture of dry and Leclanche cells, etc.

The mining of manganese ores in Canada reached considerable proportions between 1880 and 1890 when the annual production ranged from 1,200 to 1,800 tons, valued at from \$30,000 to \$50,000. In 1891 the production fell away, and only once since (in 1899) did it exceed 500 tons. In 1907, 1908, 1909, and 1910, there was no production. In 1910 the Nova Scotia Manganese Company started operations on a property at New Ross, Lunenburg county, N.S., and made small shipments in 1911, 1912, and 1914.

The property was taken over in September, 1915, by the Metals Development Company, Ltd., of 80 Granville St., Halifax, and since

October of 1916 has been operated by the Rossville Manganese Co., Ltd., at the same address. The ore is reported to be a mixture of psilomelane and manganite. The operators are equipped to crush and screen the ore to any size desired. According to the Provincial Mines Report production during the fiscal year ending September 1916 was 544·3 long tons of high grade manganese ore. The ore is hauled 26 miles to Chester Basin and thence by rail to Yarmouth, and then by water to New York.

At the property of the New Ross Manganese Company, situated about two miles south of the above, about 18 tons of manganese ore were recovered in working over the old dumps. The mine, however, was not operated, and has been shut down since 1903.

In the same district operations were begun in December on another property by the International Manganese and Chemical Co., of Boston. A mining camp and equipment were installed and a shaft sunk, but no ore shipped.

W. N. McDonald of Sydney, C.B., did some further work on the "Glenmore" and "Isabella" manganese properties at Enon, near Loch Lomond, Cape Breton county.

Some shipments were made of bog manganese from deposits in the vicinity of Adamsville Station on the Intercolonial railway, Kent county, New Brunswick, on which operations had been begun during the previous year by The New Brunswick and Nova Scotia Mining & Development Co. of New York. All work, however, appears to have been discontinued early in the year.

(a) 250 tons from Cornwallis should more correctly be classed under the heading of mineral pigments.

No separate record of imports of manganese ores is kept in the classification of the Customs Department, but statistics for imports of "oxide of manganese" are listed. In 1916 these imports were 1,170 tons, valued at \$63,786, or an average of \$54.52 per ton, as compared with 1,238 tons, valued at \$46,678, or an average of \$37.70 per ton in 1915, and 1,702 tons,

valued at \$42,287, or an average of \$24.85 per ton in 1914. Imports of ferrosilicon, spiegeleisen, and ferro-manganese for 1916 were 14,777 tons, valued at \$1,879,508; 13,758 tons, valued at \$807,312 in 1915; and 22,147 tons valued at \$549,485 in 1914.

Statistics of imports of oxide of manganese follow:-

Imports	of	Oxide	of	Manganese.
----------------	----	-------	----	------------

By far the greater part of the world's production of manganese enters the market as spiegeleisen, and ferro-manganese. These are used principally in the steel industry where they are added to both Bessemer and open-hearth steels, the manganese acting as a deoxidizer, recarbonizer, and neutralizer of sulphur.

Before the war over 50 per cent of the world's production of manganese ore had been coming from Russian territory in the vicinity of the Black Sea, and a large share from British India. During the past three years, however, these sources of supply have been largely supplemented in the United States market by imports from Brazil. The demand for manganese ore and for ferro-manganese has been such as to result in much higher prices for both the ore and the ferro-alloy than those ruling before the war.

The manganese ore market is discussed in a recent issue of the Engineering and Mining Journal, from which the following extract¹ is taken:

"The price schedules have been altered continuously, and high grade ore running 49% and over, which was quoted around 40 cents in the early part of the war, is now offered at \$1.10 per unit f.o.b. buyers' works. Formerly, ore under 38% could hardly be sold—now buyers are prepared to take material from 33% upward. Again, ore containing over 8% of silica was subject to a penalty, and the maximum silica allowed, before the ore was rejected, was 12%. Today some of the buyers are ready to accept manganese ore, even if it contains up to 20% of silica. Excess

¹The Manganese Ore Market, Engineering & Mining Journal, Aug. 4, 1917, p. 203.

of silica over 8%, however, is penalized at the rate of 50 cents per ton for each unit of silica.

"The United States Steel Corporation is still accepting manganese ore with a penalty of only 15 cents for the excess of silica over 8%. Other buyers deduct 1% of manganese for each 1% of silica in excess of 10. Phosphorus, also, is penalized, and a penalty of 15 cents a ton for each point over 0.1% is charged. The maximum allowance for phosphorus is 0.2%. Though these limits have been set, it is possible by actual negotiations to get an otherwise unacceptable ore taken by the buyers, and it is best for the mine to ship a trial car or cargo, since according to the general and physical character of the ore, a price can often be fixed which is in excess of the actual schedules submitted."

The imports of manganese ore into the United States during 1916 were 552,003 short tons, as against 313,985 tons in 1915, and 283,294 tons in 1914.

MICA.

According to returns received from producers, shipments of mica in 1916 totalled 1,208 tons, valued at \$255,239, or an average of \$211.29 per ton, as compared with shipments in 1915 of 417 tons valued at \$91,905, or an average of \$220.40 per ton. By provinces, the production was: Quebec 844 tons, valued at \$192,343, or an average of \$227.89 per ton, and Ontario 364 tons, valued at \$62,896, or an average of \$172.79 per ton.

The statistics as to value of production should be considered with discretion and with due regard to the conditions under which the industry is conducted. The condition in which mica is shipped from the mines varies greatly; one operator ships his output cleaned and trimmed, while the output of another is in a rough cobbed state, with consequent noteworthy differences in prices realized. And further, companies operating trimming shops as well as mines may place only a nominal value on shipments from mines to trimming shops.

Tables showing the total value and the production by provinces from 1909 to 1916 and the total value of the annual production from 1886 to 1908 follow:—

Calendar Year.	Value.	Calendar Year.	Value.	Calendar Year.	Value.
1886. 1887. 1888. 1889. 1890. 1891. 1892. 1893.	\$ 29,008 29,816 30,207 28,718 68,074 71,510 104,745 75,719	1894 1895 1896 1897 1898 1899 1900 1901	\$ 45,581 65,000 60,000 76,000 118,375 163,000 166,000 160,000	1902 1903 1904 1905 1906 1907 1908	\$135,904 177,857 160,777 178,235 303,913 312,599 139,871

Most of the various minerals of the mica group have been found in Canada. Lepidolite occurrences have been noted in British Columbia, Nova Scotia and Quebec; biotite occurrences in Ontario and Quebec;

muscovite occurrences in British Columbia, Manitoba, Nova Scotia, Ontario and Quebec; and phlogopite occurrences in Baffinland, Ontario, and Quebec. Only the phlogopite (or amber mica) occurrences of Ontario and Quebec have been proven to be of economic interest. These have been the subject of special investigation by the Mines Branch, Ottawa.¹ The muscovite occurrences at Tete Jaune Cache, and Big Bend in British Columbia have also been specially investigated by the Mines Branch,² but as yet they have made no production.

Canada's production of mica has come exclusively from two fields: one, in the Province of Quebec, a short distance to the north of the city of Ottawa, and the other embracing parts of the counties of Lanark, Leeds, and Frontenac, in the Province of Ontario. The city of Ottawa (and the adjacent city of Hull) lying between these two fields is the centre to which almost all the production of the various mines and numerous small prospects is shipped for trimming, grading and marketing. In preparation for the market a considerable proportion of the tonnage received is cobbed out and the mica split, trimmed and otherwise manufactured, with the result that the exports, though of smaller tonnage than the shipments from the mines, usually exceed them in total value.

According to Customs records the exports of mica in 1916 were 654 tons, valued at \$379,720 of which 119 tons, valued at \$81,913 were exported to Great Britain; 533 tons, valued at \$296,221 to the United States; and 2 tons, valued at \$1,586 to other countries. In 1915, the total exports were 440 tons, valued at \$236,124, of which 67 tons, valued at \$34,065 were exported to Great Britain; 372 tons, valued at \$201,659 to the United States; and 1 ton, valued at \$400 to other countries.

Tables showing the annual exports and the distribution of the exports by countries during recent years follow:—

MINERAL PIGMENTS.

Iron Oxides-Ochres.

For many years there has been an annual production in the Province of Quebec of iron oxides from deposits situated between Champlain and Three Rivers, a short distance from the St. Lawrence river.

These oxides are marketed after calcining as paint materials and are also sold crude for use in the purification of illuminating gas. The mineral paint is calcined, washed, and fine ground before shipment.

The total production in 1916 was 8,811 tons, valued at \$58,711 as compared with 6,248 tons, valued at \$48,353 in 1915, and 5,890 tons, valued at \$51,725 in 1914.

Statistics of production since 1886 are shown in the following table:-

Annual Production of Iron Oxides.

Calendar Year.	Tons.	Value.	Calendar Year.	Tons.	Value.
1886 1887 1888 1889 1890 1890 1891 1892 1893 1894 1895	350 485 397 794 275 900 390 1,070 611 1,339	\$ 2,350 3,733 7,900 15,280 5,125 17,750 5,800 17,710 8,690 14,600	1902. 1903. 1904. 1905. 1906. 1907. 1908. 1909. 1910. 1911.	4,955 6,266 3,925 5,105 6,758 5,828 4,746 3,940 4,813 3,622	\$30,495 32,760 24,995 34,675 36,125 35,570 30,440 28,093 35,185 28,333

There is included in the above table a small production from an ochre deposit at Campbellville, Halton county, Ont., which has been inactive since 1911.

The active operators in the iron oxide industry in 1916 were the following:—

The Canada Paint Company, Limited, Montreal, Que.

The Champlain Oxide Company, Three Rivers, Que.

Thos. H. Argall, Three Rivers, Que.

In previous years production was reported by:-

Francois Ouellette, St. Joseph de Nicolet, Que.

Ontario Mineral Paint Company, Campbellville, Ont.

The exports of mineral pigments, iron oxides, ochres, etc., in 1916 are reported as 1,696 tons, valued at \$25,312, as compared with exports in

1915 of 1,196 tons, valued at \$17,263. Statistics of annual exports since 1897 follow:—

Exports of Mineral Pigments, Iron Oxides and Ochres.

Calendar Year.	Tons.	Value.	Calendar Year.	Tons.	Value.
1897 1898 1899 1900 1901 1902 1903 1903 1904 1905	512 283 308 651 401 352 676 416 353	\$ 7,706 4,227 5,408 7,154 8,233 6,182 12,770 7,260 7,704	1907 1908 1909 1910 1911 1911 1913 1914 1915	191 125 658 1,746 2,000 3,016 1,956 1,777 1,196	\$10,043 4,850 7,956 29,839 27,070 34,513 18,931 22,311 17,263 25,312

Imports of mineral pigments are included under two classifications (1) ochres and ochrey earths, siennas and umbers, duty 20 per cent, and (2) oxides rough stuffs, fillers, fireproofs and colours, dry, n.e.s., duty 25 per cent.

During 1916, imports under the first classification were 2,082 tons, valued at \$51,771 and under the second 2,917 tons, valued at \$357,487 or total of 4,999 tons, valued at \$409,258. In 1915, imports under the first classification were 1,240 tons, valued at \$23,763, and under the second, 2,452 tons, valued at \$260,986, or total of 3,692 tons, valued at \$284,749.

Statistics of imports appear in the following tables:—

Imports of Ochres and Pigments, 1915 and 1916.

MINERAL WATER.

The statistics of production given herewith represent, as usual, as closely as can be secured, the value of mineral water shipped from mineral springs in bottles, barrels, or other containers, and do not include any estimate of the value of mineral water used at springs for drinking or bathing purposes; nor are the natural pure spring waters included, of which a considerable quantity is sold in bottled form.

The value of the production in 1916 was \$127,806 as compared with \$115,274 in 1915; \$134,111 in 1914, and \$173,677 in 1913.

The imports of mineral and ærated waters during the calendar year 1916 were valued at \$130,933; during 1915 at \$126,569; during 1914 at \$199,327 and during 1913, \$257,153.

The exports of mineral water during 1916 were valued at \$1,598; as compared with \$3,578 in 1915 and \$2,367 in 1914.

Statistics of production, imports and exports, are given in the following tables:—

Annual Production of Mineral Water.

NATURAL GAS.

The total production of natural gas in Canada in 1916 was 25,467,458 thousand cubic feet, valued at \$3,958,029, to which Ontario contributed 17,953,109 thousand cubic feet, valued at \$2,765,105; Alberta 6,904,231 thousand cubic feet, valued at \$1,113,296, and New Brunswick 610,118 thousand cubic feet, valued at \$79,628.

The total production in 1915 was 20,124,162 thousand cubic feet, valued at \$3,706,035, to which Ontario contributed 15,211,523 thousand cubic feet valued at \$2,622,838 (as reported to the Ontario Bureau of Mines; direct returns by operators to the Mines Branch were not complete); Alberta 4,481,947 thousand cubic feet, valued at \$1,022,814; and New Brunswick, 430,692 thousand cubic feet, valued at \$60.383.

The value of the gas, as reported by producers, varies from 5 cents to 30 cents per thousand feet, but these prices do not represent what the customer has to pay. In some cases the producer also owns the distribution pipe line and receives the full price paid by the consumer. In other cases the producer may sell to a pipe line company who either sells directly to consumers, or may in turn resell to other pipe line companies for retail distribution; in such cases as these the producer receives only a fraction of the amount paid by the consumer, but he is saved the expense of distribution. The statistics given herewith represent, as far as possible, the value received by the producer, or owner, of the gas wells, whether such producer be the owner of the distribution line or not.

The petroleum and natural gas resources of Canada have been the subject of special investigation by the Mines Branch, Ottawa, and two volumes comprising the results of this investigation have recently been issued.1

Statistics of the production of natural gas in 1914, 1915 and 1916, and of the value of the annual production since 1892 follow:—

PEAT.

The total shipments of peat during 1916 were 300 tons, valued at \$1,500, all from a bog in Middlesex county, Ontario, operated by The Dorchester Peat Fuel Co., Ltd.

In 1915 shipments were made from the Alfred bog, Prescott county, amounting to 300 tons, valued at \$1,050.

Statistics of the annual production of peat since 1900 are given in the following table:—

Annual Production of Peat.

Calendar Year.	Tons.	Value.	Calendar Year.	Tons.	Value.

Following is a list of publications on peat issued by the Mines Branch, Ottawa.

Report No. 19. "Peat and Lignite, their Manufacture and Uses in Europe," by Erick Nystrom, M.E. 1908 (Out of print).

Report No. 30. "Investigation of the Peat Bogs and Peat Fuel Industry of Canada, 1908." Bulletin No. 1, by Erick Nystrom and A. Anrep.

Report No. 71. Investigation of the peat bogs, and peat industry of Canada, 1909-10; to which is appended Mr. Alf. Larson's paper on Dr. M. Ekenberg's wet-carbonizing process: from Teknisk Tidskrift, No. 12, December 26, 1908—translation by Mr. A. Anrep.; also a translation of Lieut. Ekelund's pamphlet entitled "A solution of the peat problem," 1909, describing the Ekelund process for the manufacture of peat powder, by Harold A. Leverin, Ch. E. Bulletin No. 4—by A. Anrep. (Second edition, enlarged.) (Out of print.)

Report No. 90. Reprint of Presidential Address delivered before the American Peat Society at Ottawa, July 25, 1910, by Eugene Haanel, Ph.D.

Report No. 151. Investigation of the Peat Bogs and the Peat Industry of Canada, 1910-1911. Bulletin No. 8, by A. Anrep.

Report No. 154. The Utilization of Peat Fuel for the Production of Power, being a record of experiments conducted at the Fuel Testing Station, Ottawa, 1910-1911. Report on—by B. F. Haanel, B.Sc.

Report No. 266. Investigation of the Peat Bogs and the Peat Industry, 1911-1912. Bulletin No. 9, by A. Anrep, Peat Expert.

Report No. 299. Peat, Lignite and Coal. Their value as Fuels for the Production of Gas and Power in the By-Product Recovery Producer. Report by B. F. Haanel, B.Sc.

Report No. 351. "Investigation of the peat bogs and the peat industry of Canada, 1913-1914." Bulletin No. 11. A. Anrep.

Report No. 447 "The value of Peat Fuel for the Generation of Steam." Bulletin No. 17, by John Blizzard, B. Sc.

PETROLEUM.

The petroleum situation in Canada is worthy of a brief introductory summary. The production in 1916 of crude petroleum was 6,934,288 imperial gallons, whereas the imports of crude and refined oils amounted to 292,426,121 gallons and the exports in comparison were quite small. There was thus an oil consumption of almost 300,000,000 gallons of which less than $2\frac{1}{2}$ per cent was from Canadian oil fields.

About 85 per cent of the total imports is in the form of crude oil of which a little over one-half is imported for the use of Canadian oil refineries.

A complete record of the production of oil refineries has not been obtained, but sufficient information has been obtained to indicate that probably at least 70 per cent of the Canadian consumption of refined illuminating oils, lubricating oils, gasoline, etc., is now produced in Canadian refineries.

The production of crude petroleum in 1916 was 198,123 barrels (of 35 Imperial gallons) valued at \$392,284, as compared with a production in 1915 of 215,464 barrels, valued at \$300,572; in 1914 of 214,805 barrels, valued at \$343,124 and in 1913 of 228,080 barrels, valued at \$406,439. The average price per barrel realized in recent years has been as follows: \$1.98 in 1916; \$1.395 in 1915; \$1.597 in 1914; and \$1.782 in 1913

The production of crude petroleum has come almost solely from Ontario. New Brunswick has been a producer for about nine years to the extent of less than 3,000 barrels, annually. There has been a small production in Alberta during each of the past three years, but the record is not complete.

The New Brunswick production has been as follows: 95 barrels in 1909; 1,485 barrels in 1910; 2,461 barrels in 1911; 2,679 barrels in 1912; 2,111 barrels in 1913; 1,725 barrels in 1914; 1,020 barrels in 1915, and 1,345 barrels in 1916. The 1916 production in Ontario was 196,778 barrels, valued at \$389,621 as against a production in 1915 of 214,444 barrels valued at \$299,149.

In Ontario, although a slight increase in value is shown in 1916, the production of crude oil has been steadily, but surely declining in spite of attempts being made by drilling to enlarge the areas of producing fields, or to find new ones. In the newer producing fields, as Dutton, Onondaga, and Tilbury, the decline has been relatively more rapid than in the older fields of Lambton and Bothwell.

During 1916 some drilling has been undertaken in the township of Brooke, Lambton district, and also at Thamesville in the Bothwell section.

New Brunswick petroleum production has been confined to Albert county where at present The New Brunswick Gas and Oil-Fields, Limited, are the only operators. The properties of this Company, formerly the Maritime Oil-Fields, Limited, having developed a very considerable flow of gas, the operators have been concentrating their energies on gas development. New Brunswick possesses large deposits of bituminous shales richer in oil than the Scottish shales which have been exploited for many years at a profit.

Of the many wells drilled in Alberta during the past four years, there are said to be nine in which oil has been found. Two companies have undertaken refining operations on a limited scale, viz.: The Calgary Petroleum Products, Ltd., with wells and refinery situated on Sec. 6, Tp. 20, R. 2, West of the 5th Mer.; and the Southern Alberta Oil Company, Ltd., on Sec. 18 of the same tp. These operations are still in the development stage with wells being deepened to seek a greater supply of oil.

The Calgary Petroleum Products, Ltd., had recovered, to the end of 1916, about 41,000 gallons of crude oil which is of paraffin base and from 52° to 62° Baume gravity. Gasoline and other high grade distillates are obtained by natural distillation under pressure in oil traps. The two wells of this Company have a capacity of about 4,500,000 cubic feet of gas per day. This is a "wet gas" capable of giving up casing head gasoline under treatment. In experimental work from $\frac{1}{2}$ to 1 gallon of gasoline per 1,000 cubic feet has been recovered and preparations are being made for the installation of a commercial plant.

During the twelve months ending March 31, 1917, 45,162 gallons of refined petroleum and naphtha were shipped from these two Alberta refineries, according to inspection returns.

The statistics of production of petroleum during recent years are compiled from the records of the Department of Trade and Commerce as being the most accurate basis available. These figures are secured in connexion with the payment of a bounty of $1\frac{1}{2}$ cents per gallon by the Dominion Government on all crude oil produced from wells, or oil shales, in Canada, the claim for bounties having to be substantiated as to quantity by the certificate of the receiving stations, tank companies, refiners, or other purchasers, as well as by the supervising officers on bounties.

Statistics of production of crude oil from 1881, in barrels of 35 gallons each, with the total value, and average price per barrel, are given in the following table:—

Annual Production of Crude Petroleum.

Year.	Barrels of 35 gallons.	Value.	Average.	Year.	Barrels of 35 gallons.	Value.	Average
1881	368,987 389,573 472,866 571,000 587,563 584,061 713,728 695,203 704,690 795,030 755,298 779,753 798,406 829,104 726,138 726,632 709,857 758,391	\$ 525,655 556,708 713,695 653,600 902,734 1,010,211 984,438 874,255 835,322 1,086,738 1,155,647 1,011,546 1,061,747		1899 1900 1901 1902 1903 1904 1905 1906 1907 1907 1908 1910 1911 1912 1913 1914 1915 1916	808,570 710,498 622,392 530,624 486,637 503,474 634,095 569,753 788,872 527,987 420,755 291,092 243,336 228,080 214,805 215,464 198,123	\$1,202,020 1,151,007 1,008,275 951,190 1,048,874 935,895 856,028 761,760 1,057,088 747,102 559,604 388,550 357,073 345,050 406,439 343,124 300,572 392,284	\$ 1.48\frac{3}{2}\$ 1.620 1.620 1.792 2.155 1.858 1.350 1.337 1.340 1.415 1.230 1.225 1.418 1.782 1.597 1.395 1.98

The following table gives statistics of the bounties paid to date by the Dominion Government on production of crude oil in Canada, from wells or oil shales, the bounty being $1\frac{1}{2}$ cents per gallon.

The production of crude oil in the Province of Ontario, by districts since 1916, is shown in the following tables. The record has been furnished by the Supervisor of Petroleum Bounties at Petrolia and agrees very closely, although not identically, with the statistics of the Department of Trade and Commerce used in compiling the record of production for the whole of Canada.

In the above record the District of Thamesville is credited with a small production in the years 1906 and 1907. Subsequent production in this district has been included with that of Bothwell. Recent drilling operations have, in this district, been undertaken by the Vacuum Gas and Oil Company who report that from the end of October to the end of December about 2,250 barrels of oil were shipped.

Inspection of Petroleum.

During 1916, there were nine oil refineries in Canada; one each at Sarnia, Ont., Regina, Sask., and Ioco, B.C., owned by the Imperial Oil Company of Sarnia; one at Petrolia, Ontario, owned by the Canadian Oil Companies, Ltd., Toronto; one at Wallaceburg, owned by the Empire Refining Company; one at Petrolia, owned by the Canadian Oil Producing and Refining Company; one at Toronto, owned by the British American Oil Company, Ltd.; two south of Calgary, Alberta, operated by The Calgary Petroleum Products, Ltd., and the Southern Alberta Oil Co., Ltd.

In addition to the above, new refineries are being built at Dartmouth, N.S., and Montreal, Que., by the Imperial Oil Company, and one near Vancouver by the Shell Company of California. These refineries with the exception of those in Alberta are using large quantities of imported

crude oil.

All refined illuminating oils and naphtha manufactured and shipped from Canadian refineries are inspected by the Department of Inland Revenue. The total quantity inspected for the fiscal year ending March 31, 1917, was 76,818,608 · 29 gallons as compared with 64,014,398 · 79 gallons during the fiscal year 1916, and 46,382,785 · 09 gallons during the fiscal year 1915.

The following tables, showing the quantities of refined illuminating oils and naphtha inspected in the several districts, are quoted from the

annual report of the Department of Inland Revenue.

Return of Inspected Petroleum and Naphtha Shipped from Refineries During the Fiscal Year Ending March 31, 1916.

^{*}All from Ontario Refineries.

Exports of Petroleum.

The exports of crude oil from Canada are comparatively small, the available statistics being shown in the next table following. During 1916 the exports as published by the Customs Department included: oil, mineral, coal and kerosene, crude, 137,647 gallons valued at \$11,439, and refined, 446,595 gallons valued at \$48,137; gasoline and naphtha 54,806 gallons, valued at \$14,194. There was also an export of "other oils n.e.s." amounting to 3,391,857 gallons, valued at \$1,038,025 which possibly included products of petroleum.

In 1915 the exports included: crude oil 35,977 gallons, valued at \$1,789, refined oils 103,488 gallons, valued at \$14,107, naphtha and gasoline 16,644 gallons, valued at \$4,540, or a total of 156,109 gallons, valued at \$20,436. There was also an export of 1,247,376 gallons, valued at \$290,943, of "other oils n.e.s.," which probably included products of petroleum.

^{*}Includes naphtha and gasoline.

The total value of the imports of petroleum and petroleum products in 1916 was \$14,705,323, as against a value of \$8,047,781 in 1915.

The total imports of petroleum oils, crude and refined in 1916 were 292,426,121 gallons, valued at \$14,604,476. These oil imports included: crude fuel and gas oils 253,093,270 gallons, valued at \$8,469,822; coal and kerosene and illuminating oils 8,080,107 gallons, valued at \$542,893; lubricating oils 5,466,076 gallons, valued at \$973,253; gasoline 18,321,891 gallons, valued at \$3,624,931; and other oils, products of petroleum 7,464,777 gallons, valued at \$1,003,577.

The total imports of petroleum oils, crude and refined, in 1915 were 236,923,765 gals., valued at \$7,979,264. The oil imports included, crude oil 192,588,487 gals., valued at \$3,678,021, refined and illuminating oils, 6,792,873 gals., valued at \$405,019; gasoline 28,030,972 gals., valued at \$2,693,717, lubricating oils 4,547,179 gals., valued at \$755,535, and other oils, products of petroleum 4,954,254 gals., valued at \$446,972.

The imports of petroleum products in 1916 included 1,281,376 pounds of paraffin and paraffin wax candles, valued at \$100,847, as compared with imports in 1915 of 980,662 pounds, valued at \$68,517.

Details of imports of petroleum and petroleum products during the calendar years 1915 and 1916 are given in the following table:—

Imports of Petroleum and Petroleum Products During the Calendar Years 1915 and 1916.

⁽a) Subdivided on Feb. 16, 1916, into two parts:-

^{1.} Crude petroleum in its natural state, ·7900 specific gravity or heavier at 60 degrees temperature, when imported by oil refineries to be refined in their own factories.

^{2.} Petroleum, (not including crude petroleum imported to be refined, or illuminating or lubricating oils) *8235 specific gravity or heavier at 60 degrees temperature.

The total annual imports of petroleum and petroleum products are shown in the three tables following. The first table gives imports of petroleum, crude and refined; the second imports of paraffin wax; and the third imports of paraffin wax candles.

PHOSPHATE.

The small production of phosphate or apatite, which has been obtained in Canada since 1896, has been produced almost altogether as a by-product in connexion with the mining of mica. Shipments during 1916 totalled 203 tons, valued at \$2,514, as compared with 217 tons, valued at \$2,502 in 1915, and 954 tons, valued at \$7,275 in 1914.

Phosphate is used at Buckingham, Que., in the manufacture of fertilizers, phosphorus, and ferro-phosphorus, and the main supply is now imported from Florida.

For a number of years previous to 1892, there was a considerable production of apatite from the district north of Buckingham, the annual output varying from 20,000 tons to 30,000 tons. The introduction of the cheaply-mined phosphates of the southern States, however, resulted in the collapse of the Canadian industry, though it was claimed at the time of closing down that there was no diminution in the available supply of mineral.

Thin beds of phosphate rock have been found¹ in western Alberta, at Banff in the Rocky mountains, which in character closely resembles the phosphate beds of Montana to the south. Owing to the thinness of the beds, seldom over 12 inches in thickness, and the low grade character of the rock, 20 to 27 per cent phosphoric acid, the Banff deposits do not appear to be considered of present economic importance.

Statistics of production and exports are shown in tables following:—

Exports of phosphate in 1916 are reported by the Department of Customs as 103 tons, valued at \$1,543, and in 1915 as 179 tons, valued at \$1,860.

Discovery of Phosphate of Lime in the Rocky Mountains, by F. D. Adams, and W. J. Dick, Conservation

Commission, Ottawa, 1915.
Commission, Ottawa, 1915.
Livestigation of a reported discovery of Phosphate in Alberta, by Hugh S. deSchmid, Mines Branch, Department of Mines, Ottawa, 1916.
Transactions Canadian Mining Institute, Vol. XIX, 1916, pages 321-348.

The imports of phosphate rock (fertilizer) during 1916 were valued at \$16,182; acid phosphate (not medicinal), 2,751,941 pounds, valued at \$146,910; and phosphorus 95,543 pounds, valued at \$42,738.

The imports of phosphate rock (fertilizer) for 1915 were valued at \$14,148; acid phosphate (not medicinal), 1,964,131 pounds, valued at \$105,035, and phosphorus 75,900 pounds, valued at \$29,572.

Phosphorus is manufactured at Buckingham by the Electric Reduction Company.

PYRITES.

The total shipments of pyrites ores in 1916 were 309,251 tons, valued at \$1,084,095, and included 130,639 tons valued at \$523,272 from Quebec, 177,552 tons valued at \$555,523 from Ontario, and a small tonnage from British Columbia.

The total shipments in 1915 were 286,038 tons, valued at \$985,190, and included 142,735 tons, valued at \$570,940 from Quebec, and 143,303 tons, valued at \$414,250 from Ontario mines.

In the Province of Quebec, shipments were made from the Eustis mine, Eustis; the Weedon mine and the Stratford mine in Stratford township. The pyrites ores of the Eastern Townships of Quebec are cupriferous, the copper content of the shipping ores averaging about 2.75 per cent; they also carry small quantities of gold and silver.

The shipping mines in Ontario were those at Sulphide and Queensboro in Hastings county; the Caldwell property in Lanark county; the Helen and Goudreau properties in Algoma district, and the Northpines mine, Vermillion lake, Kenora district.

In British Columbia shipments were made from the Sullivan mine at Kimberley to Trail, where a sulphuric acid plant has been installed by the Consolidated Mining & Smelting Co. Ltd.

The exports of pyrites from Canada in 1916, as reported by the Customs Department were 156,722 tons, valued at \$557,024, as compared with 137,598 tons valued at \$527,318 exported in 1915, and 89,999 tons valued at \$377,985 exported in 1914. Direct returns from operators, however, appear to indicate larger exports than is shown by this record and it is possible that some of the ore may be exported as "copper ore" and not as pyrites.

The imports of brimstone and crude sulphur during the calendar year 1916, were 73,467 tons valued at \$1,186,618, as against 30,182 tons valued at \$480,317 in 1915, and 41,954 tons valued at \$870,868 in 1914.

The Eustis Mining Company, Eustis, Que.

The Weedon Mining Company, Limited, Weedon, Que.

La Mine de Cuivre et Or, Stratford, Que.

The Nichols Chemical Company of Canada, Limited, Sulphide, Ont., and 25 Broad St., New York.

The Canadian Sulphur Ore Co., Ltd., Queensboro, Ont.

The Northern Pyrites Company, Northpines, Ont., and 25 Broad St., New York.

Algoma Steel Corporation, Limited, Sault Ste. Marie, Ont.

The Madoc Mining Co., Goudreau, Ont., and 25 Broad St., New York.

T. B. Caldwell, Flower Sta., Ont.

The Rand Consolidated Mines, Ltd., Goudreau, Ont., and 853 Ellicott Sq., Buffalo, N.Y.

The Consolidated Mining & Smelting Co. of Canada, Trail, B.C. (Sullivan property at Kimberley, B.C.).

Sulphuric Acid.

Complete statistics of the production of sulphuric acid in Canada have been collected by this Department in 1917, and a record has been obtained covering the annual production during the years 1912 to 1916 inclusive, with production during the first six months of 1917.

The first collection of statistics of production of sulphuric acid in Canada, undertaken by this Division, was for the years 1887, 1888, and 1889, but for some reason the collection of the record was discontinued. The only other records available were those of the Census office for decennial periods.

Sulphuric acid is manufactured in different grades or strengths, the strength being measured according to the percentage of sulphur trioxide (SO₃) or pure sulphuric acid (H₂SO₄) contained. The scale of measurement generally employed in Canada and the United States is that known as the Baumé Hydrometer scale and the principal grades of acid manufactured are generally referred or reduced to the following standards: 50° Baumé acid, also known as Chamber acid, containing an average of 62·18 per cent of H₂SO₄; 60° Baumé acid containing an average of 77·67 per cent H₂SO₄; 66° Baumé acid or oil of vitriol, containing 93·19 per cent H₂SO₄. Acids stronger than 66° Bé. should have their percentage compositions determined by chemical analyses.¹ These stronger acids appear under various names including pyrosulphuric acid, fuming or Nordhausen acid, Oleum, etc.

Production records have been obtained in terms of the standard grades 50° Bé., 60° Bé., 66° Bé., and stronger acids. The quantities of the first two grades have, however, in the following statistics been reduced to their equivalent in 66° Bé. acid.

The total production of sulphuric acid in Canada during the twelve months ending December 31, 1916, derived from 8 operating plants, was 124,920 short tons of acid of 66° Bé. equivalent including a small quantity of stronger acid, as compared with a production in 1915 of 75,838 tons. During the first six months of 1917 the production in terms of 66° Bé. equivalent was 65,258 tons or at the rate of over 130,000 tons per annum. The requirements of the munitions and steel making industries have greatly increased the consumption of sulphuric acid.

The ores used in the manufacture of sulphuric acid in 1916 included 20,566 tons of imported sulphur or brimstone and 62,681 tons of pyrites, most of which was from Canadian mines. Crediting the pyrites ore with 23,192 tons of sulphur, an average of 37 per cent, we may assume that, of the total production of sulphuric acid, 58,712 tons were derived from imported sulphur and 66,208 tons from pyrites ores.

¹ Sulphuric Acid, Manufacturing Chemists Association of the United States.

Annual Production of Sulphuric Acid in Canada, 1912-1916.

Calendar Vear.	Sulphuric acid made, in terms of	Ores used in the	production of acid

1912 1913. 1914 1915. 1916 1917 (1st six months).	Short tons. 44,651 47,227 41,919 75,838 124,920 65,258	Short tons. 4,773 4,281 2,227 4,716 20,566 11,086	Short tons. 27,680 31,774 33,331 55,586 62,681 31,614

¹Record includes a small production of Oleum and other grades, the strength of which is not specified. An approximate estimate of production in terms of 50° acid will be obtained by increasing these figures by 50 per cent.

A portion of the Canadian production has been exported and during 1913, 1914, and 1915 the exports considerably exceeded the imports, whereas in 1916 the imports were in excess. The total exports of sulphuric acid in 1916 were 1,576 tons valued at \$74,527, as against exports in 1915 of 9,635 tons valued at \$243,457. The imports of sulphuric acid during the calendar year 1916 were 2,400 tons valued at \$115,173, as compared with imports in 1915 of 141 tons valued at \$4,872, and imports in 1914 of 166 tons valued at \$7,149.

QUARTZ.

Considerable quantities of quartz are used by the smelters of nickel and of copper ores. It is also used in the manufacture of ferro-silicon, and ground quartz is used for the manufacture of sanitary and enamelled ware.

The total shipments in 1916 are reported as 136,745 tons valued at \$251,226, as compared with shipments of 127,108 tons, valued at \$205,153 in 1915, and shipments of 54,148 tons, valued at \$84,583 in 1914.

There is included with the statistics of quartz a small production of grinding pebbles obtained from near Jackfish, Ontario, on the north shore of Lake Superior, by the Canada Pebble Company, Ltd.

Imports of silex of crystallized quartz in 1916 were 1,677 tons, valued at \$18,297 and the imports of flint were 5,348 tons, valued at \$71,983.

Imports of silex or crystallized quartz in 1915 were 402 tons, valued at \$5,527, and the imports of flint were 4,327 tons, valued at \$48,966.

Statistics of the annual production of quartz, so far as these have been obtained, are shown in the next table:—

Grinding Pebbles.

There has been, as already mentioned, a small annual production of grinding pebbles from near Jackfish, Ontario. These pebbles have been used chiefly in the cement industry.

Another possible source of grinding pebbles has been found in southern Saskatchewan. Mr. N. B. Davis of the Mines Branch who has been investigating the clay resources of this region reports upon the pebble deposits as follows:

"Considerable deposits of rounded quartzite pebbles, suitable for grinding purposes, were found in the southwestern part of the Province."

"The Cypress Hills are capped by a gravel bed varying in thickness up to fifty feet. South of Maple Creek, on the north side of the hills, the slopes are covered with these pebbles, and at the top of the escarpment they are to be found in place. They are particularly well exposed in the road cuttings through the hills near Coulee post office and in the escarpment south of Elkwater lake in Alberta."

"The C.P.R. Weyburn-Stirling line is ballasted for a considerable distance east and west of Gouverneur with quartzite gravel taken from a glacial deposit on 29, 9, 12, 3rd, near that station. This is south of the Cypress Hills and the gravel was probably, in large part, derived from the tops of the hills by glacial ice and streams. This deposit is of particular importance because of its proximity to the railroad."

"The pebbles vary in size from one inch up to six inches in diameter, the greater proportion being about three inches."

"Small sample lots were shipped to two cement plants in Alberta for testing, but to date no information is available. However, there is no doubt of the quality of these pebbles for cement grinding, and for such work they are an important resource to the cement industries of Manitoba, Saskatchewan and Alberta."

¹ Mines Branch, Dept. of Mines, Canada, Summary Report for 1916—p. 122.

SALT.

The production of salt in Canada has been almost altogether obtained from salt fields in southwestern Ontario, although there was at one time a very small production in New Brunswick and Manitoba.

The total sales of salt in 1916 (including the salt equivalent of brine used in the chemical industries) were 132,903 tons, valued at \$717,653, exclusive of packages. The average number of men employed during the year was 262, and the amount of wages paid \$219,595. The value of the packages used during the year was \$309,603, and stock of salt in manufacturers' hands at the close of the year was reported as 1,970 tons. The 1916 production included table and dairy salt 35,045 tons, valued at \$247,456, or an average of \$7.06 per ton; common fine 54,596 tons, valued at \$262,660, or an average of \$4.81 per ton; common coarse 41,259 tons, valued at \$200,479, or an average of \$4.86 per ton, and land salt 2,003 tons, valued at \$7,058, or an average of \$3.52 per ton.

The total sales of salt in 1915 were 119,900 tons, valued at \$600,226, exclusive of packages. The value of the packages used was returned as \$280,747. The average number of men employed during the year was 254, and the amount paid in wages \$186,059. Stocks of salt in manufacturers' hands at the close of the year were reported as 3,613 tons.

Detailed statistics of the production during the past six years, showing the total sales of salt, the value of the sales, exclusive of packages, the value of the packages used, stock in manufacturers' hands at the end of the year, number of men employed, wages paid, and the total annual production since 1886, are given in the following tables.

Detailed Statistics of Salt Production 1911-1916.

	1911.	1912.	1913.	1914.	1915.	1916.

Comparatively small quantities of salt are now exported from Canada, the exports in 1916 being 305,900 pounds, valued at \$2,223 as compared with exports of 889,300 pounds, valued at \$5,836 in 1915, and exports of 952,700 pounds, valued at \$5,229, in 1914.

The imports of salt on the other hand are quite considerable and in total value greatly exceed the domestic production.

During the calendar year 1916 the imports of salt subject to duty included: salt in bulk 34,035 tons, valued at \$111,130, and salt in bags, barrels, or other packages 7,679 tons, valued at \$59,980. Salt imported from the United Kingdom or any British possession, or imported for the use of sea or gulf fisheries, duty free, was imported to the extent of 109,493 tons, valued at \$523,725, giving total imports of 151,207 tons, valued at \$694,835.

During the calendar year 1915 the imports of salt subject to duty included: salt in bulk 27,613 tons, valued at \$84,449, and salt in bags, barrels or other packages 6,867 tons, valued at \$50,997. Salt imported from the United Kingdom or any British possession or imported for the use of sea or gulf fisheries, duty free, was imported to the extent of 103,006 tons, valued at \$382,080, giving total imports of 137,486 tons, valued at \$517,526.

The total consumption of salt, domestic and imported, was in 1916, approximately 283,958 tons valued at \$1,410,265, as compared with a consumption in 1915 of 256,942 tons valued at \$1,111,916, and a consumption in 1914 of 249,208 tons, valued at \$1,029,300.

The statistics of exports of salt since 1880, are shown in tables following:—

TALC.

The production of talc in the Province of Ontario, was supplemented in 1916 by a small shipment from a British Columbia deposit northeast of Vancouver.

The total shipments by mine operators during the year were 13,104 tons, valued at \$49,423, as compared with shipments in 1915 of 11,885 tons, valued at \$40,554, and 10,808 tons, valued at \$40,418 in 1914:

The operators were:—

Messrs. Cross & Wellington, Madoc, operating the Henderson mine on lot 14, concession XIV, Huntingdon township, Hastings Co., Ont.

Anglo-American Talc Corporation, Ltd., Madoc, operating the Connolly mine on W. half of lot 15, concession XIV, Huntingdon township, Hastings Co., Ont.

Eldorite Limited, Eldorado, operating a mine and small mill near Eldorado, N.W. lot 20, concession V, Madoc township, Hastings Co., Ont.

W. J. Dickinson, operating a deposit at D'Arcy Station on the Pacific Great Eastern Railway, 60 miles from Squamish, B.C.

The Henderson mine has been operated for some years, the greater part of the output being sold to Geo. H. Gillespie & Co., who operate a grinding mill at Madoc, the balance being exported to the United States.

In 1916, 1,755 tons were shipped crude to the United States, the balance being sent to Canadian grinding mills. In 1915, 1,720 tons, in 1914, 1,269 tons, and in 1913, 2,750 tons were shipped crude to the United States. The crude talc is valued at from \$2.50 to \$3.00 per ton at the mine, and the ground or refined talc during 1916 at an average of about \$14.00 per ton.

Imports of talc are not now separately recorded by the Customs Department, but the imports in 1915 were 154 tons, valued at \$1,866, as against imports in 1914 of 584 tons, valued at \$8,983 and imports in 1913 of 402 tons, valued at \$10,706.

STRUCTURAL MATERIALS AND CLAY PRODUCTS.

INTRODUCTORY.

The subjects included under this heading comprise, in the order treated: cement, clay products of various kinds, such as brick, sewerpipe and tile, pottery, etc., lime, sand-lime brick, sand and gravel, slate, and stone for building and other purposes, including granite, marble, limestone, sandstone, etc. Previous to 1912 no attempt was made to collect a record of the production of sands and gravels in Canada, and the only statistics available were those of exports and imports. In 1912, however, a beginning was made in the collection of these statistics; but owing to the incompleteness of the available lists of producers and the failure of many to answer correspondence, only a very partial record was obtained. In 1913 the scope of the collection was extended to cover sands and gravels used by railways for ballasting, etc. The statistics of stone production do not include the stone used in making cement or lime, but are as complete as possible for all other established stone quarries; nevertheless there is undoubtedly a large production of stone for foundation work, road-making, and railway construction, of which no record is available.

The total value of the production of structural products in 1916 was \$17,467,186, as compared with \$17,920,759 in 1915, and \$26,009,227 in 1914, the decrease in 1916 being \$453,573, or $2 \cdot 5$ per cent, as compared with the previous year.

The total value of the imports of the same class of products in 1916 was \$5,562,220, as against \$3,912,946 in 1915, and \$6,528,838 in 1914.

The total exports were valued at \$681,239 in 1916, as against \$519,676 in 1915, and \$941,661 in 1914.

The apparent total consumption of these structural products based upon the record of production, imports and exports, was in 1916 valued at \$22,348,167, as compared with \$21,314,029 in 1915; and \$31,596,404 in 1914, the increase in consumption in 1916 being \$1,034,138, or 4.9 per cent, while compared with \$39,916,642 in 1913—the year of maximum consumption—the falling off was \$17,568,475 or about 44 per cent.

A summary of the production, imports, exports, and consumption of structural materials and clay products in 1916 and in 1915, and the annual production from 1910 to 1914 are shown in tables herewith:—

(a) Exports only.

The statistical situation with respect to the production of cement, clay and stone quarry products is closely reflected in the following annual records of building operations covering the same period. These figures as published in the "Labour Gazette" show a gradual increase in value of building permits reaching maximum in 1912, and since then showing rapid decreases until 1916 when a slight increase occurred. This same authority in its issue of March 1916 clearly indicated the strong demand for structural material during the five years immediately preceding 1913, more noticeable throughout the west. This section was also the first to feel the setback.

For the year 1916, the total value of building permits in selected localities was \$39,740,692, as compared with \$33,566,749 in the previous year showing an increase of \$6,173,943, or 18.4 per cent. Of the totals, eastern Canada contributed \$32,160,844 or 81 per cent in 1916, and \$28,748,103

or about 86 per cent in 1915. The figures for eastern Canada in 1916 also show a decrease of over 63 per cent as compared with 1913, while a decrease of over 93 per cent is shown in western Canada when compared with 1912.

CEMENT.

The total quantity of cement made in 1916, according to returns received from the manufacturers, was 4,753,033 barrels of 350 pounds net each (831,781 tons), as compared with 5,153,763 barrels (901,909 tons), made in 1915, a decrease of 400,730 barrels (70,128 tons), or nearly 7.8 per cent.

The total quantity of Canadian portland cement sold in 1916 was 5,369,560 barrels (939,671 tons), as compared with 5,681,032 barrels (994,181 tons), made in 1915, a decrease of 311,472 barrels (54,508 tons), or 5.5 per cent.

The total consumption of cement in 1916, including Canadian and imported cement was 5,390,156 barrels, of 350 pounds each (943,252 tons), as compared with 5,709,222 barrels (999,114 tons), in 1915, a decrease of 319,066 barrels (55,837 tons), or $5 \cdot 6$ per cent.

The production of cement in Canada during the past few years, though all classed as portland, has included an output of puzzolan cement, made from blast furnace slag at Sydney, N.S., and a small production of "natural portland," made at Babcock, Manitoba. The slag cement plant at Sydney has, however, been idle during the past two years.

The average number of men employed in Canadian cement plants during 1916 was 1,695, and the total wages paid \$1,307,224. In 1915 the average number of men employed was 1,686, and wages paid \$1,184,459.

Statistics of the total annual sales of natural rock and portland cement since 1887, are shown in the following table:—

*Quantities sold or used.

The production of cement in 1916 was derived from 15 plants. Four-teen other plants were idle throughout the year, one of these making shipments from stocks. The total daily capacity of the 29 completed plants is 53,415 barrels, as shown in the following table:—

Daily Capacity of Completed Plants, 1916.

	Active.		Idle.		Total.	
	No.	Capacity	No.	Capacity	No.	Capacity
Nova Scotia. Quebec. Ontario. Manitoba. Alberta. B. Columbia.	2 7 2 2 2 2	14,800 10,950 3,725 4,000 5,000	9 2	140 1,800 8,900 3,500 600 14,940	2 4 3	140 16,600 19,850 3,725 7,500 5,600

The completed plants are distributed as follows: one in Nova Scotia, using blast furnace slag; three in Quebec, using limestone and clay; sixteen in Ontario, of which ten use marl, and six, limestone; two rock plants in Manitoba, one of which makes a "natural portland;" four in Alberta including one marl plant at Marlboro, and three limestone plants. During the year the plant at Marlboro was remodelled to use limestone, but was not expected to be in operation until 1917. In British Columbia there are three rock plants.

A comparison of the principal statistics of 1916 and 1915 showing the increase or decrease, as the case may be, is given in the next table.

In 1916 the sales exceeded the output, and quantity held in stock at the end of the year showed a decrease of 618,086 barrels, as compared with 1915. The average price per barrel at the mills for all plants, with the exception of those in Manitoba, has been steadily falling, being \$1.22 in 1916, as against \$1.23 in 1915; \$1.28 in 1914; \$1.27 in 1913; \$1.27\frac{3}{4}\$ in 1912; and \$1.34 in 1911. The average price at the mills in the several provinces was: Quebec, \$1.17 in 1916; and \$1.18 in 1915; Ontario, \$1.04 in 1916, and \$1.08 in 1915; Manitoba, \$1.86 in 1916, and \$1.84 in 1915; Alberta, \$1.73 in 1916, and \$1.78 in 1915; British Columbia, \$1.53 in 1916, and \$1.70 in 1915.

The imports of cement in 1916 showed a decrease in quantity of about 27 per cent. from the imports in 1915, while the average price fluctuated from \$1.61 in 1913 to \$1.50 in 1914; \$1.43 in 1915, and \$1.54 in 1916.

Comparison of Production, Sales, and Imports of Portland Cement in 1915 and 1916.

	1915.	1916.	Increase.	Per cent.	Decrease.	Per cent.				
Cement sold or used	5,681,032 5,153,763 2,620,022 2,062,961	5,369,560 4,753,033 2,072,266 1,444,875		• • • •	311,472 400,730 547,756 618,086	5·5 7·8 20·9 29·9

Total consumption of cement in CanadaBls	5,709,222	5,390,156			319,066	5.6				

Of the total cement made in 1916, 164,436 barrels were made from marl and 4,588,597 barrels from limestone, whereas in 1915 the quantity made from marl was 429,268 barrels, and 4,724,495 barrels from limestone. In 1914, 641,869 barrels were made from marl and 8,085,400 barrels from limestone and slag. Practically all of the newer plants erected during the past few years are limestone plants.

The proportion of cement made from marl and limestone since 1911 is shown in the following table:—

- Year.	Cement from	n Marl.	Cement from tone.	Lime-
vear.	Quantity.	%	Quantity.	%

Imports and Exports.—The quantity of cement exported is not recorded but the value in 1916 is reported as \$2,424, as against a value of exports in 1915 of \$5,161, and \$2,223 in 1914.

The imports of cement previous to 1901 were larger than the Canadian production, but gave way steadily to the increasing domestic output until 1909, during which year the imports amounted to 142,194 barrels, or about 3 per cent of the Canadian consumption. From 1910 to 1912 inclusive, there was a steady increase in the importation of cement, the imports in 1912 being 1,434,413 barrels. During four and one-half months of 1912 the duty was, on account of the scarcity in western Canada, reduced by one-half, and on May 31, 1913, a permanent reduction was made in the general tariff from 12½ cents to 10 cents per hundred pounds. The imports, however, have fallen to 254,093 barrels in 1913, 98,022 barrels in 1914, 28,190 barrels in 1915, and 20,596 barrels in 1916.

The United States has been the principal source of imports during the past few years supplying all imports in 1916 and over 96 per cent of the 1915 imports. During the latter year about 4 per cent was derived from Great Britain. In 1914 about 71 per cent and in 1913, 68 per cent of the imports were from the United States.

The imports of cement during 1915 and 1916 by countries are shown in the next table:—

290

Imports of Cement 1915 and 1916.

	1915.				1916.			
	Cwt.	Per cent.	Value.	Average value.	Cwt.	Per cent.	Value.	Average value.
Great Britain United States	3,726 94,938		\$ 1,480 38,946	\$0·40 0.41	72·083	·i0	\$ 5 31·616	\$1.25 0.44
Total Equivalent in barrels of 350 lbs	98,664 28,190	100.0	40,426		72·087 20,596	100.0	31.621	0.44

A permanent revision of the cement duties was made in the early part of 1913, and from May 13, 1913, the cement duties have been as follows:—

	British Preferential tariff.	Intermediate tariff.	General tariff.
Cement, portland, and hydraulic or water lime, in barrels, bags, or casks, the weight of the package to be included in the weight for duty per hundred pounds	7 cents	10 cents 20 per cent	

This is equivalent to a duty under the general and intermediate tariffs of 35 cents per barrel on cement, and 8 cents on the bags, or a total of 43 cents per barrel.

Statistics of the exports of cement since 1891, and of imports since 1880, are given in the next two tables:—

^{*} Cement not elsewhere specified and manufactures of cement. † From 1912 included in portland cement.

Consumption of Cement.—The consumption of cement is represented. practically by the domestic production, together with the imports, the exports being so comparatively small as to be negligible. The total consumption of cement in Canada in 1916 was 5,390,156 barrels (943,277 tons), made up of 5,369,560 barrels (939,673 tons), of Canadian cement, and 20,596 barrels (3,604 tons) of imported cement, the Canadian cement representing 99.6 per cent, and the imported cement 0.4 per cent of the total.

In 1915 the total consumption of cement was 5,709,222 barrels (999,114 tons), made up of 5,681,032 barrels (994,181 tons), of Canadian cement and 28,190 barrels (4,933 tons) of imported cement, the Canadian cement representing 99.5 per cent, and the imported cement, 0.5 per cent of the total.

In 1914 the total consumption of cement was 7,270,502 barrels (1,272,-338 tons), made up of 7,172,480 barrels (1,255,184 tons) of Canadian cement, and 98,022 barrels (17,154 tons) of imported cement, the Canadian cement representing 98.7 per cent, and the imported cement 1.3 per cent of the total.

Nova Scotia.—There is but one cement plant in Nova Scotia, located at Sydney and operated by the Sydney Cement Company, Limited. Puzzolan cement is made from blast furnace slag and lime. This plant has not been operated for two years.

Quebec.—This Province has three completed cement mills, all operated by the Canada Cement Company, Limited; two situated near Montreal, one at Longue Pointe, which has been idle throughout the year, and one at Montreal East, and the third at Hull. The Montreal mills have now a combined daily capacity of 13,800 barrels and the Hull mill 2,800 barrels. The total quantity of cement sold or used by producers during 1916 in this Province was 2,150,475 barrels, valued at \$2,525,863, as compared with 2,390,724 barrels, valued at \$2,812,797 in 1915.

Ontario.—Ontario continues as the most important cement-producing province in Canada, having sixteen completed plants with a total daily capacity of 19,850 barrels at the end of 1916. Of these four limestone and three marl plants were operated during the year. The nine idle mills included one limestone and eight marl plants. The names of the operating companies and location of plants are shown in an accompanying list of producers.

The total sales of cement in Ontario during 1916 were 2,230,386 barrels valued at \$2,312,677, as compared with 2,407,670 barrels valued at \$2,597,807 in 1915. There was thus a decrease in sales of 177,284 barrels, or over 7 per cent.

The detailed statistics of production during 1916 and 1915 are shown in the next table.

Cement Production in Ontario, 1915 and 1916.

Manitoba.—The Commercial Cement Company of Winnipeg, is operating a natural portland cement plant at Babcock, 75 miles southwest of Winnipeg, on the Canadian Northern Railway. The capacity of the plant is reported as about 225 barrels per day. The mill of the Canada Cement Company near Winnipeg has a daily capacity of 3,500 barrels. Limestone is obtained from a property in township 28, range 10, west of the first meridian, about 130 miles north of Winnipeg, on the Oak Point branch of the Canadian Northern railway.

Alberta.—This Province possesses four completed cement plants with a total daily capacity of about 7,500 barrels, located respectively at Exshaw, Calgary, Blairmore, and Marlboro. The first three are limestone plants, and the last was remodelled during the year and changed from marl to rock.

In addition to the completed plants, there are two other rock plants on which construction work has been suspended, viz: One at Blairmore owned by the Keystone Portland Cement Company, and one at Dauntless, near Medicine Hat, owned by the Canada Cement Company; the latter plant is being planned for a capacity of 1,000,000 barrels per annum.

The total quantity of cement marketed by producers in 1916 was 275,727 barrels, valued at \$477,832, as against 233,648 barrels valued at \$415,009 in 1915.

British Columbia.—The two plants on Vancouver Island were in operation during 1916, one for a short period only. The Vancouver Portland Cement Company's mill at Tod Inlet has a daily capacity of 3,000 barrels. The mill of the Associated Cement Company (Canada), Ltd., successors to the Portland Cement Construction Company, Ltd., at Bamberton, has a daily capacity of about 2,000 barrels. In both cases the limestone, shale, and clay are obtained in the vicinity of the works.

The plant at Princeton constructed by the British Columbia Portland Cement Co., Ltd., capacity averaging 600 barrels daily, remained idle throughout the year.

The total sales of cement from British Columbia mills in 1916 were 285,679 barrels, valued at \$436,459, as compared with 309,436 barrels, valued at \$526.042 in 1915.

The production of cement in Ontario has already been shown separately, and the aggregate production in all other provinces during 1915 and 1916 is given in the next table.

CLAY AND CLAY PRODUCTS.1

For a number of years a small quantity of fireclay has been produced and sold as such, and during the past five years there has been a small, but increasing production of kaolin, or china-clay from a deposit in the Province of Quebec. With these exceptions, practically all of the clay production in Canada consists almost altogether of the manufactured product.

The clay products made in Canada comprise brick of various kinds, including common and pressed, ornamental and fancy building brick, paving brick, firebrick, porous fireproofing brick and blocks, sewerpipe and drain tile, pottery and sanitary ware, the last two products chiefly from imported clays.

The total value of the clay products sold or marketed in 1916 was \$4,120,805, as compared with \$3,914,488 in 1915; \$6,871,957 in 1914; \$9,504,313 in 1913, and \$10,575,869 in 1912.

The production in 1916 showed a slight increase over 1915: \$206,317, or 5.3 per cent. It was but little over one-third the maximum production reached in 1912.

For a few years previous to 1913 the annual production of clay products increased very rapidly, having more than doubled in that period. In 1913, however, the financial stringency affected building operations to such an extent as to greatly reduce the demand for building brick. There was actually a considerable increase in the quantity of common and pressed building brick manufactured during the year, but a large falling off in sales, so that large stocks of brick must have remained in manufacturers' hands at the close of the year. In 1914 there was a large falling off both in quantities of brick made and in quantities sold, and the stocks of common and pressed brick on hand at the end of the year were reported as 242,106,000,

¹ Special investigations of the clay resources of Canada have been undertaken by the Department of Mines for a number of years and several special reports have been published thereon. The first work was undertaken by J. Walter Wells in 1905 under the direction of Dr. Haanel. In 1909, Dr. Heinrich Ries, Professor of Economic Geology in Cornell University was engaged by the Geological Survey to carry on a general investigation of Canadian clays. Mr. Joseph Keele of the Geological Survey was associated with Dr. Ries in the work which has been continued during the past five years.

The following reports have been published dealing with clays:—
Mines Branch, Department of Mines:

"Clays and Shales of Manitoba: Their Industrial Value." Report on. By J. Walter Wells, 1905.

(Out of print).

"Notes on Clay Deposits near McMurray, Alberta," by Sydney C. Ells B.Sc., (Bulletin No. 10), 1915.

Geological Survey Branch, Department of Mines:

"The Clay and Shale Deposits of Now Scotia, and Portions of New Brunswick." By H. Ries and J. Keele, 1911.

"Preliminary Report on the Clay and Shale Deposits of the Western Provinces." By H. Ries and J. Keele, 1912.

"The Clay and Shale Deposits of New Brunswick." By J. Keele, 1914.

"Clay and Shale Deposits of New Brunswick." By J. Keele, 1914.

"Clay and Shale Deposits of the Western Provinces, Part III." By Heinrich Ries, 1914.

"Clay and Shale Deposits of the Western Provinces, Part III." By H. Ries, 1915—Memoir No. 64.

"Clay and Shale Deposits of the Western Provinces, Part IV." By H. Ries, 1915—Memoir No. 65.

"Clay and Shale Deposits of the Western Provinces, Part IV." By J. Keele, 1915—Memoir No. 66.

or about 44 per cent of the number sold during the year. In 1915, there was again a large decrease both in quantity of brick made and in quantities sold. Sales, however, exceeded actual output, stocks having been depleted to a considerable extent to supply demand. Stocks of common and pressed brick on hand at the end of the year were reported as 147,817,000, or about 61 per cent of the stocks reported at the end of 1914. All classes of clay products showed a falling off in production, with the exception of firebrick, pottery and kaolin.

During 1916, however, the total quantity sold was about the same as that manufactured, while stocks of common and pressed brick held on hand at the close of the year, fell to slightly over 100,000,000 and all classes of clay products showed increased sales.

The average number of men employed in 1916 was 4,164 as compared with 4,405 of the previous year, and total wages paid were \$1,740,900, as against \$1,452,828 in 1915.

Of the total value of the sales in 1916, building and paving brick, including fireproofing, contributed \$2,732,000, or about 66·3 per cent, as against \$2,571,153, or about 65·6 per cent of the total in 1915. Sewerpipe and tile production in 1916 were valued at \$1,075,674, or 26·1 per cent of the total, as against \$1,154,742, or 29·5 per cent of the total in 1915. The total value of the production of pottery in 1916 was reported as \$391,173, of which \$61,069 only is estimated as attributable to Canadian clays and the balance to imported clays. Compared with the previous year the production of building, paving and fireproofing brick shows an increase of 6·3 per cent, and the production of sewerpipe and tiles, a decrease of 6·8 per cent.

The value of the production of fireclays and firebrick from domestic clays was \$234,562, as against \$110,693 in 1915. The production of kaolin in 1916 was 1,750 tons, valued at \$17,500, as against 1,300 tons, valued at \$13,000 in 1915.

The average price of common building brick for the whole of Canada in 1916 was \$7.71 per M, as compared with \$7.48 per M in 1915; \$7.99 in 1914; \$8.85 in 1913; \$9.11 in 1912; \$8.37 in 1911; and \$8.13 in 1910. The average prices of pressed, or front brick for the same years were respectively: \$10.95; \$9.89; \$11.91; \$12.40; \$12.86; \$12.53, and \$11.89, thus showing a general increase in the cost of building brick until 1912, falling off again in 1913, 1914, 1915, with a higher price ruling again in 1916.

Ontario is by far the largest producer of clay products, having contributed in 1916 over 52 per cent of the total values marketed during the year as against nearly 58 per cent of the total values marketed during 1915.

Quebec contributed 24·1 per cent in 1916, as against 23·5 per cent in 1915; Alberta 5·5 per cent in 1916, as compared with 2·9 per cent in 1915; Manitoba 2·5 per cent in 1916, as against 2·4 per cent in 1915; and

British Columbia 7·1 per cent in 1916, as compared with 5·8 per cent in the previous year.

Nova Scotia contributed 5.8 per cent of the total values marketed

during 1916, as against 5.7 per cent in 1915.

The following tables of production and of imports of clay products furnish comparisons of particular interest. In the first place an estimate of the value of consumption of clay products is furnished.

The total value of the imports in 1916 was \$4,554,167 (not including certain items probably in part covering clay products), and after deducting a small export, a total approximate consumption of clay products valued at \$8,594,860 is shown, of which 48 per cent was of domestic production.

In 1915 the approximate consumption was valued at \$6,867,381 of

which 57 per cent was of domestic production.

In 1914 the approximate consumption was valued at \$11,291,024, of

which about 61 per cent was of domestic production.

In 1913 the consumption was valued at \$16,212,733, of which 58.6 per

cent was of domestic production.

In 1912 the consumption was valued at \$17,149,659, in 1911, \$13,516,477, in 1910, \$11,958,591, and in 1909, \$9,696,324. In 1909, about 70 per cent of the consumption was of domestic production.

In the case of building brick, the imports are small compared with the home production, amounting to not much more than 5 per cent of the latter. The imports of paving brick in 1916 were more than double, and those of firebrick about twelve times the Canadian production. The imports of drain tile and sewerpipe were about 4 per cent of the Canadian production.

Statistics of production in 1916 and 1915 of the several classes of clay

products by provinces are shown in the following tables:-

Exports and Imports.—The total value of the exports of clay products in 1916 was \$80,112, and included 1,746,000 building brick, valued at \$13,942; manufactures of clay valued at \$58,550, and earthenware valued at \$7,620.

In 1915 the total value of the exports of clay products was \$45,572, which included 1,115,000 building brick, valued at \$9,089; manufactures of clay valued at \$25,202, and earthenware valued at \$11,281.

The imports of clays and clay products reached a total value during the calendar year 1916 of \$4,554,167, which exceeded the domestic production by \$433,362. The total imports in 1915 were valued at \$2,998,463.

Clay imports are classified by the Department of Customs under three main subdivisions, including: brick and tile, earthenware and china ware, and clays. The imports of clays in 1916 were valued at \$325,494, and included chiefly china-clay and fireclay with a small quantity of pipe-clay, and other clays not classified. The value of china-clay imported was \$114,110, and of fireclay \$187,124. In 1915 the total value of the imports of clays was \$237,096, and included china-clay valued at \$124,658, and fireclay at \$87,267. The imports of these clays have varied considerably from year to year, the imports of china-clay in 1914 and fireclay in 1916 being the highest recorded.

The imports classified under brick and tile were valued in 1916 at \$2,048,259, as compared with a value of \$1,301,359 in 1915. A large portion of these imports is made up of firebrick, over 80 per cent in 1916. There is also a considerable import of building and paving brick, of sewerpipe and drain tile, and of building blocks, and manufactures of clay not specified.

The imports of earthenware and chinaware, of which the most important class is tableware, were valued in 1916 at \$2,180,414, as against \$1,460,010 in 1915. These imports are chiefly of a class of goods not manufactured in Canada and for which the raw materials are not as yet obtainable from Canadian sources.

The detailed record of imports during the calendar years 1911 to 1916 is shown in the next table.

Imports of Clay Products, Calendar Years, 1911 to 1916.

(a) Nine months. (b) Included in manufactures of clay, n.o.p.

In addition to the imports of clay products, there is also shown in the preceding table a considerable annual importation of "chalk, china or cornwall stone, cliff stone and feldspar, fluorspar, magnesite, ground or unground", much of which is, no doubt, used in connexion with the manufacture of clay products. The value of these imports during the calendar year 1916 was \$170,498, of which \$124,948 was from the United States, and \$45,550 from Great Britain. The value of the imports under this item during the calendar year 1915 was \$100,012. There is also shown an annual importation of "baths, bath-tubs, basins, closets, lavatories, urinals, sinks, and laundry tubs of any material", the value of such imports during 1916 being \$173,244, as compared with \$182,757 during the year 1915.

Imported clay products are derived chiefly from Great Britain and the United States, although considerable quantities of earthenware, china and porcelain ware, white granite or iron-stoneware, etc., are brought from France and Japan. The imports during the fiscal year ending March 31, 1916, showing the country of origin, are shown in the next table. Of the brick and tile imported 88·3 per cent was from the United States and 11·6 per cent from Great Britain; and only \$449 worth from all other countries. Of the earthenware and chinaware, 64·4 per cent was imported from Great Britain, 20·1 per cent from the United States; 7·0 per cent from France; and 7·7 per cent from Japan. The crude clays were imported principally from Great Britain and the United States.

CLAY BUILDING BRICK.

The total sales from Canadian plants of clay building brick including common and pressed brick, but excluding ornamental, paving, firebrick, and fireproofing brick, are shown by provinces for the past four years in the tables following.

In 1916 the total sales were 281,981,764, valued at \$2,319,199, made up of 237,034,675 common brick, valued at \$1,826,844, or an average value of \$7.71 per thousand, and 44,947,089 pressed brick, valued at \$492,355, or an average value of \$10.95 per thousand. In addition to these, there was a production of ornamental brick valued at \$21,102, and a production of fire-proofing brick, valued at \$361,555.

In 1915 the total sales were 284,550,042, valued at \$2,247,961 made up of 234,732,882 common brick, valued at \$1,755,187 or an average value of \$7.48 per thousand, and 49,817,160 pressed brick, valued at \$492,774, or an average value of \$9.89 per thousand. The production of ornamental brick was valued at \$49,097, and fireproofing brick, valued at \$253,401.

In 1914 the total sales were 551,148,620, valued at \$4,769,417, made up of 457,513,762 common, valued at \$3,653,861, or an average value of \$7.99 per thousand, and 93,634,858 pressed brick, valued at \$1,115,556, or an average value of \$11.91 per thousand. There were also 1,554,496 ornamental brick produced, valued at \$23,592, and fireproofing brick and architectural terracotta valued at \$405,543.

Large stocks of bricks were reported as being in manufacturers' hands at the close of 1915, the total number being 147,817,000 brick, or equivalent to 52 per cent of the year's sales. Stocks at the end of 1916 were reduced to 101,657,000 equivalent to 36 per cent of the year's sales.

The record of stocks on hand by provinces is shown in the following table:—

The exports of building brick since 1891, and the imports since 1880, are shown in the following tables. The exports have never been large, averaging for a number of years, about \$6,000 per annum. The exports fell off somewhat from 1909 to 1911, but increased again to a value of \$11,871 in 1914, \$9,089 in 1915, and \$13,942 in 1916.

The annual imports for a number of years previous to 1903 averaged only about \$20,000 in value; during the past ten years however, the imports have rapidly increased from \$100,000 to over \$760,000 in 1912. During the calendar year 1916 the imports were 10,083,000 brick, valued at \$118,687, of which 133,000, valued at \$2,351, or an average of \$17.67 per thousand were imported from Great Britain, and 9,950,000, valued at \$116,336, or an average of \$11.69 per thousand from the United States. The imports during the calendar year 1915 were 10,168,000 brick, valued at \$114,958, of which 375,000, valued at \$4,592, or an average value of \$12.24 per thousand, were imported from Great Britain, and 9,793,000, valued at \$110,366, or an average value of \$11.27 per thousand, from the United States.

Prices.—The price of brick varies greatly with the quality, locality, market, or demand. The values, as given in the table of production, are those at the yard or kiln and do not include costs of delivery. They do not, therefore, represent the price to the consumer. The average price of common brick at the kiln in 1916, according to these returns was \$7.71 as compared with \$7.48 in 1915, \$7.99 in 1914, \$8.85 in 1913, and \$9.11 in 1912; and of pressed brick \$10.95 in 1916, as compared with \$9.89 in 1915, \$11.91 in 1914, \$12.49 in 1913, and \$12.86 in 1912.

In the Maritime Provinces during 1916 the price of common brick varied from \$7.50 to \$12.00, averaging for Nova Scotia \$7.49, and for New Brunswick \$10.23. In Quebec, the price of common brick varied between \$5.50 and \$9.00, averaging \$7.03, while the price of pressed brick averaged \$17.17. The average price of common brick in Ontario was \$7.87, and pressed brick was \$10.17. In all the western provinces, common brick ranged from \$8.00 to \$11.50, averaging \$10.26 in Manitoba, \$8.71 in Saskatchewan, \$8.20 in Alberta, and \$8.23 in British Columbia. Pressed brick ranged from \$9.62 to \$25.00 in individual yards, averaging \$18.95 in Manitoba, \$15.32 in Saskatchewan, \$11.35 in Alberta, and \$18.62 in British Columbia.

The following table shows the average values at the kilns, of common and pressed brick, during 1914, 1915, and 1916, as furnished by the producers.

Average Prices per Thousand of Common and Pressed Brick.

PRODUCTION OF BRICK BY PROVINCES.

Nova Scotia and New Brunswick.—The total sales in Nova Scotia were 8,108,000 brick, valued at \$63,548, as compared with sales of 6,562,000 brick, valued at \$50,184 in 1915. The chief sources of production were: Pugwash, Elmsdale, New Glasgow, Wallace Bridge, and Płymouth.

The total sales in New Brunswick were 4,140,074 brick, valued at \$42,781, as compared with 3,715,000 brick, valued at \$35,030 in 1915, the principal points of production being: Fredericton, St. John, Lewisville,

St. Leonard, Bathurst, and Grafton.

Quebec.—The total sales of brick in Quebec in 1916 were: 97,410,490, valued at \$723,178, comprising 93,668,357 common brick, valued at \$658,909, or \$7.03 per thousand, and 3,742,133 pressed brick, valued at \$64,269, or \$17.17 per thousand.

The sales in 1915 were 83,735,065, valued at \$628,851, comprising 79,744,548 common brick, valued at \$566,085, or \$7.10 per thousand, and

3,990,517 pressed brick, valued at \$62,766, or \$15.73 per thousand.

While brick-making is carried on at many places in the Province, the principal plants are located at Montreal, Laprairie, Sherbrooke, Quebec,

Montmorency Falls, and Deschaillons.

Ontario.—This Province is credited in 1916 with over 52 per cent of the brick production of Canada, the total sales as reported by 205 firms, being 141,135,685 brick, valued at \$1,196,315, including 103,854,020 common brick, valued at \$817,321, or an average of \$7.87 per thousand, and 37,281,665 pressed brick, valued at \$378,994, or an average of \$10.17 per thousand.

The total sales in 1915 were 167,481,848 brick, valued at \$1,308,767, and included 123,977,112 common brick, valued at \$910,459, or an average of \$7.34 per thousand, and 43,504,736 pressed brick, valued at \$398,308,

or an average of \$9.16 per thousand.

The city of Toronto and vicinity, including the counties of York, Peel, and Halton, is the principal brick-making section, and in 1916 produced about 58 per cent of the Ontario production, or about 30 per cent of the total Canadian production of brick. The county of Wentworth, comprising the city of Hamilton and vicinity, produced about 13 per cent of the Ontario production.

The greater part of the pressed brick reported as such was made in the

Toronto and Hamilton districts.

The production by principal counties in 1915 and 1916 is shown in the accompanying tables:—

(a) Not separately stated.

In addition to the ordinary clay-building brick, there were produced in this Province, in 1916, ornamental brick, valued at \$17,102, and fire-proofing valued at \$218,345. In 1915 the production of ornamental brick was valued at \$12,140, and of fire-proofing and terra cotta \$41,040.

Manitoba.—All the western provinces showed an increase in brick sales. In Manitoba the total sales were 9,021,744 valued at \$93,448, as compared with sales in 1915 of 8,630,411, valued at \$87,194. Stocks on hand at the end of December 1916 were reported as 6,017,000 brick. The principal brick-making plants are at Winnipeg, St. Boniface, Lac du Bonnet, Portage la Prairie, Sidney, Balmoral, Learys, and Neepawa.

Saskatchewan.—The total sales of clay-building brick in Saskatchewan in 1916 were 7,181,145, valued at \$65,376, as against sales in 1915 of 4,607,045, valued at \$43,601. Stocks on hand at the end of 1916 were 3,502,000. The principal clay plants operated were at Estevan, Shand, Prince Albert, Arcola, Meota, Clay Bank, Pilot Butte, Verigin, and Broadview.

Alberta.—The total sales of clay-building brick in 1916 were 10,148,211, valued at \$98,782, as compared with sales in 1915 of 5,094,301, valued at \$45,649, and stocks on hand at the end of 1916 amounted to 6,919,000 brick. In addition to ordinary building-brick, there was a production of fireproofing brick, valued at \$53,334, as compared with \$30,263 in 1915. The principal centres of production were: Edmonton, Medicine Hat, Redcliff, Lethbridge, and Sandstone.

British Columbia.—The total sales of brick in this Province in 1916 were reported as 4,836,415, valued at \$41,771, as against sales in 1915 of 4,724,372, valued at \$48,685, while stocks on hand at the end of the year were 6,936,000 brick. There was also a production of fireproofing brick, valued at \$6,839, as against a value of \$24,983 in 1915. The principal centres of brick manufacture were: Grand Forks, Clayburn, Kilgard, Port Haney and vicinity, Victoria, Sydney, and East Wellington.

CLAY-PAVING BRICK.

The total production of paving bricks and paving blocks in Canada in 1916 was reported as 1,589,893, valued at \$30,144, or an average value of \$18.96 per thousand, as compared with 1,227,647 valued at \$20,694, or an average value of \$16.85 per thousand in 1915.

This paving brick is made chiefly at West Toronto, Ontario, from shale obtained from the banks of the Humber river, although during the past three years there has also been a small production reported from Clayburn, British Columbia.

The annual production has, for a number of years, varied from 3,000,000 to over 5,000,000 per season; and the Ontario output finds a market chiefly in Toronto.

Statistics of production since 1897 are shown in the next table.

The imports of paving brick during the past five years have considerably exceeded the domestic production. During the calendar year 1916 the imports were: 5,667,000, valued at \$70,268, or an average value of \$12.40 per thousand, and included: 4,772,000 valued at \$57,524, or an average of \$12.05, from the United States, and 895,000, valued at \$12,774, or an average of \$14.24 from Great Britain.

The total imports during the calendar year 1915 were 5,865,000, valued at \$76,759, or an average value of \$13.09 per thousand, and included 4,747,000, valued at \$61,468, or an average of \$12.95 from the United States, and 1,118,000, valued at \$15,291, or an average value of \$13.68 from Great Britain.

FIRECLAY AND FIRECLAY PRODUCTS.

There are a number of clays from different parts of Canada that have been used in the manufacture of refractory brick, or firebrick, and for furnace linings, etc., which have been usually termed "fireclays." These include clays found with the coal measures at Westville, Sydney Mines, and North Sydney, N.S., and at Comox, V.I., also clays found south of Moosejaw, at Claybank, Sask., at Clayburn, near the city of Vancouver, B.C., and at Kilgard, B.C. Stove linings and other refractory clay products are made at several places in Ontario and Quebec from imported clays.

The total value of the sales of fireclay, firebrick, and fireclay products in 1916 was \$234,562, as compared with a valuation of \$110,693 in 1915. There was, in addition, in 1916, a production of fireclay products valued at \$22,484 reported as being made from imported clays.

The production in 1916 included fireclay, or refractory clay sold as such, 9,206 tons, valued at \$30,767; firebrick 5,688,511, valued at \$147,757, or an average of \$25.97 per thousand; and other fireclay products valued at \$56,038.

The production in 1915 included fireclay and refractory clay sold as such 2,328 tons, valued at \$12,065; firebrick 2,895,640, valued at \$68,700, or an average of \$23.73 per thousand; and other fireclay products valued at \$29,928.

The imports of firebrick during the calendar year 1916 were valued at \$1,657,792, of which \$1,495,868 was from the United States, and \$161,924 from Great Britain.

The imports of firebrick during the calendar year 1915 were valued at \$813,071, of which \$718,299 was from the United States, \$93,926 from Great Britain, and \$846 from other countries.

Fireclay was imported during the calendar year 1916 to the value of \$187,124, as compared with a value of \$87,267 in 1915; \$90,233 in 1914; and \$143,399 in 1913.

Statistics of the annual production since 1907 of firebrick, refractory clay or fireclay, sold as such, and of fireclay products; and statistics of the imports of firebrick and fireclay are shown in the following tables:-

SEWERPIPE AND DRAIN TILE.

The total value of the sales of sewerpipe in 1916 was \$716,287, as compared with a value of \$799,446 in 1915, \$1,104,499 in 1914, and \$1,035,906 in 1913. About 45 per cent of the production in 1916 was made in Ontario.

Following is a list of firms reporting production of sewerpipe in 1916:-

Standard Clay Products, Limited, St. Johns, Que., and New Glasgow, N.S. Standard Clay Products, Limited, St. Johns, Que., and New Ontario Sewerpipe Company, Mimico, Ont. Dominion Sewerpipe Company, Swansea, Ont. Hamilton and Toronto Sewerpipe Company, Hamilton, Ont. Alberta Clay Products Company, Medicine Hat, Alta. Kilgard Fireclay Company, Kilgard, B.C. The Clayburn Company, Limited, Clayburn, B.C. British Columbia Pottery Company, Victoria, B.C.

The imports of drainpipe and sewerpipe during 1916 were valued at \$40,233, of which \$30,814 were imported from the United States, and \$9,419 from Great Britain.

The total imports during 1915 were valued at \$41,801, of which \$28,496 were imported from the United States, and \$13,305 from Great Britain.

The total sales of drain tile in Canada in 1916 as reported to this Branch were valued at \$359,387, as compared with sales of \$355,296 in 1915 and \$366,340 in 1914. The greater part of this production is in Ontario; the sales in this Province as reported by the producers being 20,205,837, valued at \$343,677, as against 18,812,712, valued at \$341,467 in 1915.

The Ontario Bureau of Mines reports the total number of drain tile made in that Province during 1916, as 16,562,000, valued at \$302,080, or an average of \$18.24 per thousand, as compared with 17,837,000, valued at \$321,253, or an average of \$18.01 per thousand in 1915.

The imports of unglazed tile are comparatively small, the value during the calendar year 1916 being \$2,072, as compared with \$346, in 1915, and \$2.941 in 1914.

Statistics of the annual production of sewerpipe and of the imports of drain tile and sewerpipe, are shown in the next three tables:—

Production of Sewerpipe.

(a) Drain tile, not glazed.
(b) Drain pipes, sewerpipe, and earthenware fittings therefor, chimney linings, or vents, chimney tops and inverted blocks, glazed or unglazed.

POTTERY AND EARTHENWARE.

The pottery made from Canadian clays has been, hitherto chiefly of the common grades, such as flower pots, jardinières, crocks, jars, churns, etc. A number of potters made a higher grade product of stoneware, but the majority of these used imported clays. Sanitary ware is made at St. Johns, Que., and at other points, but the raw material, including clays and feldspar, is nearly all imported.

The total value of the production of pottery and clay sanitary ware in 1916, according to returns received, was \$391,173, of which it is estimated that a value of \$330,104 is attributable to imported clays. The total value of the production in 1915 was \$317,080, of which a value of \$252,180 was credited to imported clays.

Annual statistics of production are shown herewith:

Annual Production of Pottery.

Calendar Year.	Value.	Calendar Year.	Value.	Calendar Year.	Value.
1888	Not available	1898 1899 1900 1901 1902 1903 1904 1905 1906 1907	185,000 200,000 200,000 200,000 200,000 140,000 120,000	1909. 1910. 1911. 1912. 1913.	\$200,541 285,285 250,924 102,493 43,955 53,533 35,371 64,900 61,069

Details of the imports of earthenware and chinaware showing the values imported and the countries of origin, have already been shown in the general table of imports.

The imports in 1916 were valued at \$2,180,414, as compared with a value \$1,460,010 in 1915; \$2,192,222 in 1914; and \$3,314,870 in 1913. These imports are subdivided into eight classes, and in 1916 included: Brown or coloured earthenware, etc., \$145,490; C.C., or cream-coloured ware, decorated, printed, sponged, etc., \$176,329; demijohns, churns, or crocks, \$16,632; tableware of china, porcelain, white granite, etc., \$1,566,312; china and porcelain ware, n.o.p., \$17,304; tiles or blocks of earthenware or stone prepared for mosaic flooring, \$41,189; earthenware tiles, n.o.p., \$74,293; manufactures of earthenware, n.o.p., \$142,865.

The imports in 1915 included: Brown, or coloured earthenware, etc., \$74,864; C.C. or cream-coloured ware, decorated, printed, sponged, etc., \$135,425; demijohns, churns, or crocks, \$14,752; tableware of china, porcelain, white granite, etc., \$1,016,900; china and porcelain ware, n.o.p., \$18,312; tiles, or blocks of earthenware, or stone prepared for mosaic flooring, \$40,286; earthenware tiles, n.o.p., \$92,700; manufactures of earthenware, n.o.p., \$66,771.

It will be observed that there has been a large decrease in all but two classes of earthenware and chinaware imported in 1916. Great Britain is the principal source of the imports of this class of products, but quite large supplies are also obtained from the United States, France, Japan, and other countries.

KAOLIN.

The shipments of kaolin in 1916 were 1,750 tons, valued at \$17,500, as compared with 1,300 tons, valued at \$13,000 in 1915.

The production was obtained from the deposits in the township of Amherst, Ottawa county, Quebec, operated by the Canadian China Clay Company of Montreal, and since the beginning of operations, has been as follows:—

Annual Production of Kaolin.

Year.	Tons.	Value.	Average.
1912	500 1,000 1,300	\$ 160 5,000 10,000 13,000 17,500	\$ 8.00 10.00 10.00 10.00 10.00

The plant for refining the clay is situated 2 miles from St. Remi d'Amherst, and 7 miles from Huberdeau, the terminus of the Montfort Branch of the Canadian Northern Quebec railway—46 miles northwest of Montreal.

The imports of china-clay, ground and unground, into Canada during the twelve months ending December 1916, were 19,062 tons, valued at \$114,110, or \$5.99 per ton, as against imports of 21,940 tons, valued at \$124,658, or \$5.68 per ton in 1915.

The imports of earthenware and chinaware, as already noted, were valued at \$2,180,414 in 1916, \$1,460,010 in 1915, \$2,192,222 in 1914, and \$3,314,870 in 1913, and consist chiefly of tableware of china, porcelain, etc.

LIME.

The production of lime which in 1916 amounted to 5,493,250 bushels (equivalent to about 192,264 tons), valued at \$1,091,463, or an average of 20 cents per bushel, or \$5.75 per ton, shows an increase of 446,006 bushels, or 8·8 per cent over the 1915 production, of 5,047,244 bushels (equivalent to about 176,654 tons), valued at \$1,015,702, also an average of 20 cents per bushel.

In 1914 the production was 7,028,582 bushels (equivalent to about 246,000 tons), valued at \$1,360,628, an average of 19 cents per bushel, or \$5.53 per ton.

Returns were received from 76 firms in 1916, as compared with 78 firms in 1915. The average number of men employed in 1916 was 758, and wages paid \$381,365, as against 633 men employed and \$293,735 paid in wages in 1915. Statistics in respect to labour and wages in lime production, however, should be used with some discrimination, as many firms producing lime are also engaged in the quarrying of stone for purposes other than lime-burning, and are unable to make separate reports as to labour employed. This is particularly evident in the records from Nova Scotia and New Brunswick, since, for the first mentioned, the record includes only the labour employed at the kilns, while, for the latter, quarry costs are also included.

The average price per bushel of lime sold in 1916 varied from a minimum 18 cents in Ontario to a maximum 34 cents in British Columbia.

Over 84 per cent of the total production in 1916 was derived from Ontario, Quebec, and the Maritime Provinces, as against 88 per cent of the total from these provinces in 1915, 85 per cent in 1914, and 72 per cent in 1912.

The production of hydrated lime, amounting to a total of 9,137 tons, was reported by six firms, viz.: The Standard Lime Company, Limited, Joliette, Que.; The Standard White Lime Company, and The Ontario Reformatory at Guelph, The Elora White Lime Company, Limited, Elora, and The Contractors Supply Company, Limited, Orangeville, in Ontario; and the Pacific Lime Company, Limited, Blubber Bay, B.C.

Exports and Imports.—The value of the lime exported during the calendar year 1916 was \$66,406, the destination being mainly the United States. In 1915 the exports were valued at \$15,617. The imports of lime during the calendar year 1916 were 211,780 barrels (21,178 tons), valued at \$96,332, or an average of 46 cents per barrel, and were derived chiefly from the United States. The imports during 1915 were 189,774 barrels (18,977 tons), valued at \$98,040, or an average of 52 cents per barrel.

Annual statistics of exports and imports are given in the next two tables.

^{*}Duty 20 per cent.

The Province of Ontario is the principal lime producing province, having in recent years contributed from 30 to 42 per cent of the total output. In 1916 the contribution was 37 per cent of the total production.

Statistics of the annual production of lime in Ontario, as published by the Ontario Bureau of Mines since 1896, are shown in the next table. For the years previous to 1910 these returns are slightly higher than those obtained by the Mines Branch.

Annual Production of Lime in Ontario.

^{*}Preliminary.

SAND-LIME BRICK.

The first record of the production of sand-lime brick in Canada was obtained for the year 1907 when there was a production by ten firms amounting to 16,492,971 brick, valued at \$167,795.

In 1916 the sales were reported as 16,540,747 brick, valued at \$126,235, or an average of \$7.63 per thousand, as against sales in 1915 of 17,960,802 brick, valued at \$141,742, or an average of \$7.89 per thousand. During 1916 a decrease in sales is shown. Sales were made very largely from stock since the total number of brick made during the year was reported as only 13,884,400, while stocks at the end of the year amounted to 5,178,175 brick.

Annual Production of Sand-Lime Brick.

SAND AND GRAVEL.

The production of sand and gravel in Canada during 1916, according to returns received by this office, amounted to 8,156,207 tons, valued at \$1,838,320, showing an increase in quantity of 1,710,490 tons or 26.5 per cent, and an increase in value of \$213,553 or 13.1 per cent, as compared with the production reported for 1915.

The 1916 production included: building sand and sand for concrete and road building, etc., 1,379,319 tons, valued at \$475,811; gravel and crushed gravel, 553,125 tons, valued at \$162,250; sand and gravel, 1,505,775 tons, valued at \$605,280; railway ballast, 4,559,686 tons, valued at \$521,189; moulding sand, 19,251 tons, valued at \$16,726; and other sands (mostly engine sands), 139,051 tons, valued at \$57,064.

Previous to 1912, no attempt had been made by this department to obtain statistics of the production of building sand or of gravel in Canada. In 1912, however, a beginning was made, the returns received showing a production of sand and gravel valued at \$1,512,099.

For the year 1913 the collection was extended to include a record of the production of sand and gravel for railroad ballasting, but, at the time of closing the statistics, several important returns had not been received. However, the total value of the production as reported was \$2,258,874.

The total value of the production in 1914 as reported was \$2,505,310, but it is probable that the record was more complete than for the previous years, which doubtless accounts in large measure for the increase in production shown.

Production of Sand and Gravel, 1916.

Statistics of the exports and imports of sand and gravel, are published in the annual reports of the Department of Customs, and the following tables are compiled from this source since 1893. During 1916 there were exported from Canada 1,114,913 tons of sand and gravel, valued at \$388,309, while the imports were 233,777 tons, valued at \$183,894.

SLATE.

There is a small annual production of slate in Canada, obtained from the New Rockland quarries, Melbourne township, Richmond county, operated by Messrs. Frazer and Davies.

The production in 1916 was 1,262 squares, valued at \$6,223, as compared with a production in 1915 of 397 squares, valued at \$2,039, and of 1,075 squares, valued at \$4,837 in 1914.

^{*}From 1903, in squares; previously, in tons.

No exports of slate have been reported since 1896 with the exception of the years 1908 and 1909.

The imports of slate during the past twelve years ranged from \$90,000 to over \$200,000 per annum.

The total value of the imports during the calendar year 1916 was \$96,776, and included: roofing slate, 4,412 squares, valued at \$21,335; school writing slate, \$35,887; slate pencils, \$11,309; and other slates and manufactures of, \$28,245. The total value of the imports during the calendar year 1915 was \$108,676, and included: roofing slate, 7,483 squares valued at \$34,528; school writing slate, \$38,874; slate pencils, \$4,954; and other slates and manufactures of, \$30,320.

The imports of roofing slate, school writing slate, and manufactures of slate n.o.p., are chiefly from the United States. Some roofing slate is also imported from Great Britain, while slate pencils come chiefly from the United States.

STONE.1

Statistics of stone production given herewith include the sales of all classes of stone used for building, monumental, and ornamental purposes, stone for paving purposes, curbstone and flagstone, rubble, riprap, and crushed stone, limestone for furnace flux, sugar factories, etc., but stone used for burning lime or manufacturing cement is not included.

The kinds of stone quarried have been classed as granite (including trap rock, syenite, and other igneous rocks), limestone, sandstone, and

marble.

The records are practically confined to quarry operations, and to the production of sawn or polished stone when these operations are carried on by quarry operators. In addition to this production of stone by regular operators, there is no doubt a large stone production by individuals, such as farmers, and others, for house or barn foundations, concrete work, etc., of which it would be impracticable to obtain any satisfactory record. Much stone is also used in railway construction work and in road building, of which the record is probably very incomplete.

The total value of the production of stone in 1916, according to returns received was \$3,736,412, as compared with a value of \$4,244,997 in

1915, showing a falling off of \$508,585, or over 12 per cent.

The number of active firms reporting in 1916 was 198, the total number of men employed 4,020, and the total wages paid \$2,115,320. In 1915 the number of active firms reporting was 236, the number of men employed 5,144, and the total wages paid \$2,188,302.

Of the total value of the 1916 production, limestone contributed \$2,224,091, or 59.5 per cent; granite \$1,247,267, or 33.4 per cent; sandstone \$146,244, or 3.9 per cent; and marble \$118,810, or 3.2 per cent.

Stone was used for building purposes to the value of \$1,173,642, or 31.4 per cent of the total; monumental and ornamental to the value of \$183,086, or 4.9 per cent; curb, paving, and flagstone \$77,339, or 2 per cent; rubble 574,929 tons, valued at \$413,600, or 11.1 per cent; crushed stone 1,869,344 tons valued at \$1,408,515, or 37.7 per cent; and furnace flux 824,110 tons, valued at \$480,230, or 12.9 per cent.

By provinces, Quebec shows again the largest output, having a value of \$1,370,465, or 36.7 per cent of the total; being made up of limestone

¹A special investigation has been undertaken by the Mines Branch on the building and ornamental stones of Canada, by Prof. W. A. Parks, of Toronto University, and four reports of this series have been completed as follows:—
No. 100.
No. 203. "The Building Stones of Canada, Vol. I." "Building and Ornamental Stones of Ontario."
No. 203. "Building Stones of Canada, Vol. II." "Building and Ornamental Stones of the Maritime"

Provinces.
No. 279. "Building Stones of Canada, Vol. III." "Building and Ornamental Stones of the Province of Ouebec."

No. 388. "Building Stones of Canada, Vol. IV." "Building and Ornamental Stones of the Provinces Manitoba, Saskatchewan, and Alberta."

to the value of \$799,354, granite valued at \$422,297, marble \$118,810, and sandstone \$30,004. Ontario takes second place with a production of \$857,023, or about 23 per cent of the total, of which limestone is credited with \$688,114, granite \$135,826, and sandstone \$33,083. British Columbia ranks third in order of importance with a total of \$564,218, including granite \$464,949, sandstone \$6,500 and limestone \$92,769. The Nova Scotia production was valued at \$459,298, comprising limestone \$263,803, granite \$164,870, and sandstone \$30,625. In Manitoba the production, all of which was limestone, was valued at \$372,894. New Brunswick is credited with \$112,257, made up chiefly of granite and sandstone.

Exports and Imports.—The exports of stone from Canada in 1916 were valued at \$143,988, as against \$72,777 in 1915, and \$72,080 in 1914. The principal item in the export of stone during the past few years was building stone, unwrought, of which the exports in 1916 were 128,453 tons, valued at \$103,796. There was also an export of ornamental granite, marble, etc., unwrought, of 15,967 tons, valued at \$7,989; crushed stone 26,754 tons, valued at \$27,611, and dressed stone of all kinds valued at \$4,592.

The exports of the several classes of stone during the past three years as shown by the Customs record, were as follows:—

Exports of Stone during the Calendar Years 1914, 1915, and 1916.

The imports of stone are classified as: building stone of all kinds, except marble; refuse stone; manufactures of granite and other stone; and marble and its manufactures. The total value of the imports during the calendar year 1916 was \$587,304, as compared with a value of \$539,173 in 1915, showing a slight increase. The imports during 1916 comprised: building stone (rough), valued at \$68,939; building stone (dressed) \$43,410; granite and manufactures of granite \$133,229; marble and manufactures of, \$171,849; and refuse stone 363,682 tons, valued at \$169,877.

The total value of the imports from the United States in 1916 was

\$437,310; Great Britain \$90,100; Italy \$386; and from other countries \$59,508.

The imports during 1915 comprised: building stone (rough) valued at \$54,249; building stone (dressed) \$57,761; granite and manufactures of granite \$179,604; paving blocks \$584; marble and manufactures of, \$152,454 and refuse stone 269,912 tons, valued at \$94,521.

The total value of the imports from the United States in 1915 was \$401,612; Great Britain \$136,153; Italy \$483; and from other countries \$925.

During both years the imports were derived chiefly from the United States and Great Britain, the United States supplying building stone, paving blocks, marble, and refuse stone principally, and Great Britain mainly manufactures of granite. Marble was obtained also in small quantities from Italy and other countries.

GRANITE.

The production of granite, including trap-rock, syenite, etc., in 1916, according to returns received from 62 active firms was valued at \$1,247,267, as compared with a production in 1915 by 69 firms, valued at \$1,525,553, showing a decreased production in 1916 of \$278,286, or over 18 per cent.

The largest production is reported from British Columbia in 1916, the value being \$464,949, as against \$701,593 in 1915. The value of the production in Quebec was \$422,297, as against \$594,744 in 1915. produced granite to the value of \$135,826 in 1916, as compared with \$140,894 in 1915. Much of the rough stone quarried in New Brunswick, as well as stone imported from Redbeach, Maine, is worked up into finished ornamental and monumental stone in mills at St. George, N.B. The value of the finished stone produced at this point in 1916 was \$113,745, as against value of \$95,993 in 1915.

LIMESTONE.

The statistics given herewith do not include the value of the stone burned into lime by the quarry operators, nor that of the stone used in the manufacture, of cement, a record of lime and cement production being separately given. With these exceptions, the total value of limestone produced in Canada in 1916 was \$2,224,091, as compared with the value of \$2,312,081 in 1915, showing a slight decrease.

During 1916 the production of limestone for building purposes was valued at \$632,808, as against \$468,990 in 1915. The production of curbstone and paving stone was valued at \$1,673, as against \$27,539 in 1915. The production of rubble and riprap was 104,049 tons, valued at \$60,161, as against 155,961 tons, valued at \$102,250 in 1915. The production of crushed stone was 1,387,235 tons, valued at \$1,049,219, as against 1,828,365 tons, valued at \$1,279,480 in 1915. The production of furnace flux was 824,110 tons, valued at \$480,230, as against 814,854 tons, valued at \$433,822, in 1915.

MARBLE.

From 1886 to 1896 there was a small production of marble, aggregating, however, only \$45,837 in value for the eleven years. During the next eleven years—1897 to 1907—there is no record of any production, but the opening up of the quarries at Philipsburg, and South Stukely, Que., together with the development of quarries in Ontario, and British Columbia, has resulted in a considerable production of marble during the past nine years. The total value of the production in 1916 was returned as \$118,810 comprising: ornamental marble 1,034 tons, valued at \$103,400; and crushed 27,464 tons, valued at \$15,410; as compared with a total value of \$158,027 in 1915.

The imports of marble during the calendar year 1916, were valued at \$171,849, as compared with \$152,454 in 1915, and \$465,563 in 1914.

The annual imports of marbles since 1880 are shown in the general table of imports.

SANDSTONE.

The value of the production of sandstone in 1916 is reported as \$146,244, as compared with a value of \$249,336 in 1915. A large portion of the sandstone is quarried for building purposes, though large quantities are used for rubble and paving.

Of the production in 1916, building and ornamental stone was sold to the value of \$37,804, this amount, including rough stone valued at \$36,513, and dressed stone valued at \$1,291. The production of rubble and riprap in 1916 was 74,677 tons, valued at \$53,529, and of crushed stone 29,772 tons, valued at \$46,721.

Of the production in 1915, building and ornamental stone was sold to the value of \$52,066. There was included in this amount, rough stone, valued at \$40,401, and dressed stone valued at \$11,665. The production of rubble and riprap was \$91,531 tons, valued at \$147,032, and 20,015 tons of crushed stone, valued at \$28,147.
